

Environmental Assessment Worksheet

Grantee	Nelson Park Preservation Associates, LLC
Grant Number	N-B-22-9AA-1-22-0267
Activity Name	Nelson Park Apartments
Activity Location	1994 Maryland Avenue, Columbus, Franklin County, Ohio (43219)
The project involves the renovation of an existing 177-unit senior and multi-family apartment complex to create 56 senior and 84 multi-family housing units, and the adaptive reuse of three existing apartment buildings to create a new community building, new management offices, and a new maintenance garage	
Determination: <input checked="" type="checkbox"/> <u>Finding of No Significant Impact (FONSI)</u> , whereby the Responsible Entity may proceed to Dissemination and publication of the FONSI, per regulations found at 24 CFR Section 58.43(a). <input type="checkbox"/> <u>Finding of Significant Impact</u> , whereby the Responsible Entity must proceed to develop an Environmental Impact Statement (EIS) in compliance with 24 CFR Part 58, Subparts F or G.	
<u>Preparer Name:</u> Alexander Tadda	
<u>Signature</u> 	<u>Date:</u> 07/11/2024

Determination of the Ohio Department of Development:

On the basis of the environmental assessment of the above project, I have made the following finding:

Finding of No Significant Impact (FONSI) [24 CFR 58.40(g)(1); 40 CFR 1508.27]

The project will not result in a significant impact on the quality of the human environment.

Finding of Significant Impact [24 CFR 58.40(g)(2); 40 CFR 1508.28]

The project may significantly affect the quality of the human environment.

CEO Name: Lydia L. Mihalik
Director, Ohio Department of Development

Address: 77 South High Street
Columbus, Ohio 43215

from City once it is received

Determination of City of Columbus:

On the basis of the environmental assessment of the above project, I have made the following finding:

- Finding of No Significant Impact (FONSI) [24 CFR 58.40(g)(1); 40 CFR 1508.27]
The project will not result in a significant impact on the quality of the human environment.
- Finding of Significant Impact [24 CFR 58.40(g)(2); 40 CFR 1508.28]
The project may significantly affect the quality of the human environment.

CEO Name: Kathy A. Owens
Director, City of Columbus, Department of Finance and Management

Address: 90 West Broad Street
Columbus, OH, 43215

Statutory Checklist Instructions:

For each of the environmental laws and authorities listed below, determine the level of compliance required and provide a narrative explanation and list of supporting documentation. **The narrative must explain decision-making and compliance procedures.** Attach all supporting documentation to this worksheet.

Statutory Checklist

Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5	Compliance Required?	Explanation and List of Compliance Documentation
<p>Historic Preservation</p> <p>Resources: State Historic Preservation Office HUD Historic Preservation</p>	<p>Yes</p>	<p>The project applied for historic tax credits for the project which involves the renovation of the mid-century apartment community comprising the National Register-eligible Eastgate Apartments Historic District. The tax credits have been conditionally approved; the signed Part 1 and Part 2 historic tax credit application forms are attached.</p> <p>In response to a request for Section 106 review, Ohio's State Historic Preservation Office (SHPO) Resource Protection and Review found that the proposed project will have no adverse effect to historic properties if it meets the conditions set forth by the Technical Preservation Services (TPS) of the SHPO, which includes submitting all finished work to the TPS of the SHPO and gaining approval by the SHPO and National Park Service (NPS). A project-specific mitigation will require the project to follow these conditions.</p> <p>In compliance with a standard mitigation, the project will be required to notify CSD and OHFA, and the City of Columbus of proposed project changes to allow evaluation of the changes, to determine whether this environmental review must be reevaluated.</p> <p>A standard mitigation lays out steps to be taken prior to and during construction to ensure proper handling of archaeological resources or human remains discovered during construction.</p> <p>A standard mitigation requires coordination with Ohio's SHPO of any additional phase or affiliated project of this project.</p> <p>Click here for documentation</p>

<p align="center">Endangered Species</p> <p>Resources: US Fish & Wildlife Service Section 7 information US Fish & Wildlife Service IPaC Endangered Species in Ohio ODNR Environmental Review HUD Endangered Species</p>	<p align="center">Yes</p>	<p>ODNR DOW indicates the site is located within one mile of records of populations of Tippecanoe darter (<i>Etheostoma tippecanoe</i>, Species of Concern), the yellow-crowned night-heron (<i>Nyctanassa violacea</i>, Species of Interest), and paddlefish (<i>Polyodon spathula</i>, Threatened). Due to the urban location and lack of in-water work, this project is not likely to impact these species. DOW also indicated that the project is within the vicinity of records for the little brown bat (<i>Myotis lucifugus</i>, state endangered). Because presence of state endangered bat species has been established in the area, summer tree cutting is not recommended, and additional summer surveys would not constitute presence/absence in the area.</p> <p>The USFWS IPaC Official Species List identified three federally listed species as potentially present in the project area and determined that no Critical Habitat for any species is present at the project site.</p> <p>Due to the lack of perennial streams or rivers at the project site, no suitable habitat for the Round Hickorynut (<i>Obovaria subrotunda</i>, threatened) is present.</p> <p>The project site provides potential habitat for Indiana bat (<i>Myotis sodalis</i>, endangered) and northern long-eared bat (<i>Myotis septentrionalis</i>, threatened). Based on a project-specific mitigation restricting tree cutting to the period from October 1 through March 31, CMT submitted to USFWS a request for concurrence with a finding of “may affect, not likely to adversely affect” for these two species. On December 21, 2023, USFWS concurred with this finding.</p> <p>Click here for correspondence</p>

<p align="center">Air Quality</p> <p>Resources: US EPA Green Book Ohio EPA State Implementation Plans HUD Air Quality</p>	<p align="center">Yes</p>	<p>Site is located in a maintenance area for the 8-hour ozone (2008), 8-hour ozone (2015) and particulate matter (particles <2.5 microns) (1997) NAAQS standards. Federal projects must conform to Clean Air Act requirements if they may constitute a significant new source of air pollution. Substantial rehabilitation projects do not create a new source of air pollution, and therefore are considered in compliance with the Clean Air Act. Project-specific mitigations will require the Property Manager to provide tenants with information about the health effects of these pollutants and how to manage them.</p> <p>To control dust and fumes, a standard mitigation will require use of Best Management Practices during construction.</p> <p>No stationary sources of air pollution will be created by the project, which will be heated and cooled with electric and natural gas equipment. In compliance with a standard mitigation, air conditioning will be supplied to all units to help reduce exposure to outside air during episodes of poor air quality.</p> <p>Click here for documentation</p>
<p align="center">Farmland Protection</p> <p>Resources: NRCS Farmland Protection Policy Act HUD Farmlands Protection US Census Bureau Urban Areas Shapefile</p>	<p align="center">No</p>	<p>Site is identified as already committed to urban development on USGS, U.S. Census Bureau and/or USDA maps and does not meet the definition of farmland.</p>

Statutory Checklist

Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5	Compliance Required?	Explanation and List of Compliance Documentation
<p align="center">Noise Abatement and Control</p> <p>Resources: HUD Noise Abatement and Control HUD Noise Guidebook HUD Day/Night Noise Level Electronic Assessment Tool HUD Sound Transmission Classification Assessment Tool ODOT Traffic Information Mapping System (TIMS) Airport Master Records and Reports National Transportation Noise Map PUCO/ORDC Railroad Information System Federal Railroad Administration Query by Location tool</p>	<p align="center">Yes</p>	<p>Site is located approximately 864 feet from I-670, 72 ft from North Nelson Road, 230 ft from the Norfolk Southern railroad line, and 715 ft from the Columbus and Ohio River Railroad. It is 3.3 miles from John Glenn Columbus International Airport, 9.6 miles from Ohio State University Airport, 11.2 miles from Bolton Field Airport, 11.4 miles from Rickenbacker International Airport, and 13.7 miles from Darby Dan Airport. Based on DNL contour maps for the three airports, none of the airports is expected to contribute noticeably to noise at the project site</p> <p>According to HUD’s online DNL Calculator, the calculated day-night average sound level for the site is approximately 74 dB, within HUD’s normally unacceptable range.</p> <p>Using sound transmission class (STC) ratings provided by Berardi & Partners, Inc., the Project Architect, for building materials to be used in the project, the STC of the wall structure is at least 34, which is greater than the required 29. Indoor noise will be less than 45 dB.</p> <p>A project-specific mitigation will require the contractors to use building materials with STCs at least as great as those provided by the Project Architect.</p> <p>Analyzed using HUD’s online DNL Calculator, the calculated day-night average noise level at the western playground is 69 dB and the calculated day-night average noise level at the eastern playground is 68 dB. Both noise levels are within HUD’s normally unacceptable range. HUD requires noise abatement of 5 dB at outdoor gathering areas for sites with noise levels between 65 and 70 dB. The proposed location of each playground is surrounded by existing Nelson Park Apartment buildings that border each playground along the north, east, and west. According to the HUD online Barrier Performance Module, the attenuation provided by the surrounding buildings will reduce noise at the outdoor areas by at least 6.5 dB in accordance with HUD requirements. A project-specific mitigation will require that the playgrounds remain in the locations shown on the site plans and that no other exterior gathering areas are created on the project site without first confirming that the proposed location meets HUD noise policy requirements.</p> <p>To avoid disturbing area noise-sensitive uses during construction, a standard mitigation requires limiting construction activities during noise-sensitive times of the day.</p> <p>Click here for documentation</p>

Statutory Checklist

Site Contamination	Yes	
<p>Resources:</p> <p>HUD Site Contamination</p> <p>US EPA NEPAassist</p> <p>US EPA Envirofacts</p> <p>US EPA Office of Radiation and Indoor Air (ORIA)</p> <p>US EPA Lead Program</p> <p>Ohio EPA Asbestos Program</p> <p>Ohio EPA Notification of Demolition and Renovation</p> <p>Ohio Tank Tracking & Environmental Regulations</p> <p>HUD Choosing an Environmentally Safe Site</p>		<p>No indicators of site contamination were noted during the site visit. A standard mitigation requires the General Contractor to halt construction and consult ODOT, and the City of Columbus if signs of contamination are discovered.</p> <p>The Phase I Environmental Site Assessment (ESA) prepared for the site identified no recognized environmental conditions in connection with the site.</p> <p>No AIRS or TRI facilities are located within 1,000 feet of the site. The local health department did not report air contaminant concerns in the project area.</p> <p>All of Ohio is located within USEPA Radon Zone 1 or 2. The project will install a radon removal (sub-slab depressurization) system to prevent radon infiltration into indoor air. To ensure the system is performing adequately, a project-specific mitigation requires a state-licensed radon professional to collect indoor radon samples after construction is complete. If any test result meets or exceeds the USEPA action level of 4 pCi/L, the mitigation requires instituting additional measures until radon levels are brought below the USEPA action level.</p> <p>The project site is currently developed with 45 two-story residential buildings, including one no longer being used for residential units that has since been repurposed as a community building, and two maintenance/storage buildings. One maintenance building will be demolished as part of the project. The remaining building interiors will be extensively renovated, including moving or removing walls. The following friable asbestos-containing materials (ACM) were identified in the project buildings:</p> <ul style="list-style-type: none"> • Paper wrap on duct • Drywall tape and compound • Vibration joint • Paper tape on duct • Rough texture on drywall • Drywall composite <p>In addition, non-friable ACM identified in the buildings included cove base and exterior caulk. In some locations, drywall composite and rough texture on drywall contained less than one percent asbestos. Where materials contain asbestos below the percentage classifying them as ACM, worker notification requirements apply but the materials do not need to be handled as asbestos-containing.</p> <p>One standard and three project-specific mitigations will address the following requirements pertaining to asbestos:</p> <ul style="list-style-type: none"> • Abatement prior to demolition of the friable ACM and any ACM that may become friable during demolition, and notification of Ohio EPA Central Office Division of Air Pollution Control. • Proper notification to workers and tenants working in and occupying areas containing ACM. • Prohibition of ACM use in the rehabilitation.

Statutory Checklist

Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5	Compliance Required?	Explanation and List of Compliance Documentation
		<ul style="list-style-type: none"> Implementation of the Asbestos Operations and Maintenance Plan developed for the project to allow for the management of ACM that will not be removed by the rehabilitation. <p>The apartment complex was constructed in 1958 and the project will comply with 24 CFR Part 35 - "Lead-Based Paint Poisoning Prevention in Certain Residential Structures." 24 CFR Part 35 and the Lead Renovation, Repair and Painting Rule do not apply to the unoccupied maintenance/storage building that will be demolished; however, to protect the health of future project residents a project-specific mitigation requires lead-safe practices during demolition of this building.</p> <p>A limited lead risk assessment, consisting of dust wipe samples and soil samples, was performed in approximately 25% of the project units. One dust sample in Unit 1092 had lead concentrations exceeding the HUD guidelines for floor dust samples. Because an LBP inspection has not been performed, all painted surfaces must be assumed to contain lead. Lead safe construction practices will be required as a project-specific mitigation. Each unit must pass clearance testing prior to re-occupancy.</p> <p>All plumbing and fixtures within the buildings will be replaced as part of the rehabilitation, including the water service lines. The project will use only lead-free plumbing, solder and fixtures in construction in accordance with the lead-free requirements of the 1986 Safe Drinking Water Act, including in the water service line. A project-specific mitigation will require project plumbing to use certified lead-free products.</p> <p>Mold was identified during the Phase 1 ESA in bathrooms, kitchens, and living rooms. The renovation scope of work includes the demolition and remediation of all areas where mold was identified. A project-specific mitigation identifies the considerations to be addressed as part of this remediation. Project plans include bathroom and kitchen fans which will help to prevent future development of indoor mold concerns.</p> <p>Click here for the Phase I ESA</p> <p>Click here for the asbestos report</p> <p>Click here for the lead-based paint report</p> <p>Click here for other documentation associated with this discussion</p>

Statutory Checklist

Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5	Compliance Required?	Explanation and List of Compliance Documentation
<p align="center">Environmental Justice</p> <p>Resources: HUD Environmental Justice US EPA Environmental Justice US EPA EJSCREEN US Climate Resilience Toolkit Climate Explorer</p>	<p align="center">Yes</p>	<p>Site is in a residential area with no nearby industrial facilities, landfills, or other obvious pollutant sources. No on-site or nearby environmental contamination or air pollution was identified by the Phase I ESA, the local health department, or the USEPA. All ACM and mold will be addressed during renovation. All painted surfaces at the project site are assumed to contain lead and will be addressed using lead safe construction practices, including clearance testing prior to re-occupancy. An evaluation of the area within one mile of the project site using USEPA’s EJSCREEN online screening application found no indication of potential environmental justice concerns requiring further investigation. The proposed development is located in a heavily developed area consisting of commercial and multi-unit residential development. No industrial facilities, landfills or obvious pollutant sources are located in close proximity to the project site.</p> <p>The US Climate Explorer tool indicates that current climate models predict the project area is likely to experience more hot days and days with high temperatures exceeding 90°F, which can increase the heat island effect in urban areas and trap air quality pollutants that would otherwise be dispersed.</p> <p>To prevent heat-related illness in tenants and reduce their exposure to air pollutants, a standard mitigation requires project units to be air conditioned. To inform prospective and existing tenants of the environmental status of the project site, a standard mitigation requires the Property Manager to advise tenants of their ability to review this environmental document, including before they sign any lease agreement.</p> <p>Click here for documentation</p>

Environmental Assessment Checklist Instructions:

Evaluate the significance of the effects of the proposed activity on the character, features, and resources of the project area. Provide a narrative explanation and list of supporting documentation. **The narrative must explain decision-making and compliance procedures.** Attach all supporting documentation to this worksheet. For technical assistance, see HUD's [Environmental Assessment Factors Guidance](#).

Environmental Assessment Checklist

Land Development		
Impact Category	Impact Code	Explanation and List of Source Documentation
Conformance with Plans / Compatible Land Use and Zoning / Scale and Urban Design	No Impact Anticipated	Site is zoned appropriately for the proposed use, which is compatible with local planning documents. Project design is compatible with surrounding development. Click here for documentation
Soil Suitability / Slope / Erosion / Drainage / Storm Water Runoff	Requires Mitigation	NRCS indicates limitations of site soils for the type of development proposed. Upon the review of existing conditions at the project site, the project architect did not note any structural concerns that are attributable to soil conditions. No erosion, subsidence, poorly drained areas, or inadequate storm drainage facilities were noted during the site visit or identified by project team members. ODNR mapping identifies no known or suspected mines or karst features in the project area. A standard mitigation requires the Project Developer either to meet requirements of the NPDES Construction Storm Water Permit program or to document exemption. If exempt, a project specific mitigation requires compliance with Best Management Practices to prevent erosion and runoff siltation during construction. Click here for documentation
Hazards and Nuisances Including Site Safety and Noise	Requires Mitigation	Steep slopes are present on the project site. An existing retaining wall made of repurposed railroad ties was failing at the time of the site visit. The project plans to replace the existing retaining wall with a stone retaining wall with the height to match the existing. A large portion of the slope and retaining wall is buffered by scrub/shrub

Environmental Assessment Checklist

Land Development

Impact Category	Impact Code	Explanation and List of Source Documentation
		<p>vegetation. No buildings, walkways, or public areas are located near the steep slopes. The project architect confirmed that all retaining walls that are proposed to be over thirty inches will include a railing to help prevent falls. There will be no detention basins or other water bodies at the site. No traffic hazards were identified.</p> <p>The project market study indicates the project area has higher than average crime compared to other locations in the United States. The local police department did not respond to a request for information on crime concerns or rates of vehicular or pedestrian accidents in the project area. The project site will have new security cameras, site lighting and parking lot lighting as a result of the project. The project site will continue to have security services from off-duty Columbus Police Department officers.</p> <p>Building codes address seismic and weather-related natural hazards occurring in the project area. There are no hazardous terrain features in the project area and the project site is not prone to flooding.</p> <p>I-670 is a designated hazardous material route limited to the delivery of non-radioactive hazardous materials within the City of Columbus. Through-route hazardous materials transportation is directed around Columbus on I-270. The railroad east of the project site is a potential hazardous materials route, as are all railroads in Ohio. No tank car terminals, or other hazardous chemical storage, and no heavy industry, incinerators, power plants, rendering plants, fugitive dust sources, cement plants, oil refineries, or large parking facilities (1,000+ cars) are located within approximately 1,000 feet of the site. I-670 is located approximately 860 feet north of the project site. ODNR did not identify permitted oil or gas wells within 300 feet of the site. The National Pipeline Mapping System does not indicate high-pressure gas or liquid petroleum transmission pipeline easements near the site.</p> <p>During the site visit, no radio or cell towers, persistent unpleasant odors, gases, smoke or fumes, vibration, lighting glare, or property neglect was observed in the project area.</p> <p>A standard mitigation requires the General Contractor to follow Occupational Safety and Health Administration (OSHA) guidelines to ensure worker and public safety.</p> <p>A standard mitigation requires the Property Manager to provide tenants in-person notification of safety precautions and features available at the project site.</p> <p>Click here for documentation</p>

Environmental Assessment Checklist

Land Development

Impact Category	Impact Code	Explanation and List of Source Documentation
Energy Consumption	No Impact Anticipated	<p>There will be a temporary increase of energy use during construction for power tools. Due to added energy efficiency measures, energy use is expected to decrease after construction. The Project Architect has certified that the project will meet OHFA's energy efficiency requirements, including National Green Building Standards (NGBS) Bronze certification. American Electric Power (AEP) will provide electric service to the project and Columbia Gas will provide natural gas.</p> <p>Click here for documentation</p>

Socioeconomic

Impact Category	Impact Code	Explanation and List of Source Documentation
Employment and Income Patterns	No Impact Anticipated	<p>Project supportive services will include vocational training and employment support that may result in improved employment situations for project residents. The project's senior residents are expected to have existing employment or be retired.</p> <p>Click here for documentation</p>
Demographic Character Changes, Displacement	Requires Mitigation	<p>Since the project will provide housing for seniors as well as non-seniors, it is expected to permit older residents of the region to remain within their community when physical or financial limitations no longer permit their maintaining their own homes as well as attracting existing residents of this area which has a need for affordable housing. It will help retain current residents of the site by providing them with renovated, affordable housing.</p> <p>During renovations, current tenants will be relocated temporarily within the existing complex. If any tenants need to be permanently relocated, they will receive a tenant protection voucher. A project-specific mitigation requires the Project Sponsor and Developer to coordinate with OHFA to comply with the Uniform Relocation Act.</p>

Environmental Assessment Checklist

Community Facilities and Services		
Impact Category	Impact Code	Explanation and List of Source Documentation
Educational and Cultural Facilities	No Impact Anticipated	The local school district did not respond to information requests concerning the neighborhood schools, preschool and adult education. Eastgate Elementary School is located approximately 0.1 mile south and Eastgate High school is located approximately 0.75 mile southwest of the project area. The nearest library is the Shepard Branch of Columbus Metropolitan Library at 850 N Nelson Rd, Columbus, OH 43219, one mile northeast of the project site. High-speed internet will be available at the library and within the project buildings. Cultural facilities and activities in the area include the Bexley Historical Society's Museum and Franklin Park Conservatory and Botanical Gardens.
Commercial Facilities	No Impact Anticipated	As shown on the attached community services map, basic commercial facilities such as groceries, pharmacies and banks are available in the community. Public transportation is available to transport residents to and from these facilities within a one-hour round trip, HUD's preferred travel time. The onsite case manager will be available to request transportation through a third-party transportation company at no cost to the resident on a regular, scheduled basis. More comprehensive commercial facilities are available in the Whitehall neighborhood east of the project site. Click here for documentation
Health Care and Social Services	No Impact Anticipated	As shown on the attached community services map , doctors and dentists are available in the project area. The nearest full-service hospital is The Ohio State East Hospital, located at 181 Taylor Ave, Columbus, OH 43203, 1.3 miles southwest of the project site. The Project Sponsor will facilitate residents' access to social services appropriate to the project's population. As part of the project's supportive services plan, an onsite Case Manager will initially focus on assisting residents with basic needs such as food, clothing, and medical care. Once residents' basic needs have been met, the Case Manager will work with residents to create individualized supportive services plans and regularly assess plans to ensure that all residents have access to the social services offered. Click here for documentation
Solid Waste Disposal / Recycling	Requires Mitigation	Both construction of the project and its ongoing operation will generate solid waste. A standard mitigation requires the Project Sponsor and Property Developer to ensure contractors properly dispose of construction wastes, and requires the Property Manager to ensure that solid wastes are regularly removed from the project and that assistance is available for residents who are unable to move their own waste collection container.

Environmental Assessment Checklist

Community Facilities and Services		
Impact Category	Impact Code	Explanation and List of Source Documentation
Waste Water / Sanitary Sewers	No Impact Anticipated	<p>The project site is served by the City of Columbus. No change in service is anticipated. USEPA indicates the provider has violations in the past three years. Due to the fact the project is a rehabilitation and the number of units will decrease, the project will not result in an increase in flows treated by the water treatment plant. Therefore, the project is not expected to have an effect on the status of the treatment plant.</p> <p>Click here for documentation</p>
Water Supply	No Impact Anticipated	<p>The project site is served by the City of Columbus. No change in service is anticipated. USEPA indicates the provider has no violations in the past three years. The provider's most recent drinking water quality report indicates the provided water is in compliance with all drinking water regulations.</p> <p>Click here for documentation</p>
Public Safety – Police, Fire and Emergency Medical	No Impact Anticipated	<p>The project site is served by the City of Columbus Police and the Columbus Division of Fire. The nearest police station, Substation 7, is located 0.6 miles southwest and the nearest fire station, Station 8, is located 0.8 miles northeast from the project site. Emergency services can be reached via calling 911, which includes both landline and cellular caller location identification. Text-to-911 is available in the project county.</p> <p>Click here for documentation</p>
Parks, Open Space and Recreation	No Impact Anticipated	<p>The project site will include a community building and two playgrounds. Nearby public recreational facilities include Nelson Park, Franklin Park, and YMCA of Central Ohio - Eldon and Elsie.</p>
Transportation and Accessibility	No Impact Anticipated	<p>Traffic congestion is not a concern in the project area. Sidewalks are available along local streets. Signalized crosswalks are provided at major intersections in the project area. Bike parking will be available at the project site.</p> <p>Public transportation is available in the project area. A bus stop is available adjacent to the project site. Transportation costs \$2.00 per ride, and monthly passes are available. Schedules for buses that stop at the bus stop closest to the project site are attached.</p> <p>The Project Architect has certified that site facilities will comply with the Americans with Disabilities Act and the Fair Housing Accessibility Guidelines, as well as Section 504 of the Rehabilitation Act and the Ohio Basic Building Code.</p> <p>The project site will offer 187 parking spaces, including 24 accessible parking spaces. Most project residents are expected to own vehicles.</p> <p>Click here for documentation</p>

Environmental Assessment Checklist

Natural Features		
Impact Category	Impact Code	Explanation and List of Source Documentation
Unique Natural Features, Water Resources	Requires Mitigation	<p>No unique natural features were observed during the site inspection.</p> <p>The project site is not located within a designated sole source aquifer. According to ODNR mapping, groundwater at the project site is found in a buried valley, from which yields of 100-500 gallons per minute may be developed. ODNR indicates that groundwater at the project site is relatively sensitive to the effects of pollutant releases.</p> <p>No wetlands or streams were identified at the project site. The nearest surface water is Alum Creek, located approximately 320 feet east of the site.</p> <p>To prevent contamination of water resources in the vicinity of the project site, a standard mitigation requires that the General Contractor maintain a spill response kit at the site and minimize on-site chemical storage during construction.</p> <p>During construction, the project will require only limited use of water. As discussed previously, an OEPA NPDES General Permit for Storm Water Discharges from Construction Activities or documentation of exemption will be required. The project will be required to implement best management practices to control erosion from the site.</p> <p>Following construction, the project facilities will be served by public water and sewer. The project will increase the quantity of impermeable surface in the project area and will include stormwater management facilities designed to maintain pre-construction stormwater discharge rates from the site. There is no evidence that the project will damage local water quality.</p> <p>Click here for documentation</p>
Vegetation and Wildlife	Requires Mitigation	<p>The project will use only native species in its landscaping. To prevent the establishment of invasive species, a project-specific mitigation prohibits landscaping use of species identified by Ohio state agencies as invasive in Ohio, and requires removal of invasive species during construction.</p> <p>ODNR Division of Wildlife indicated that the site is within the historic range of a number of state-listed species. DOW's recommendations regarding Indiana bat (<i>Myotis sodalis</i>, state and federally endangered), northern long-eared bat (<i>Myotis septentrionalis</i>, state endangered and federally threatened), little brown bat (<i>Myotis lucifugus</i>, state endangered) and tricolored bat (<i>Perimyotis subflavus</i>, state endangered) are consistent with the discussion and mitigations regarding Indiana bat and northern long-eared bat in this document's Statutory Checklist.</p> <p>Due to the location and that there is no in-water work being proposed in a perennial stream as part of the project, ODNR DOW concluded that the project is not likely to impact the following species:</p>

Impact Category	Impact Code	Explanation and List of Source Documentation
		<ul style="list-style-type: none"> • Clubshell (<i>Pleurobema clava</i>, Federally Endangered) • Rayed bean (<i>Villosa fabalis</i>, Federally Endangered) • Northern riffleshell (<i>Epioblasma torulosa rangiana</i>, Federally Endangered) • Snuffbox (<i>Epioblasma triquetra</i>, Federally Endangered) • Purple cat's paw (<i>Epioblasma o. obliquata</i>, Federally Endangered) • Rabbitsfoot (<i>Quadrula cylindrica cylindrica</i>, Federally Threatened) • Elephant-ear (<i>Elliptio crassidens crassidens</i>, State Endangered) • Pocketbook (<i>Lampsilis ovata</i>, State Endangered) • Long solid (<i>Fusconaia maculata maculate</i>, State Endangered) • Washboard (<i>Megaloniaias nervosa</i>, State Endangered) • Ohio pigtoe (<i>Pleurobema cordatum</i>, State Endangered) • Pondhorn (<i>Unio merus tetralasmus</i>, State Threatened) • Salamander Mussel (<i>Simpsonaias ambigua</i>, State Threatened) • Goldeye (<i>Hiodon alosoides</i>, State Endangered) • Shortnose gar (<i>Lepisosteus platostomus</i>, State Endangered) • Iowa darter (<i>Etheostoma exile</i>, State Endangered) • Spotted darter (<i>Etheostoma maculatum</i>, State Endangered) • Northern brook lamprey (<i>Ichthyomyzon fossor</i>, State Endangered) • Tonguetied minnow (<i>Exoglossum laurae</i>, State Endangered) • Popeye shiner (<i>Notropis ariommus</i>, State Endangered) • Lake chubsucker (<i>Erimyzon sucetta</i>, State Threatened) • Paddlefish (<i>Polyodon spathula</i>, State Threatened) <p>Click here for documentation</p>
Other Factors	No Impact Anticipated	<p>According to the U.S. Climate Resilience Toolkit Climate Explorer, increased extreme heat events and their side effects will be the primary effect of climate change on the project area. The Climate Explorer indicates that by the 2050s, annual days that the maximum temperature exceeds 90°F will increase from the 1961-1990 observed average of 12.3 days to an average of 62.6 days annually if global emissions of heat-trapping gases continue to increase. Annual cooling degree-days are projected to increase from the observed average of 900 degree-days to an average of 1800 degree-days.</p> <p>The effects of the increased heat are expected to include the following:</p> <ul style="list-style-type: none"> • Increased risk of heat-related illness • Increased health risks in persons with existing cerebral, respiratory and cardiovascular disease • Increased impacts on persons taking prescription or other drugs that may alter

		<p>the circulatory system, such as blood pressure medications</p> <ul style="list-style-type: none"> • Increased heat island effect in urban areas, leading to an increased risk of air pollutant accumulation in urban and nearby suburban areas because air pollutants that would otherwise disperse may become trapped within the heat island area. <p>Project units will offer air conditioning to counter the effects of excessive heat. HVAC systems will include filtration to reduce indoor particulate air pollution.</p> <p>The Climate Explorer does not indicate a noticeable increase of total precipitation, dry days or extreme rainfall events in current climate models.</p> <p>Click here for documentation</p>

24 CFR Section 58.6 Requirements

Airport Runway Clear Zones and Clear Zones Notification

[24 C.F.R. Part 51.303(a)(3)]

Does the project involve the sale or acquisition of property located within a Civil Airport Runway Clear Zone or a Military Airfield Clear Zone?

- No. [Click here for documentation](#)
(Project complies with 24 CFR 51.303(a)(3).)
- Yes. **Notice must be provided to buyer.** The notice must advise the buyer that the property is in a Runway Clear Zone or Clear Zone, what the implications of such a location are, and that there is a possibility that the property may, at a later date, be acquired by the airport operator. The buyer must sign a statement acknowledging receipt of this information. (for a sample notice, see the [HUD Exchange](#)) (**attach a copy of the signed notice**)

Coastal Barrier Resources Act

[Coastal Barrier Improvement Act of 1990 (16 U.S.C. 3501)]

Is the project located in a [coastal barrier resource area](#)?

- No. [Click here for documentation](#)
(Proceed with project.)
- Yes. Federal assistance may not be used in such an area.

Flood Disaster Protection Act*

[Flood Disaster Protection Act of 1973, as amended (42 U.S.C. 4001-4128)]

Does the project involve acquisition, construction or rehabilitation of structures located in a FEMA-identified Special Flood Hazard Area?

- No. [Click here for documentation](#)
- Yes. **Attach copy of Flood Insurance Rate Map (FIRM)**

Is the community participating in the National Insurance Program (or has less than one year passed since FEMA notification of Special Flood Hazards)?

Yes. Flood Insurance under the National Flood Insurance Program must be obtained. If HUD assistance is provided as a grant, insurance must be maintained for the economic life of the project and in the amount of the total project cost (or up to the maximum allowable coverage, whichever is less). If HUD assistance is provided as a loan, insurance must be maintained for the term of the loan and in the amount of the loan (or up to the maximum allowable coverage, whichever is less). (**Attach a copy of the flood insurance policy declaration**)

No. **Federal assistance may not be used in the Special Flood Hazard Area.**

**Per 24 CFR 58.6(a)(3), this requirement does not apply to State-administered CDBG, HOME, and ESG programs.*

Statement of Process and Status of Environmental Analysis

Instructions:

Provide a brief description of the administrative procedures associated with the construction and presentation of the environmental review record (ERR). List the Responsible Entity, Certifying Officer, the physical location of the ERR, the dates and comment periods associated with any public notices, and contact information for the submission of comments regarding the ERR.

Nelson Park Preservation Associates, LLC, a for-profit organization, submitted an application for Ohio Housing Finance Agency (OHFA) Gap Financing funded with HOME Investment Partnership (HOME) American Rescue Plan (ARP) funds on October 13, 2022. Nelson Park Preservation Associates, LLC, submitted an application for City of Columbus financing funded with HOME funds on June 30, 2022. Both forms of assistance have been approved. The federal HOME funds require the preparation of an environmental review record, consistent with the requirements of Title 24 of the Code of Federal Regulations (CFR) Part 58.

No public hearings are required for the financial assistance and none are anticipated. A resident meeting was conducted on October 13, 2022 where current residents could ask questions, and multiple meetings with the Near East Area Commission, Eastgate Neighborhood Association and The City of Columbus were conducted to gauge support and get feedback.

The State of Ohio and the City of Columbus are each responsible for conducting the environmental review, decision-making, and actions. On June 22, 2023 and July 17, 2023, respectively, the City and Ohio Department of Development (ODOD) signed a Memorandum of Agreement governing the preparation of a joint Environmental Review Record to address the environmental review responsibilities of each responsible entity. OHFA contracted with CMT to conduct the environmental review and prepare the record.

This environmental review was completed on June 27, 2024. Lydia L. Mihalik, Director of Ohio Department of Development (Development), is the certifying officer for the State of Ohio's Department of Development and assumes responsibility for the accuracy and completeness of the record. The Community Services Department (CSD) administers the HOME-ARP funds for Development. Kathy Owens, Director of the Department of Finance and Management, is the certifying officer for the City and assumes responsibility for the accuracy and completeness of the record on behalf of the City. The Department of Finance and Management administers the HOME funds for the City. The record is a public record and is open for review. The record for this project is available for review on the Ohio Housing Finance Agency's website at <https://ohiohome.org/ppd/publicforums.aspx>. Any individual, group, or agency may submit written comments on the ERR via email to the State of Ohio at OCD@development.ohio.gov.

Development CSD and the City of Columbus are making this record and its documentation available for public review and comment by advertising in the *Columbus Dispatch* (Phone: 614-583-5798). The State and the City plans to publish a combined Notice to the Public of a Finding of No Significant Impact on the environment (FONSI) and a Notice of Intent to Request a Release of Funds (NOI/RROF) on **[Legal ad publication date provided by ODOD after their review]**.

The State will receive comments and objections until **[15th day counting from day after legal ad publication date]**. Any comments received will be evaluated and incorporated in the record, as appropriate. On or about, but not before, **[Same 15-day date; verify with ODOD if the 15th day falls on a weekend]**, the State and the City will submit to their grantor agency, the U.S. Department of Housing and Urban Development (HUD), a Request for Release of Funds (RROF). (HUD-Columbus, 200 North High Street, Columbus, Ohio 43215.) Upon receipt of the RROF, HUD will wait 15 calendar days to receive any objections to the release of funds. Any objections will be responded to by the State of Ohio and the City of Columbus and to the satisfaction of HUD. The effect of HUD releasing funds is that the State and the City (and the Project Sponsor) may then (and then only) obligate any of the project funds (private and public).

The Project Sponsor is responsible for monitoring the implementation of the project in conjunction with findings and mitigation measures identified in this record.

[Click here to see referenced attachments.](#)

Description of the Site and Environmental Context

Instructions:

Determine existing conditions and describe the character, features, and resources of the project area and its surroundings. Identify the trends that are likely to continue in the absence of the project.

The project is located in Columbus, which is located in central Franklin County. According to ODOD's Office of Research, in 2020, Columbus had a population of 1,323,807; the county population is projected to increase in the next 20 years. Columbus serves as the county seat. The Education & Health Services; Trade, Transportation, & Utilities; and Professional & Business Services sectors are the largest employers in the county. In 2020, the county unemployment rate was 7.4% and approximately 32.3% of the population had incomes below 200% of the federal poverty level.

The site is located at 1994 Maryland Avenue, Columbus, Ohio. The site is currently developed with 177 multi-family and senior apartments in 45 two-story brick buildings, a community building, and a storage shed. The project site was listed on the National Register of Historic Places on November 11, 2023 as "Eastgate Apartments Historic District."

Some trees at the site exhibit bat habitat such as cavities or peeling bark. No streams, wetlands, or water bodies are located on site. Asbestos, including friable asbestos thermal system insulation, was identified in all of the project site buildings. Using dust sampling, one unit was found to have a lead hazard with concentrations exceeding the HUD guidelines for floors. No lead was detected above general site action levels in soils at the building driplines. Testing of the painted surfaces was not performed. An existing retaining wall north of one section of project buildings is constructed of timbers and is failing as the timbers break down.

The site is zoned for residential use. The project is bound by an Amazon Distribution Center and associated parking lot to the north, North Nelson Road/US 62 followed by multi-family apartments and Nelson Park to the east, Maryland Avenue followed by single family homes to the south, and Sunbury Road followed by forested areas and railroad tracks maintained by Norfolk Southern to the west. Noise levels at the site are approximately 74 dB, with the Norfolk Southern railroad contributing the majority of the noise. According to the market study conducted for the project, demand for affordable housing is strong within the areas adjacent to the project site, as the area has a high percent of low-income individuals.

Municipal services available to the site include police, fire, EMS, potable water, sanitary and storm sewers, education including preschool and adult education, libraries, public transportation, and parks and recreational facilities. Commercial and health care facilities are available within one mile of the site. The nearest hospital is 0.7 mile west of the site. Higher education is available within 3.4 miles west of the site.

Analysis of Alternatives

Instructions:

Examine alternatives to the project, including the alternative of no action.

The project is located in an area with demonstrated need for affordable housing for senior adults and families. The project is intended to accomplish the following goals:

- Provide quality, affordable multi-family housing in an area that has a shortage of affordable multi-family housing.
- Preserve the apartment complex as Section 8 housing.
- Adaptively reuse underutilized residential buildings on the project site to provide additional community and management space on site.

Consistent with the identified goals, the following alternatives were considered for the project:

- Alternative 1. No Action. The no action alternative would fail to address the need for quality, affordable multi-family and senior housing in Columbus and the surrounding area.
- Alternative 2. Demolish the Existing Complex and Construct a New Complex. The cumulative relocation costs, demolition costs, and new construction costs would far exceed the costs of the proposed improvements to the existing complex. Demolition of the existing complex and the associated loss of acquisition basis alone would make the project financially infeasible. Furthermore, demolishing the existing complex would result in an adverse impact to a National Register of Historic Places listed property.
- Alternative 3. Renovate the Buildings as Proposed. This option will allow the existing units to be reconfigured, fully renovated and preserved as quality affordable housing. Additionally, this option will ensure that the renovation of the historically significant buildings will meet the Secretary of the Interior's Standards for Rehabilitation.

Because it meets the project goals while minimizing cost and reusing underutilized residential buildings on site, Alternative 3 is the preferred alternative.

Analysis of Impacts and Mitigation Actions

Instructions:

Summarize and evaluate all potential environmental impacts, whether beneficial or adverse, and the conditions that would change as a result of the project. Describe measures to eliminate, minimize, or mitigate adverse environmental impacts.

The Nelson Park Apartments project will have minimal environmental impact while providing quality, affordable multi-family housing.

The project is listed on the National Register of Historic Places (NRHP) as Eastgate Apartments Historic District (NR Ref #SG 100009 503). The SHPO concurred with ODOD's findings of no adverse effects on historic properties if the conditions set by the Secretary of the Interior's Standards for Rehabilitation are met.

The project site is currently developed with 45 two-story residential buildings, including one repurposed as a community building, and two maintenance/storage buildings. One maintenance building will be demolished as part of the project. Bureau-Veritas identified friable asbestos-containing material (ACM) in the building to be demolished. Abatement of the ACM, including notification of Ohio EPA Central Office Division of Air Pollution Control, will be required prior to demolition work in any location where the materials will be disturbed. ACMs will not be utilized in the rehabilitation.

Some trees may be cleared as a result of this project. The USFWS concurred with ODOD's finding that based on the standard mitigation limiting the time frame of tree removal from October 1st through March 30th, the project is not likely to have an adverse effect on Indiana bat and northern long-eared bat, the two listed species in the project area.

According to HUD's online DNL Calculator, the calculated worst case day-night average sound level for the site is approximately 74 dB, within HUD's normally unacceptable range. The STC of the wall structure of the project buildings was found to be at least 34 dB, which is greater than the required 29 dB. Indoor noise will be less than 45 dB. Day-night average levels at the two existing playgrounds are approximately 68-69 dB. The project buildings serve as sound barriers for the two existing playgrounds, reducing the sound levels by over 5 dB as required by HUD noise policy.

It is the Finding of this assessment that these activities do not constitute an action having an individually or cumulatively significant effect on the human environment and therefore do not require the preparation of an environmental impact statement. The publication of a Finding of No Significant Impact and Notice of Intent to Request Release of Funds may be made on the basis of this Finding.

Monitoring and Enforcement Procedures

Instructions:

Describe any post-review monitoring or enforcement procedures associated with environmental mitigation actions.

Nelson Park Apartments, OHFA Tracking number: 22-0267

The Project Sponsor, Nelson Park Preservation Associates, LLC, is responsible for monitoring the project to ensure that mitigation measures identified in this report are implemented. On March 24, 2023, Kelan Craig with Renewal Housing Associates signed the standard mitigation measures on behalf of the project team; a copy is attached. On June 28th, 2024, Kelan Craig with Renewal Housing Associated confirmed that the project team will comply with the mitigation measures developed specifically for the project; confirmation is attached. Procedures for implementing the mitigation measures are described below. OHFA staff will monitor the project sponsor for compliance with these responsibilities.

With respect to the mitigations, the project site is considered to include not only the physical site of the proposed development, but also any areas that will be disturbed due to project activities. That is, off-site activities that are wholly or partially a result of the project are subject to the mitigations as if the activities were occurring on the development site.

The Project Sponsor shall update the review record to reflect compliance with the mitigations and shall provide these updates to OHFA as the mitigations are performed and no later than upon completion of the construction of the project.

Project-Specific Mitigation Measures

1. The Project Developer shall install an active radon removal system (sub-slab depressurization system) or systems serving all project units. All slab and basement wall and floor] penetrations shall be sealed using best practices.

Construction drawings shall be modified to include all required radon system components, including sub-slab collection of vapors, venting of vapors away from project units, powered fans and provisions for sealing all slab penetrations with suitable methods. The revised plan sheets shall be provided to CSD, the city of Columbus and OHFA.

2. No sooner than one month after completion of construction, the Property Manager shall conduct radon testing in conformance with O.A.C. 3701:69-07, as well as ANSI/AARST "Protocol for Conducting Radon and Radon Decay Product Measurements in Multifamily Buildings (MAMF-2017) with 1/2021 Revisions" or the most recent testing protocols for the applicable building type. The radon sampling tester shall be licensed by the State of Ohio and shall certify that the correct sampling procedures have been followed. For any area where test results are at or above 4 pCi/L, the Property Manager must consult with a radon mitigation specialist licensed by the State of Ohio to modify the radon removal system to reduce radon levels, resulting in confirmatory test results in all units below 4 pCi/L. Repeat sampling to confirm compliance shall be completed no sooner than one month after system modifications to confirm that radon levels in all units are below 4 pCi/L.

The Project Sponsor shall provide a copy of all radon sample reports to CSD, the City of Columbus, and OHFA and maintain a copy in the project file. If system modifications are required, the Project Sponsor shall provide CSD, the City of Columbus, and OHFA with documentation of the nature and installation date(s) of the modifications and maintain a copy in the project file.

Monitoring and Enforcement Procedures

3. Best Management Practices shall be used during demolition to prevent release of lead-contaminated dust or debris. No visible dust shall be emitted from demolition activities. All paint chips and other debris or residue shall be removed from the project site at the completion of demolition. Storage and transport of materials known or assumed to contain lead-based paint shall be covered to prevent access to or release of lead-contaminated dust or debris.

Construction drawings shall be modified to reflect required Best Management Practices. Documentation of appropriate storage, transport and disposal of materials known or assumed to contain lead-based paint shall be maintained with the project file and provided to the Project Sponsor, CSD, The City of Columbus and OHFA.

4. For all Lead based paint covered surfaces remaining after renovation, the project shall comply with HUD's Lead Safe Housing Rule, which assumes all surfaces are LBP and includes notifying occupants about the risk associated with LBP, ongoing maintenance, abatement of LBP hazards, and passing a clearance exam.

The property manager shall have a system in place that documents they or the subrecipients ensure Owner/Landlord complies with Lead Safe Housing Rule and Lead Disclosure Rule.

5. The project will be required to comply with 24 CFR Part 35 - "Lead-Based Paint Poisoning Prevention in Certain Residential Structures" and USEPA's Lead-Based Paint Renovation, Repair and Painting (RRP) Rule, 40, CFR 745, Subpart E. The project will be required to identify and control lead hazards at the renovation sites, at a minimum for all directly assisted units, including common areas and exterior areas. This will include paint testing and risk assessment by a certified risk assessor, abatement measures to address identified lead hazards, safe work practices, clearance testing of units prior to occupancy, and incorporating lead-based paint maintenance activities into regular building maintenance operations for covered work if lead-based paint remains after rehabilitation is completed.

Evidence of compliance with 24 CFR 35 and 40 CFR 745, Subpart E shall be maintained in the project file and provided to the Project Sponsor, CSD, the City of Columbus and OHFA. The Property Manager shall incorporate disclosure requirements into new tenant orientation, if applicable.

6. All plumbing piping, solder and fixtures installed as part of the project shall comply with the lead-free requirements of the Safe Drinking Water Act of 1986 as amended.

Plans and specifications should require use of certified lead-free plumbing products and fixtures in all potable water supply uses, except as allowed by Safe Drinking Water Act exemptions. Certification marks and text should be imprinted on product packaging or on the fixtures, or documentation should be obtained from the manufacturer.

7. No dead or live trees with a diameter at breast height (dbh) of 3 inches or greater shall be removed from the project site between April 1 and September 30. If such trees must be removed between April 1 and September 30, the project must first contact USFWS to discuss surveying possibilities for Indiana bats, and must complete consultation to the satisfaction of USFWS before proceeding with tree removal.

Construction plans shall include a restriction on the removal of trees between April 1 and September 30. In the event that the project is unable to comply with this restriction, the project shall document completed consultation with USFWS, including any evaluation by a qualified professional of the trees to be removed. Documentation of the consultation and conclusions must be provided to CSD, the City of Columbus, and OHFA for review and concurrence prior to proceeding with any removal. Written documentation must be maintained and be provided to the Project Sponsor, Property Manager, CSD, the City of Columbus, and OHFA, and kept in file documentation with the record.

8. Best Management Practices shall be employed to control erosion during construction and until final cover is established.

During site inspections, erosion control measures should be observed to be in place. Run-off from the site should be minimal. There should not be extensive siltation along run-off pathways.

Monitoring and Enforcement Procedures

9. Project landscaping shall not include any species identified by the Ohio Department of Agriculture or the Ohio Department of Natural Resources as invasive in Ohio. During construction, any Ohio invasive species shall be removed from all areas disturbed by the project and measures shall be taken to eradicate any Ohio invasive species that emerge in disturbed areas.

Neither common names nor species names of plants installed as part of project landscaping should appear on the list of invasive species found at OAC 901:5-37-01 or on ODNR's Invasive Plants in Ohio publication (Ohio's Invasive Plant Species) available at the ODNR Invasive Plants Publications & Links website. If these species are present or emerge in disturbed areas of the project site, the Project Sponsor should consult with ODNR, with the County Extension Service and/or with a qualified invasive species management expert to determine appropriate methods of removal and control.

10. A copy of the USEPA's "Smog – Who Does It Hurt," or similar literature providing information on ozone health effects and protective actions, shall be provided to residents as part of the new tenant package [or at the earliest time deemed appropriate by project supportive services staff].

The Property Manager shall include literature providing information on ozone health effects and protective actions in the new tenant package.

11. A copy of the USEPA's "Particle Pollution and Your Health," or similar literature providing information on particulate pollution's health effects and protective actions, shall be provided to residents as part of the new tenant package [or at the earliest time deemed appropriate by project supportive services staff].

The Property Manager shall include literature providing information on the health effects of particulate matter and protective actions in the new tenant package and shall provide such literature to the project supportive services staff for distribution.

12. The Project Developer and Property Manager shall not relocate the existing playgrounds or add exterior gathering areas such as a picnic area or gazebo to the project site without first evaluating the proposed location for sound levels, and for noise attenuation if necessary, following HUD's noise policy and procedures.

During inspections, the playgrounds should be located as shown on the June 2023 project plans. If other exterior gathering areas are present, then documentation of a HUD noise analysis should be available at the project site and with the project record showing that noise levels at the new gathering area meet HUD requirements.

13. The Project Developer shall ensure that the as-built construction materials provide a level of noise attenuation that meets or exceeds the levels presented by the Project Architect in the Noise Attenuation Form.

The Project Developer shall ensure that project plans call for construction materials with Sound Transmission Class ratings equal to or greater than those presented on the Noise Attenuation Form. The Project Developer shall ensure that the materials specified are utilized in construction. Written documentation must be maintained.

14. Any asbestos-containing materials that will be disturbed (made friable) during renovation/ rehabilitation are required to be removed. Asbestos-containing materials must be removed by a licensed asbestos abatement contractor to ensure that asbestos is properly controlled and managed during rehabilitation activities. All appropriate regulations shall be followed to ensure employee protection and proper disposal and handling of the material. Notifications of abatement activities shall be made to all appropriate regulatory agencies.

Evidence of asbestos abatement and agency notification must be maintained with the record and provided to the Project Sponsor, Property Manager, CSD, the City of Columbus, and OHFA.

15. As required by federal and State regulations, appropriate notifications shall be made to employees and tenants working in and occupying areas containing asbestos-containing materials and/or lead-based paint.

The Project Developer and Property Manager shall maintain documentation that all necessary employee and tenant notifications have been made. If necessary, asbestos and lead-based paint notification and information should be included in the New Tenant Package and asbestos and lead-based paint should be addressed in the Property Manager's Hazard Control Plan. Documentation must be maintained with

Monitoring and Enforcement Procedures

the record and provided to the Project Sponsor, Property Manager, CSD, the City of Columbus, and OHFA.

16. The Project Developer and Property Manager shall develop an asbestos management program and Operations and Maintenance Plan in accordance with the requirements of 40 CFR 763. The program shall include, but not be limited to, periodic tenant notification of the presence of any exposed asbestos-containing materials in their residential units, appropriate training of maintenance personnel, and procedures to be followed if disturbance of the asbestos-containing materials becomes necessary. Asbestos-containing materials to remain in place shall not be damaged during renovations.

Project plans shall be modified to include the location of all asbestos-containing materials to remain in place and instructions for the protection of these materials during renovations. A copy of the Operations and Maintenance Plan shall be provided to CSD, the City of Columbus, and OHFA, maintained with the project file, and available in the management office at all times. The Property Manager shall maintain records of maintenance personnel training and periodic tenant notification which shall be available in the management office at all times.

17. Best Management Practices shall be used during demolition to prevent release of lead-contaminated dust or debris. No visible dust shall be emitted from demolition activities. All paint chips and other debris or residue shall be removed from the project site at the completion of demolition. Storage and transport of materials known or assumed to contain lead-based paint shall be covered to prevent access to or release of lead-contaminated dust or debris.

Construction drawings shall be modified to reflect required Best Management Practices. Documentation of appropriate storage, transport and disposal of materials known or assumed to contain lead-based paint shall be maintained with the project file and provided to the Project Sponsor, CSD, the City of Columbus, and OHFA.

18. During construction, all project units and common areas shall be examined for indoor mold on all surfaces that are exposed either on a regular basis or by the project scope of work. The cause of any identified mold shall be determined and corrected as part of construction, and all mold shall be remediated.

Remediation shall be in accordance with the USEPA publication "Mold Remediation in Schools and Commercial Buildings (EPA 402-K-01-001 as updated). A record of the date and results of each unit's or area's inspection, and a record of the extent of any repairs or remediation, must be maintained in the project file and provided to CSD, the City of Columbus, and OHFA.

19. The Project shall coordinate with OHFA regarding the compliance of the relocation plans.

Documentation of relocation actions, including OHFA approval, must be maintained in the project files and provided to CSD, the City of Columbus, and OHFA.

20. The Project Developer and General Contractor shall comply with the conditions presented in the Part 2 Historic Preservation Certification Application for Nelson Park Apartments. The Project Developer shall submit all finished work to the Technical Preservation Services department of the State Historic Preservation Office (SHPO) and must be approved by the SHPO and the National Park Service at Part 3 of the Historic Preservation Certification Application.

The Project Sponsor shall provide to CSD, the City of Columbus, and OHFA documentation of Part 3 submittal and approval.

Standard Mitigation Measures

21. Best Management Practices and Reasonably Available Control Measures [OAC Rule 3745-17-08(B)] shall be employed by the Contractor to control fugitive dusts during construction activities.

There should be no visible dust emitted from the project activities. Written documentation of notification and compliance shall be provided to the Project Sponsor, CSD, the City of Columbus, and OHFA, and kept in file documentation with the record.

22. All units shall be equipped with air conditioning systems.

The Project Sponsor shall confirm the presence of air conditioning systems prior to lease up. Written

Monitoring and Enforcement Procedures

documentation must be maintained.

23. Project personnel shall be notified, both verbally and through notations on the final construction drawings, that work shall be halted if indicators of contamination (fill other than "clean hard fill," discolored soils or chemical/petroleum odors) are identified during construction to allow for a qualified environmental professional to inspect the site and make recommendations regarding appropriate actions.

The Project Sponsor/Developer shall maintain documentation of contractor notification and shall ensure that notations are included on construction drawings. The Project Sponsor/ Developer shall notify CSD and the City of Columbus promptly if suspect contamination is identified on the project site. If suspect contamination is identified, no site development activities are to occur until testing and/or remedial actions have been concluded to the satisfaction of CSD and the City of Columbus. Documentation must be maintained with the record and provided to CSD, the City of Columbus, and OHFA.

24. Construction drawings/specifications shall be modified to include the following statement: "The Contractor shall at no time incorporate any materials that are composed of or contain any amount of asbestos. The substitution of materials that contain any amount of asbestos will in no circumstances be acceptable. Upon completion of the project, the Contractor and Project Architect shall submit written statements or certifications asserting that no asbestos containing materials were used in any portion of the construction."

The Project Sponsor/Developer shall ensure that the drawings/specifications include the required statement. Copies of the certifications from the Contractor and Project Architect shall be provided to the Property Manager, CSD, the City of Columbus,, OHFA, and kept in file documentation with the record.

25. Any proposed changes to the project must be conveyed to CSD, the City of Columbus, and OHFA promptly. The Environmental Review must be reevaluated by CSD, the City of Columbus, and OHFA prior to initiation of any proposed changes.

The Project Sponsor/Project Developer must maintain documentation in the record that any changes to the project have been reevaluated by CSD, the City of Columbus, and OHFA.

26. Project personnel shall be notified, both verbally and through notations on the final construction drawings, that work shall be halted and CSD, the City of Columbus, and OHFA notified immediately if archaeological resources or human remains are discovered during construction. All work with the potential to disturb soil at the project site must remain stopped until CSD, OHFA, OHPO, the City of Columbus and local law enforcement officials, as applicable, are satisfied that all appropriate actions have been taken.

The Project Sponsor/Developer shall maintain documentation of contractor notification and shall ensure that notations are included on construction drawings. The Project Sponsor/ Developer shall notify CSD, the City of Columbus, and OHFA promptly if archaeological resources or human remains are discovered on the project site, and shall not resume soil-disturbing activities until appropriate actions identified by local law enforcement officials and OHPO, as appropriate, have been concluded to the satisfaction of CSD, the City of Columbus, and OHFA. Documentation must be maintained with the record and provided to CSD, the City of Columbus, and OHFA.

27. If an additional phase or affiliated project is proposed by a member of the current project team, this additional work must be coordinated with OHPO, prior to initiation and regardless of the funding source.

For any additional phase, the Project Sponsor/Project Developer shall provide documentation of completed coordination with OHPO to CSD, the City of Columbus, OHFA and maintain documentation with the record.

28. Noise-producing construction activities should be avoided during the designated noise-sensitive period (10:00 pm to 7:00 am).

Contractors should be instructed to minimize noise. If complaints are received or noise-producing activity is noted during the designated noise-sensitive period, responsible action should be taken immediately. Documentation of notification must be maintained on file with the record and provided to the Project Sponsor, CSD, the City of Columbus, and OHFA.

29. The Property Manager shall notify prospective tenants that the unit was constructed as part of a federally funded project and that an environmental review of the project was completed as required

Monitoring and Enforcement Procedures

under the National Environmental Policy Act. The Property Manager shall advise tenants that the review will be maintained on file by the Project Sponsor throughout the tax credit period and is available for review by the prospective tenant.

The Project Sponsor shall ensure that, prior to lease signing, prospective tenants are notified that an environmental review was prepared and is available for review. If the offices of the Project Sponsor are located outside of the community in which the unit is located, the Project Sponsor shall ensure that a complete copy of the environmental review is provided directly to a prospective tenant desiring to review the document.

30. Unless the project provides documentation that it is exempt, a site-specific Storm Water Pollution Prevention Plan must be developed in accordance with the NPDES Construction Storm Water Permit, which will detail the appropriate Best Management Practices to control erosion until final site stabilization is achieved. In accordance with the construction storm water permit, site inspections must be conducted at least every 7 days and within 24 hours after a significant rain event. During the site inspections, erosion control measures should be observed to ensure they are functioning correctly.

The Storm Water Pollution Prevention Plan must be available on the site at all times during construction activities and available for review by CSD, the City of Columbus, OHFA or OEPA personnel upon request. Written documentation of the site inspections are to be maintained in the Storm Water Pollution Prevention Plan. Any corrections needed to address deficiencies identified during the site inspections must be implemented in a timely manner.

31. The Project will follow Occupational Safety and Health Administration (OSHA) recommendations and guidelines during construction activities to ensure worker and public safety. This will include safety equipment to be worn by workers and barriers to public access.

Work should be halted if violations of OSHA regulations and guidelines are noted and the Contractor should be required to correct the deficiency before work can resume.

32. Prior to move-in, management shall advise tenants, in person, of safety precautions, including use of locks and other safety features, 911 emergency service, and available neighborhood watch programs.

Evidence of notification shall be maintained by the Property Manager. Information regarding safety features shall be included in the New Tenant Package.

33. The Project Sponsor/Project Developer shall ensure that contractors arrange for proper disposal at appropriately-licensed facilities of all solid and/or hazardous waste generated by the construction, as well as any materials currently dumped on the property. The Property Manager shall either contract with a public or private hauler for removal of waste generated by the occupant households, or ensure that residents have arranged for trash removal with the local service provider. The Property Manager shall ensure that trash removal is arranged for residents who are not physically capable of removing their household wastes to the collection point.

The Project Sponsor should regularly inspect the project site. Waste should be accumulated in appropriate containers and removed from the site regularly. If debris is accumulating at the site, the Project Sponsor should instruct the Contractor to have it removed. The Property Manager shall either maintain records verifying use of a solid waste company that utilizes a licensed facility, or maintain records of routine inspections verifying that residents have established trash pickup. The Project Sponsor shall confirm that the Property Manager has screened residents to determine if assistance is required for trash removal and has maintained written records of the screening results.

34. A spill response kit should be present on the site during construction activities and chemical storage on-site should be minimized.

The presence of a spill response kit should be verified during site inspections.

Re: Nelson Park Apartments (1994 Maryland Avenue)

Dear Mr. Craig:

On March 10, 2022, Renewal Housing Associates presented to the Near East Area Commission (NEAC) in regards to the acquisition and rehabilitation of Nelson Park Apartments. NEAC voted to support the project in its application submission to the City of Columbus and the Ohio Housing Finance Agency (OHFA) for Housing Tax Credits and gap financing, with recommendations that the preliminary site plan be revised to move the entrance of the private access drive from the existing entrance closest to Nelson Road to the second existing entrance further west. The site plan has been revised by the developer and project architect to accommodate this request.

Sincerely,

A handwritten signature in black ink, appearing to read 'KDS', is positioned above the typed name.

Kate Curry-Da-Souza
Chair, Near East Area Commission

XII. Market Study Certification

Ohio Housing Finance Agency Market Study Certification

The undersigned, a recognized firm of independent market analysts knowledgeable and experienced in the development of affordable rental properties, completed this Market Study of Nelson Park for Renewal Housing Associates, LLC.

The market analyst does hereby state, in our best judgment, that a market exists for the proposed project as of August 3, 2022. The market analyst makes no guarantees or assurances that projections or conclusions in the study will be realized as stated.

To the best of our knowledge, all data contained in this report is correct to the extent that the local, State of Ohio, and federal recording agencies accurately record and publish this data. All projections were based on current professionally accepted methodology.

The market analyst has no financial interest in the proposed project. The fee assessed for the study was not contingent on the proposed project being approved by the Ohio Housing Finance Agency.

The market analyst made a physical inspection of the market area, reviewed all relevant data, and independently established the conclusions for this report.

NELSON PARK APARTMENTS

MARYLAND AVENUE, Columbus Ohio

By: Renewal Housing Associates, LLC

PROJECT GENERAL SCOPE AND OUTLINE SPECIFICATIONS

08/24/2023

RELATED DOCUMENTS

- A. Drawings, Specifications and General Provisions of the Contract, including General and Supplementary Conditions and other standard Division 01 Specification Sections are provided by the following. This document is only as an Outline of the proposed work.

SUMMARY

- B. Section Includes:
1. Project information.
 2. Work covered by Contract Documents.
 3. Phased construction.
 4. Access to site.
 5. Coordination with occupants.
 6. Work restrictions.
 7. Specification and Drawing conventions.

PROJECT INFORMATION

- C. The **PROJECT** is currently referred to as **NELSON PARK APARTMENTS**, located at 1994 Maryland Avenue, Columbus, Ohio 43219.
- D. Developer: Renewal Housing Associates, LLC. 2 Union Street Suite 500, Portland Maine 04101.
- E. Architect: Berardi+Partners, Inc., located at 1398 Goodale Boulevard, Columbus, Ohio 43212
- F. Architect's Consultants: Architect has retained the following design professionals who have prepared designated portions of the Contract Documents:
1. CIVIL Engineer: Korda Engineering, Columbus, Ohio
 1. Chris Fleming, PE, LEED AP
 2. STRUCTURAL Engineering: Derwacter Associates, Zanesville, Ohio
 1. Matt Derwacter, PE
 3. MEP/ Engineering: Berardi + Partners, Inc., Columbus, Ohio
 4. LEED Consultant: SOL Design and Consulting. Cleveland, Ohio 44114.
- G. General Contractor: Drake Construction, Cleveland, Ohio

WORK DEFINED BY PROPOSED CONSTRUCTION DOCUMENTS

While the total of the Contract Documents is defined to include all Construction Drawings and Specifications (the latter termed as the Project Manual) in their final state, this document anticipates

including information defined in general terms by this Outline Specification, for all work scheduled to complete the substantial rehabilitation and repositioning of the Project. However, it is also understood that 'final' Project Scope Contract Documents will also include the including all drawings, specifications (the Project Manual), amendments, addenda, bulletins, Architect's Supplemental Instructions (ASIs) and other record of changes to the work including Change Orders (COs).

The work as anticipated at the date of the OHFA Application otherwise defined as follows:

A. Sitework:

1. Site Demolition and New Construction:

- a. Remove all existing 'underground' waterline service throughout the property to each building entry point, from the connection to the public utility, as indicated by Drawings C102, C103 and C104.
- b. Remove all existing underground sanitary sewer service throughout the property to each building entry point, from the connection point to the public utility, as indicated by the survey locations.
 - Remove all sanitary sewer structures on site.
- c. Remove all sidewalks as indicated by the site plans.
- d. Remove all existing curb cuts to Maryland Avenue as indicated by the site plans.
- e. Grind and resurface all asphalt parking areas, re-stripe parking (including accessible compliant areas).
- f. Remove all landscaping deemed to be overgrown or in conflict with proposed new internal traffic patterns.
- g. Install new water distribution system to be coordinated with City of Columbus subject final design TBD.
- h. Install new sanitary sewer service as indicated by conceptual planning.
- i. Complete all new site lighting with LED fixtures to be building mounted, and pole mounted at certain other locations to avoid blind dark areas.

2. Building Exterior Demolition and New Additions:

1. Building Envelope Demolition:
 - a. Remove all existing rear unit doors.
 - b. Remove and replace all exterior doors and hardware and all windows.
 - c. Remove all roofing, to be replace with new warranted roofing materials.
 - d. Tuckpoint 10% of existing masonry.
 - e. Scrape and paint 100% of existing door and window lintels.
 - f. Replace existing thru-wall air conditioner unit sleeves.

3. Remove existing Buildings:

1. Remove existing residential and storage/maintenance buildings as indicated by Drawing Sheet AS100.

B. Townhomes and Stacked 1-BR Dwellings DEMOLITION AND NEW CONSTRUCTION:

1. Complete all demolition of all unit areas as described by preliminary 'demolition' plans, including existing party wall 'masonry' locations.

Complete renovation of all dwelling units to include accessible Type A units, new walls, interior doors, new bathroom plans/fixtures and fitting, new kitchen plans complete with all appliances, grease shields at ranges. Electrical panel location to be as indicated. Provide all ADA fixtures, fittings, and accessible controls.

2. Remove and replace all unit flooring luxury vinyl plank (LVP) throughout all unit areas, including bathrooms. Provide carpet in bedrooms as an alternate.
3. Provide firestopping, miscellaneous caulking and sealant at all new assemblies created by overlapping unit spaces to be separated by 1-hour assemblies.
4. Install new stacked Washer/Dryer locations as indicated.
5. Remove and replace windowsills throughout.
6. Remove and replace existing entry canopy's and concrete stoops at Elderly Building types for ADA compliance.
7. Remove and replace existing windows per scope with new aluminum windows.
8. Remove and replace all interior doors including closet locations.
9. Remove and replace all exterior unit entrance doors and frames throughout.
10. Provide new accessible compliant door hardware throughout.
11. Install access panels coordinated with new plumbing services.
12. Paint all dwelling unit walls, ceilings, and bulkheads.
13. Remove and replace toilet accessories throughout.
14. Provide new countertops and microwave ovens throughout.
15. Install all new mechanical and plumbing fixtures and fittings throughout, consistent with proposed plans.
16. Provide all ADA compliant unit for each dwelling unit type, including new 2-BR and 3-BR unit first floor bedroom/bath arrangements as well as all 1-BR first floor dwelling locations.
17. Provide ADA addition on (4) building units per drawings.
18. Include 2% of units to be fitted for hearing and visually impaired clients.
19. Remove and replace all unit shut off valves consistent with new plumbing plans.
20. Install heating and air conditioning equipment, with interlock controls throughout.
21. Remove and replace bathroom exhaust fan and install smart switch throughout.
22. Remove and replace thru-wall air conditioners and sleeves. Provide interior wall finished flush to existing walls. Provide exterior decorative wall panel installed at exterior brick veneer façade. Infill wall cavity section with 6" batts.
23. Install all GFCI outlet per current electrical codes throughout.
24. Provide new light fixtures at new locations throughout and install all smoke and heat detectors in accordance with current electrical codes.
25. Develop a Community Building with renovation of existing buildings 44 and 45 at corner of Sunbury RD and Maryland Avenue to be approximately 2,500 square feet.
26. Develop a Maintenance Building with renovation of existing buildings 43 at corner of Sunbury RD and Maryland Avenue.
27. Develop garden areas and landscape buffers at the area designated Elderly Housing.
28. Develop small child play areas at available site areas in the vicinity of the Family Housing.

C. Type of Contract:

1. Project will be constructed under a single prime contract with Drake Construction.

PHASED CONSTRUCTION

- D.** The intent is for the project to be completed in phases, considering the new assignment of the Elderly Component at the west end, with all Family located at the east end. Please refer to the Drake Construction Phasing Plan, for timing and availability of units.
- i. Phases shall be coordinated with Owner, Architect, and authority having jurisdiction prior to start of work.
 - ii. Before commencing construction for each phase, the Contractor shall submit an updated copy of the construction schedule indicating sequencing, commencement, and completion dates, and move-out and move-in dates to Owner's personnel for review and approval of the work proposed.

ACCESS TO SITE

- iii. The General Contractor shall have use of Project site strictly limited for designated construction operations only.
- iv. Uses will be limited to the Project site areas identified within the Contract limits indicated. Portions of Project site beyond areas in which the work is to be completed shall not be disturbed, unless previously identified. And upon completion of access to 'limited use' areas, those site portions shall be returned to their original state or as agreed to be the Owner.
 1. Phasing turnover of vacant units to be reviewed and coordinated with the Owner.
 2. Renovation of major systems (new Site Utilities) serving each phase to be designated shall be reviewed and coordinated with Owner.
 3. Contractor shall have limited access to parking lots, to be coordinated with the Owner for the number of parking spaces available.
 - a. Schedule deliveries to minimize use of driveways and entrances by construction operations and shall be coordinated with the City of Columbus for temporary closure/blockage for any portion of Maryland Avenue.
 - b. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.
- v. The Contractor shall secure portions of any existing building affected by construction operations, for which weathertight conditions are to be maintained throughout the construction period. Repair damage caused by construction operations.
- vi. The Contractor shall maintain all portions of the grounds, landscaping, and hardscaping affected by construction operations throughout construction period. Repair damage caused by construction operations.

COORDINATION WITH OCCUPANTS

- vii. The Owner will retain partial occupancy of the site and designated buildings, during the entire construction period. In view of this partial

retention of occupancy, the Contractor shall provide all safety and security protocols, coordinating all requirements with the Owner during construction operations, especially necessary to avoid hazardous conditions, and avoiding conflicts especially related to vehicular traffic. The forgoing will be required for the Owner to maintain use of designated project areas without interference of normal operations.

1. Maintain access to existing sidewalks to remain, especially the principal sidewalk at Maryland Avenue. Occupied site portions to be maintained during phased construction shall not be obstructed for access.
2. The Contractor shall coordinate directly with the Owner, all phasing of site and building portion access required to conduct normal construction operations. The Owner shall be notified well in advance of impending construction operations which may impede traffic and pedestrian flow.

WORK RESTRICTIONS

- viii. Work Restrictions, General: Comply with restrictions on construction operations.
 1. Comply with limitations on use of public streets and with other requirements of authorities having jurisdiction.
- ix. On-Site Work Hours: Limit work in the existing building to normal business working hours of 7:00 a.m. to 6:00 p.m., Monday through Friday, unless otherwise indicated.
 1. Weekend Hours: with permission from Owner.
 2. Hours for Utility Shutdowns: Coordinate with Owner, provide 48 hours notice.
- x. Since new water and sanitary sewer will be constructed, it is essential that the Contractor coordinate phasing of the work for areas that will remain occupied. Existing utilities serving buildings to remain occupied shall be retained in a state to avoid any reduction of service.
 1. Notify Owner not less than two days in advance of proposed utility interruptions.
- xi. Restricted Substances: Use of tobacco products and other controlled substances within the existing building is not permitted.

E. GENERAL SPECIFICATION AND DRAWING CONVENTIONS

- i. Specification Content: This Outline Specifications and the subsequent completion of the 'final' Project Manual will use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
 1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.

2. Specification requirements are to be performed by Contractor unless specifically stated otherwise.
- ii. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.
- iii. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:
 1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
 2. Abbreviations: Materials and products are identified by abbreviations published as part of the U.S. National CAD Standard and scheduled on Drawings.
 3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

END OF OUTLINE SPECIFICATION

Nelson Park Apartments (22-0267) Franklin Co., Columbus, OH

1. View of existing bridge and forested area adjacent to western side of project site along Sunbury Road, looking west.

2. View of western portion of project site along Sunberry Road, looking south.

3. View of existing apartment building along Sunbury Road proposed for redevelopment as a community building, looking east.

4. View of Sunbury Road and forested areas along the eastern/northeastern border of the project site, looking northwest.

5. View of existing apartment buildings proposed for redevelopment as a community and maintenance building, looking southwest.

6. View of Columbia Gas building located on the northwest portion of the project site, looking northeast.

7. View of project site, looking east.

8. View of concrete slabs located on hill in the western portion of the project site, looking west.

9. View of project site, looking east.

10. View of existing dilapidated retaining wall to be replaced within the project site, looking north.

11. Representative view of shrub vegetation located behind the existing apartment buildings at 1900, 1902, 1904, 1906, 1912, 1914, 1916, 1918, 1922, and 1924 Maryland Avenue, looking northeast.

12. View of project site along the southern border, looking west.

13. View of project site along the southern border, looking east.

14. Representative view of residential neighborhood adjacent to the southern border of project site, looking south

15. Representative view of front side of existing apartment buildings within the project site, looking north

16. Representative view of side of existing apartment building within the project site, looking west.

17. Representative view of parking lot located between existing apartment buildings within the project site, looking north.

18. View project site along the northern border, looking east.

19. View of Amazon warehouse facility located along the northern border of the project site, looking northwest.

20. View of existing playground located on project site, looking southeast.

21. View of project site, looking west.

22. View of project site, looking northeast.

23. View of courtyard between existing apartment buildings within the project site, looking north.

24. View of project site, looking west.

25. View of project site, looking east.

26. View of project site, looking north.

27. View of project site along the northern border, looking west.

28. View of project site along southern border, looking west.

29. View of project site along southern border, looking east.

30. View of residential courtyard in project site, looking north.

31. View of existing maintenance shed to be demolished, looking northwest.

32. View of parking lot for Amazon Facility adjacent to northern border of the project area, looking north

33. View of project area along eastern edge, looking north.

34. View of eastern adjacent property from the southeastern corner of the project site, looking east.

35. View of southeastern adjacent land uses from the southeastern corner of project site, looking southeast.

36. View of project site along southern border, looking west.

37. View of potential Indiana bat and Northern Long-eared bat roost tree, a 40" dbh silver maple exhibiting a cavity, looking east.

38. View of potential Indiana bat and Northern Long-eared bat roost tree, 2 26" dbh Chinese elm exhibiting peeling bark, looking north.

39. View of potential Indiana bat and Northern Long-eared bat roost tree, a 26" dbh Chinese elm exhibiting peeling bark, looking southeast.

40. View of potential Indiana bat and Northern Long-eared bat roost tree, a 22" dbh Chinese elm exhibiting peeling bark, looking north.

41. View of potential Indiana bat and Northern Long-eared bat roost tree, a 66" dbh American sycamore exhibiting peeling bark, looking northwest.

42. Representative view of kitchen located at the existing apartments in the project site.

43. Representative photo of living room/kitchen entrance currently at existing apartments.

44. Representative photo of bathroom located at the existing apartments in the project site.

45. View of the existing community center located at the existing apartment in the project area.

46. View of maintenance garage located toward the east side of the project area.

47. Representative view of hallway to bedroom and bathroom at the existing apartment in the project area.

48. Representative view of bedroom located at the existing apartment in the project area.

FIRST AND SECOND FLOOR PLAN - BUILDING 'B' A101.b

BERARDI+
 ARCHITECTURE | INTERIOR DESIGN | ENGINEERING
 1598 GOODALE BOULEVARD, COLUMBUS, OHIO 43219
 P: 614.221.1110 | berardipartners.com

2ND FLOOR PLAN - BLDG 'C' 1/4" = 1'-0"

ASSOCIATED BUILDING NUMBERS =
2,3,7,10,12,14,15,16,18,19,22,25,28

1ST FLOOR PLAN - BLDG 'C' 1/4" = 1'-0"

- general notes: floor plans
1. REFERENCE CIVIL PLANS FOR ACTUAL FINISHED FLOOR ELEVATION. REFERENCE POINT OF 1000' USED ON ARCHITECTURAL DRAWINGS FOR FINISHED FLOOR ELEVATION.
 2. ALL DIMENSIONS ARE TO FACE OF STUD UNO.
 3. ANYWHERE THIS SYMBOL (M) APPEARS IN A DIMENSION STRING, IT INDICATES THE DIMENSION IS 1/2".
 4. UNLESS INDICATED OTHERWISE, ALL DOORS TO BE A MINIMUM OF 4" TO ROUGH JAMB FROM ROUGH FRAMING INTERSECTION.
 5. REFERENCE - SHEETS FOR FLOOR FINISH PLANS.
 6. REFERENCE A300 SHEETS FOR ENLARGED UNIT PLANS & UNIT REFLECTED CEILING PLANS.
 7. ALL DIMENSIONS ARE TO BE FIELD VERIFIED.
 8. PROVIDE U/L APPROVED FIRE STOPPING AS REQUIRED AT ALL PENETRATIONS LOCATED WITHIN ALL UNIT COMMON DIMENS WALLS, CEILING FIRE RESISTIVE ASSEMBLIES AND AT ALL OTHER FIRE-RESISTIVE RATED ASSEMBLIES.
 9. ALL GYP BD ON WALLS AND CEILINGS WITHIN BATHROOMS SHALL BE MOISTURE RESISTANT TYPE COMPLYING WITH THE FIRE RESISTANCE RATED ASSEMBLY.
 10. COORDINATE INTERIOR WALL THICKNESS, BATT INSULATION AND GYPSUM BOARD REQUIREMENTS WITH OVERALL FLOOR PLANS, ENLARGED UNIT PLANS, AND WALL TYPE SHEETS.
 11. ENSURE ALL DUCT WORK, PLUMBING COMPONENTS, ETC ARE ISOLATED FROM ALL METAL FRAMING AND WALL FINISHES.
 12. UNRATED WALL AND CEILING ASSEMBLIES SHALL NOT INTERRUPT RATED WALL, FLOOR/CEILING, ETC ASSEMBLIES.

KEYNOTES

05.70C	EXISTING VERTICAL DECORATIVE METAL BAR SUPPORT- CLEAN, PREP AND REPAIR AS NEEDED FOR NEW PAINT
07.30A	R/R EXISTING ASPHALT SHINGLES AND ROOFING FELT WITH NEW 30 YEAR DIMENSIONAL SHINGLES ON 15# ROOFING FELT. INSPECT EXISTING ROOF SHEATHING FOR DAMAGE AND REPLACE AS NEEDED.
07.40B	CEMENTITIOUS SIDING
07.40F	R/R EXISTING LAP SIDING
07.40G	R/R EXISTING CORNER TRIM
07.40H	R/R EXISTING WALL PANEL
07.40I	R/R EXISTING 1X8 ALUMINUM COVERED FASCIA
07.60C	R/R EXISTING SHEET METAL FLASHING
07.60E	R/R EXISTING STEEP FLASHING
07.70D	PREFINISHED MANUFACTURED ALUMINUM SCUPPER WITH CONDUCTOR HEAD AND DOWNSPOUT
07.70E	R/R EXISTING PRE-FINISHED ALUMINUM GUTTER, DRIP FLASHING AND FASCIA BOARD
07.70F	R/R EXISTING PRE-FINISHED ALUMINUM DOWNSPOUT
07.70G	EXTEND NEW EPDM MEMBRANE ROOFING UP EXISTING WALL AND TERMINATE WITH NEW TERMINATION BAR SET IN MORTAR @ 8' MIN. ABOVE FINISH ROOFING
07.70H	R/R EXISTING FLASHING WITH NEW PREFINISHED METAL 'Z' FLASHING WITH TERMINATION BAR SET IN MORTAR @ 8' MIN. ABOVE FINISH ROOFING
07.70J	PREFINISHED ALUMINUM COPING/ PARAPET GAP
08.90A	R/R EXISTING GABLE END LOUVER

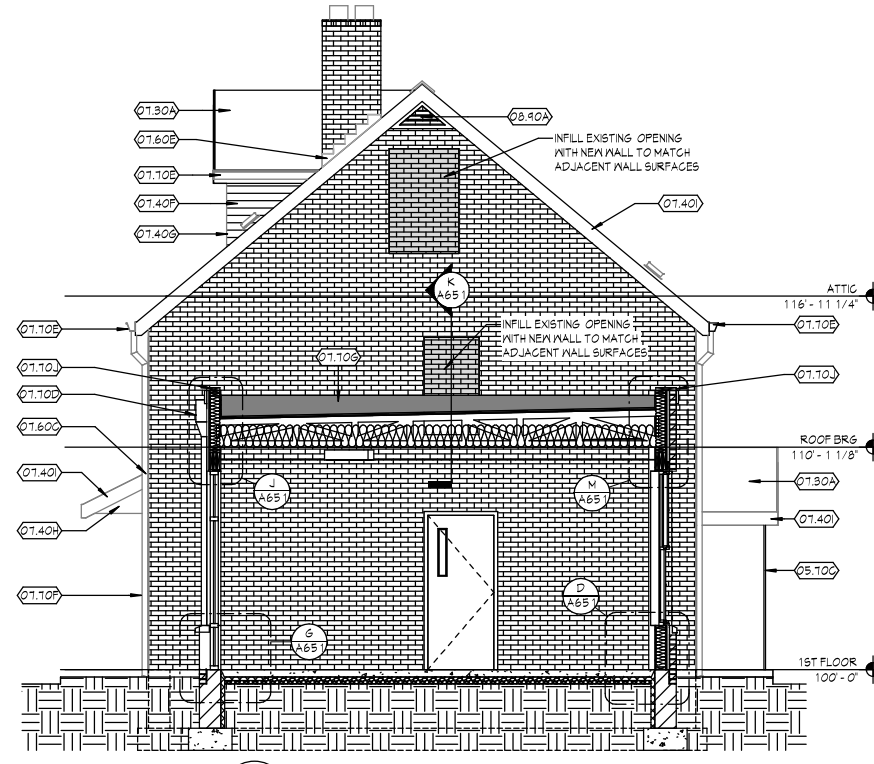

- general notes: elevations
1. R/R ALL EXISTING EXTERIOR DOORS (SHOWN TO REMAIN) WITH NEW INSULATED METAL DOORS. REFER TO DOOR SCHEDULE SHEET A100A FOR DOOR TYPES AND SIZES (FIELD VERIFY ALL EXISTING ROUGH OPENINGS PRIOR TO FABRICATION).
 2. R/R ALL EXISTING EXTERIOR DOOR HARDWARE. REFER TO DOOR SCHEDULE SHEET A100B AND SPECIFICATIONS FOR HARDWARE SETS.
 3. R/R ALL EXISTING WINDOWS (SHOWN TO REMAIN) WITH NEW VINYL HISTORY REPLACEMENT WINDOWS. REFER TO WINDOW SCHEDULE SHEET A100A FOR WINDOW TYPES AND SIZES (FIELD VERIFY ALL EXISTING OPENINGS PRIOR TO FABRICATION).
 4. CLEAN, PREP AND PAINT ALL EXISTING STEEL LINTELS.
 5. POWERWASH ENTIRE EXISTING BRICK/MASONRY FACADE. CLEAN OUT ALL EXISTING NEEPS AND INSTALL NEW KEEF HOLE VENTS WHERE INDICATED.
 6. PROVIDE AN ALLOWANCE TO TUCKPOINT UP TO (XXX) LINEAR FEET OF JOINT/(XXX) SQUARE FEET OF BRICK PER BUILDING.
 7. R/R ALL EXISTING LAP SIDING (INCLUDING EXTERIOR WEATHER BARRIER), SOFFITS AND TRIM. PREP/REPAIR EXISTING EXTERIOR SHEATHING FOR INSTALLATION NEW LAP SIDING. INCLUDE AN ALLOWANCE UP TO (XXX) SQUARE FEET PER BUILDING TO REPLACE EXISTING EXTERIOR SHEATHING WITH NEW 1/2" APA RATED OSB SHEATHING.
 8. R/R ALL EXISTING ALUMINUM GUTTERS, DRIP FLASHING, FASCIA, DOWNSPOUTS AND DRAINAGE BOOTS. FINISH TO MATCH EXISTING. ALL EXISTING DOWNSPOUT DRAINAGE LEADERS ARE TO BE SCOPED AND JET CLEANED TO DAYLIGHT OR TO STORM DRAINAGE SYSTEM.
 9. POWERWASH ALL EXISTING PORCH CANOPIES, WALL AND SOFFIT PANELS (SHOWN TO REMAIN). CLEAN, PREP AND REPAIR ALL EXISTING DECORATIVE STEEL SUPPORTS FOR NEW PAINT.
 10. REMOVE, REPAIR, REFINISH AND REINSTALL ALL EXISTING WALL MOUNTED FRONT PORCH ADDRESS LIGHT FIXTURES (SHOWN TO REMAIN), WHERE NOT SHOWN TO REMAIN, FILL-IN ANY VOIDS LEFT BY REMOVAL WITH BRICK. UPGRADE FIXTURE WITH NEW LED TYPE LAMPS AND PHOTOCELLS.
 11. R/R EXISTING ROOF SHINGLES WITH NEW 30-YEAR DIMENSIONAL SHINGLES, INCLUDING NEW ROOFING FELT/UNDERLAYMENT, DRIP EDGE FLASHING, VALLEY FLASHING, STEP AND COUNTER FLASHING, ROOF PENETRATION FLASHING AND VENTS. INSTALL NEW ICE GUARD AT EAVES AND VALLEYS AND PROVIDE 15# ROOF UNDERLAYMENT OVER EXISTING ROOF SHEATHING. REPAIR/PREP EXISTING ROOF SHEATHING AS NEEDED FOR NEW ROOFING. INCLUDE AN ALLOWANCE UP TO (XXX) SQUARE FEET PER BUILDING TO REPLACE EXISTING ROOF SHEATHING WITH NEW 1/2" APA RATED PLYWOOD SHEATHING.
 12. R/R ALL EXISTING GABLE END LOUVERS (TO MATCH EXISTING).
 13. R/R ALL SEALANTS AND CAULKING AT ALL EXISTING PENETRATIONS AND JOINTS, INCLUDING BUT NOT LIMITED TO THE FOLLOWING:
 - a. JOINTS AROUND PENETRATION AND DOOR FRAMES.
 - b. JOINTS BETWEEN WALLS AND FOUNDATIONS.
 - c. BETWEEN WALLS AT BUILDING CORNERS, BETWEEN WALLS AND STRUCTURAL FLOORS OR ROOFS AND BETWEEN WALL AND ROOF OR WALL PANELS.
 - d. OPENINGS AT PENETRATIONS OF UTILITY SERVICES THROUGH ROOFS, WALLS AND FLOORS.
 - e. JOINTS, SEAMS AND PENETRATIONS OF VAPOR RETARDERS.
 14. ALL EXISTING GAS METERS AND PIPING TO REMAIN (UNLESS SHOWN OTHERWISE). CLEAN, PREP AND PAINT. SEE MECHANICAL DRAWINGS.
 15. R/R ALL EXISTING AC UNITS AND HOUSEKEEPING PAD. REMOVE AND REINSTALL ALL EXISTING SECURITY CASES. SEE MECHANICAL DRAWINGS.
 16. REMOVE ALL EXISTING THRU-WALL AC UNITS. INFILL EXISTING WALL OPENING WITH NEW BRICK WALL CONSTRUCTION (BRICK TO MATCH EXISTING). SEE MECHANICAL DRAWINGS FOR LOCATIONS.
 17. REMOVE EXISTING AIR INTAKE LOUVERS (AT EXISTING LAUNDRY BUILDING). INFILL EXISTING WALL OPENING WITH NEW BRICK WALL CONSTRUCTION (BRICK TO MATCH EXISTING). SEE MECHANICAL DRAWINGS FOR LOCATIONS.
 18. R/R ALL EXISTING KITCHEN, BATHROOM AND LAUNDRY EXHAUST VENTS. SEE MECHANICAL DRAWINGS.
 19. R/R ALL EXISTING ELECTRICAL COMMUNICATIONS CONDUIT/CABLING. FILL-IN ALL PENETRATIONS. SEE ELECTRICAL DRAWINGS.
 20. R/R ALL EXISTING ELECTRICAL METERS. SEE ELECTRICAL DRAWINGS.
 21. ALL EXISTING HOSE BIBS TO REMAIN. REPAIR AS NECESSARY.
 22. CLEAN, PREP AND PAINT ALL EXISTING STEEL PIPE BOLLARDS SHOWN TO REMAIN. SEE CIVIL DRAWINGS.
 23. R/R ALL EXISTING EXTERIOR WALL MOUNTED SIGNAGE. SEE CIVIL AND SIGNAGE DRAWINGS.

OFFICE BLDG - 2ND FLOOR DEMO 1/4" = 1'-0"

OFFICE BLDG -1ST FLOOR DEMO 1/4" = 1'-0"

general notes: floor plans

- A. THESE DRAWINGS AS PART OF THE DOCUMENTS SHALL BE VIEWED AND CONSIDERED AS A GENERAL GUIDELINE. ALL DRAWING INFORMATION PROVIDED IS BASED UPON LIMITED FIELD DIMENSIONAL VERIFICATION AND INFORMATION PROVIDED BY OTHERS - EXISTING DRAWINGS AND PRELIMINARY DESIGN DOCUMENTS. PREPARED DRAWINGS ARE BASED UPON A REASONABLE LEVEL OF VERIFICATION OF EXISTING CONDITIONS INCLUDING FINISHES ETC. IN THE EVENT DIMENSIONAL VARIATIONS, OBSCURED CONDITIONS NOT READILY VIEWED OR ACCESSIBLE UNTIL THE DEMOLITION PROCESS HAS BEGUN, OR FINISH VARIATIONS ARE DISCOVERED - SUBSTANTIAL VARIATIONS SHALL BE REVIEWED IMMEDIATELY WITH THE OWNER'S REPRESENTATIVE AND ARCHITECTS FIELD PERSONNEL. MINOR FRACTIONAL VARIATIONS SHALL BE RECORDED AS A MATTER OF COURSE AND DISPATCHED IN AN ORDERLY FASHION TO THE OWNER'S REPRESENTATIVE AND OTHER FIELD PERSONNEL.
- B. THE DEMOLITION DRAWINGS PROVIDE GENERAL DEMOLITION GUIDELINES AND MAY NOT BE INCLUSIVE OF ALL ITEMS, MATERIALS, SYSTEMS, ETC. REQUIRED TO BE REMOVED IN ORDER TO COMPLETE THE SCHEDULED NEW CONSTRUCTION. IN THE EVENT THAT SYSTEMS/ITEMS DISCOVERED DURING DEMOLITION REQUIRE REMOVAL FOR IMPLEMENTATION OF THE NEW WORK, IT IS THE CONTRACTOR'S RESPONSIBILITY TO COMPLETE SUCH REMOVAL, AND COORDINATE PROPOSED NEW CONSTRUCTION WITH SAID REMOVAL.
- C. GENERAL SCOPE OF DEMOLITION WORK SHALL INCLUDE REMOVAL OF ALL EXISTING CONSTRUCTION, FINISHES, MECHANICAL/ELECTRICAL/PLUMBING SYSTEMS, ETC. AS REQUIRED FOR IMPLEMENTATION OF NEW PLAN AND FINISHES.
- D. THE CONTRACTOR SHALL ENSURE THE TOTAL SAFETY, HEALTH, AND WELFARE OF ALL INDIVIDUALS WITHIN THE BUILDING PORTIONS IN WHICH DEMOLITION AND SUBSEQUENT RECONSTRUCTION IS SCHEDULED TO OCCUR. PROVIDE ALL NECESSARY MEANS OF EGRESS, BARRICADES, PROTECTIVE SCREEN SHORING, ETC. AS NECESSARY.
- E. ALL DEBRIS, EXISTING OR RESULTING FROM SCHEDULED CONSTRUCTION DURING THE COURSE OF THE WORK, SHALL BE REMOVED FROM THE PROJECT AREA ON A DAILY BASIS. ALL SPACES INCLUDING STAIRS AND CORRIDORS SHALL BE MAINTAINED AND LEFT IN A BROOM CLEAN CONDITION DAILY.
- F. ALL FIXTURES AND EQUIPMENT REMOVED SHALL BE CONSIGNED TO THE GENERAL CONTRACTOR FOR REUSE AS SALVAGED MATERIALS OR DISPOSAL AS REQUIRED. ALL INTERIOR DOORS, LIGHT FIXTURES, BUILT-IN CABINETS AND ANY ITEMS WHICH MAY BE DESIGNATED AS SALVAGEABLE DURING THE CONSTRUCTION PERIOD, SHALL BE THE RESPONSIBILITY OF THE GENERAL CONTRACTOR TO CATALOGUE AND PROVIDE STORAGE AND PROTECTION FOR ALL SUCH MATERIALS INTENDED FOR REUSE.
- G. ALL EXISTING ELECTRICAL, PLUMBING, AND HEATING SYSTEMS SCHEDULED TO BE REMOVED SHALL BE REMOVED, CAPPED, OR SEALED AS REQUIRED FOR THE CONTRACTOR TO IMPLEMENT THE NEWLY SCHEDULED WORK. SEE ELECTRICAL, HVAC, AND PLUMBING DRAWINGS FOR ADDITIONAL INFORMATION.
- H. IN THE EVENT THAT UNCOVERED CONDITIONS ARE CONSIDERED DEFECTIVE OR OTHERWISE DISSIMILAR TO ANTICIPATED CONDITIONS, THE CONTRACTOR SHALL NOTIFY THE ARCHITECT AND ENGINEER IMMEDIATELY AND FOLLOW WITH A WRITTEN MEMORANDUM PRIOR TO ANY BALANCE OF SCHEDULED WORK. IN ANY GIVEN AREA THE ARCHITECT/ENGINEER SHALL PERFORM INVESTIGATION SUFFICIENT TO DETERMINE STRUCTURAL INTEGRITY OF THE GIVEN COMPONENT.
- I. ALL EXISTING WALL AREAS WHICH WERE PREVIOUSLY INTERSECTED BY OTHER WALLS, ETC. SHALL BE REPAIRED. REMOVE OLD MATERIALS TO A POINT WHERE NEW FINISH MATERIAL CAN BE EFFECTIVELY APPLIED TO A SOUND FIRM BASE. ALL OTHER CRACKED AND DAMAGED WALL AREAS SHALL BE REPAIRED SIMILARLY PRIOR TO THE APPLICATION OF FINAL WALL FINISHES. CONSIDER SPECIFICALLY REMOVAL OF ANY DRYWALL TO FRAME PRIOR TO PROCEEDING WITH FINAL FINISHES.
- J. ALL FLOOR AREAS UPON WHICH PREVIOUS WALLS WERE LOCATED SHALL BE REPAIRED BY THE REMOVAL OF LOOSE DEBRIS (FOLLOWING PARTITION REMOVAL) AND RESURFACED TO CAUSE THE NEW FINISH FLOOR LEVEL TO BE A SMOOTH TRANSITION BETWEEN MAINTAINED FLOOR AREAS AND REPAIRED POINTS.
- K. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL EXISTING UTILITIES AND STRUCTURES BOTH VISIBLE AND OBSCURED BY OTHER ASSEMBLIES SUCH AS PAVEMENT, BUILT STRUCTURES, ETC. AT THE COMPLETION OF DEMOLITION. GENERAL CONTRACTOR SHALL BE FINANCIALLY RESPONSIBLE FOR ANY AND ALL PREPARATION REQUIREMENTS WHICH MAY RESULT FROM DAMAGE DURING THE CONSTRUCTION OF THE WORK SCHEDULED BY THE DEVELOPMENT PLANS.
- L. ALL DEMOLITION SCHEDULED BY THESE DOCUMENTS, OR AS MAY OTHERWISE BE REQUIRED BY PREVIOUSLY UNFORESEEN CONDITIONS, SHALL BE COORDINATED BY THE GENERAL CONTRACTOR WITH ALL TRADESMAN AND WITH FINAL DRAWINGS OR MODIFICATIONS THERE TO, TO DETERMINE THE FINAL EXTENT OF THE REQUIRED WORK.
- M. ALL EXISTING MEANS OF EGRESS AND ALL FIRE PROTECTION FEATURES ARE TO BE MAINTAINED DURING ALL PHASES OF WORK.
- N. ANY DEMOLITION THAT INVOLVES REFRIGERANT OR OTHER HAZARDOUS MATERIALS SHALL BE CONDUCTED IN ACCORDANCE WITH ALL AUTHORITIES HAVING JURISDICTION OVER THE REMOVAL, CONTAINMENT AND DISPOSAL OF HAZARDOUS MATERIALS. REMOVE, STORE AND DISPOSE OF REFRIGERANT ACCORDING TO 40 CFR 82 AND REGULATIONS OF ALL AUTHORITIES HAVING JURISDICTION INCLUDING ALL EPA REGULATIONS AND PROCEDURES.
- O. CONTRACTOR TO ENSURE THAT ALL HISTORIC ELEMENTS, INCLUDING BUT NOT LIMITED TO FABRIC, FINISHES, MATERIAL, COMPONENTS, ETC. SHALL BE PROTECTED FROM DAMAGE DURING THE DEMOLITION AND/OR CONSTRUCTION PROCESS. ANY DAMAGE AS A RESULT OF HISTORIC ELEMENTS NOT BEING PROPERLY PROTECTED FROM DAMAGE SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND/OR TRADES RESPONSIBLE FOR THE DAMAGE. ALL DAMAGED HISTORIC ELEMENTS SHALL BE PLACED IN LIKE NEW DEFECT FREE CONDITION WITH NO COST INCURRED BY THE OWNER.
- P. ALL NEW AND EXISTING THROUGH PENETRATIONS AT FIRE RATED ASSEMBLIES (FLOOR/CEILING AND/OR WALL ASSEMBLIES) SHALL BE PROTECTED WITH APPROVED FIRESTOPPING MATERIAL.

general notes: floor plans

- A. THESE DRAWINGS AS PART OF THE DOCUMENTS SHALL BE VIEWED AND CONSIDERED AS A GENERAL GUIDELINE. ALL DRAWING INFORMATION PROVIDED IS BASED UPON LIMITED FIELD DIMENSIONAL VERIFICATION AND INFORMATION PROVIDED BY OTHERS - EXISTING DRAWINGS AND PRELIMINARY DESIGN DOCUMENTS. PREPARED DRAWINGS ARE BASED UPON A REASONABLE LEVEL OF VERIFICATION OF EXISTING CONDITIONS INCLUDING FINISHES ETC. IN THE EVENT DIMENSIONAL VARIATIONS, OBSCURED CONDITIONS NOT READILY VIEWED OR ACCESSIBLE UNTIL THE DEMOLITION PROCESS HAS BEGUN, OR FINISH VARIATIONS ARE DISCOVERED - SUBSTANTIAL VARIATIONS SHALL BE REVIEWED IMMEDIATELY WITH THE OWNER'S REPRESENTATIVE AND ARCHITECT'S FIELD PERSONNEL. MINOR FRACTIONAL VARIATIONS SHALL BE REGARDED AS A MATTER OF COURSE AND DISPATCHED IN AN ORDERLY FASHION TO THE OWNER'S REPRESENTATIVE AND OTHER FIELD PERSONNEL.
- B. THE DEMOLITION DRAWINGS PROVIDE GENERAL DEMOLITION GUIDELINES AND MAY NOT BE INCLUSIVE OF ALL ITEMS, MATERIALS, SYSTEMS, ETC., REQUIRED TO BE REMOVED IN ORDER TO COMPLETE THE SCHEDULED NEW CONSTRUCTION. IN THE EVENT THAT SYSTEMS/ITEMS DISCOVERED DURING DEMOLITION REQUIRE REMOVAL FOR IMPLEMENTATION OF THE NEW WORK, IT IS THE CONTRACTOR'S RESPONSIBILITY TO COMPLETE SUCH REMOVAL, AND COORDINATE PROPOSED NEW CONSTRUCTION WITH SAID REMOVAL.
- C. GENERAL SCOPE OF DEMOLITION WORK SHALL INCLUDE REMOVAL OF ALL EXISTING CONSTRUCTION FINISHES, MECHANICAL/ELECTRICAL/PLUMBING SYSTEMS, ETC. AS REQUIRED FOR IMPLEMENTATION OF NEW PLAN AND FINISHES.
- D. THE CONTRACTOR SHALL ENSURE THE TOTAL SAFETY, HEALTH AND WELFARE OF ALL INDIVIDUALS WITHIN THE BUILDING PORTIONS IN WHICH DEMOLITION AND SUBSEQUENT RECONSTRUCTION IS SCHEDULED TO OCCUR. PROVIDE ALL NECESSARY MEANS OF EGRESS, BARRICADES, PROTECTIVE SCREEN SHORING, ETC. AS NECESSARY.
- E. ALL DEBRIS, EXISTING OR RESULTING FROM SCHEDULED CONSTRUCTION DURING THE COURSE OF THE WORK SHALL BE REMOVED FROM THE PROJECT AREA ON A DAILY BASIS. ALL SPACES INCLUDING STAIRS AND CORRIDORS SHALL BE MAINTAINED AND LEFT IN A BROOD CLEAN CONDITION DAILY.
- F. ALL FIXTURES AND EQUIPMENT REMOVED AS SCHEDULED, SHALL BE CONSIGNED TO THE GENERAL CONTRACTOR FOR REUSE AS SALVAGED MATERIALS OR DISPOSAL AS REQUIRED. ALL INTERIOR DOORS, LIGHT FIXTURES, BUILT-IN CABINETS AND ANY ITEMS WHICH MAY BE DESIGNATED AS SALVAGEABLE DURING THE CONSTRUCTION PERIOD, SHALL BE THE RESPONSIBILITY OF THE GENERAL CONTRACTOR TO CATALOGUE AND PROVIDE STORAGE AND PROTECTION FOR ALL SUCH MATERIALS INTENDED FOR REUSE.
- G. ALL EXISTING ELECTRICAL, PLUMBING, AND HEATING SYSTEMS SCHEDULED TO BE REMOVED SHALL BE REMOVED, CAPPED, OR SEALED AS REQUIRED FOR THE CONTRACTOR TO IMPLEMENT THE NEWLY SCHEDULED WORK. SEE ELECTRICAL, HVAC, AND PLUMBING DRAWINGS FOR ADDITIONAL INFORMATION.
- H. IN THE EVENT THAT UNCOVERED CONDITIONS ARE CONSIDERED DEFECTIVE OR OTHERWISE DISSIMILAR TO ANTICIPATED CONDITIONS, THE CONTRACTOR SHALL NOTIFY THE ARCHITECT AND ENGINEER IMMEDIATELY AND FOLLOW WITH A WRITTEN MEMORANDUM PRIOR TO PROCEEDING WITH ANY BALANCE OF SCHEDULED WORK IN ANY GIVEN AREA. THE ARCHITECT/ENGINEER SHALL PERFORM INVESTIGATION SUFFICIENT TO DETERMINE STRUCTURAL INTEGRITY OF THE GIVEN COMPONENT.
- I. ALL EXISTING WALL AREAS WHICH WERE PREVIOUSLY INTERSECTED BY OTHER WALLS, ETC. SHALL BE REPAIRED. REMOVE OLD MATERIALS TO A POINT WHERE NEW FINISH MATERIAL CAN BE EFFECTIVELY APPLIED TO A SOUND FIRM BASE. ALL OTHER CRACKED AND DAMAGED AREAS SHALL BE REPAIRED EARLY PRIOR TO THE APPLICATION OF FINAL WALL FINISHES. CONSIDER SPECIFICALLY REMOVAL OF ANY DRYWALL TO FRAME PRIOR TO PROCEEDING WITH FINAL FINISHES.
- J. ALL FLOOR AREAS UPON WHICH PREVIOUS WALLS WERE LOCATED SHALL BE REPAIRED BY THE REMOVAL OF LOOSE DEBRIS (FOLLOWING PARTITION REMOVAL) AND RESURFACED TO CAUSE THE NEW FINISH FLOOR LEVEL TO BE A SMOOTH TRANSITION BETWEEN MAINTAINED FLOOR AREAS AND REPAIRED POINTS.
- K. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL EXISTING UTILITIES AND STRUCTURES BOTH VISIBLE AND OBSCURED BY OTHER ASSEMBLIES SUCH AS PAVEMENT, BUILT STRUCTURES, ETC. AT THE COMPLETION OF DEMOLITION. GENERAL CONTRACTOR SHALL BE FINANCIALLY RESPONSIBLE FOR ANY AND ALL PREPARATION REQUIREMENTS WHICH MAY RESULT FROM DAMAGE DURING THE CONSTRUCTION OF THE WORK SCHEDULED BY THE DEVELOPMENT PLANS.
- L. ALL DEMOLITION SCHEDULED BY THESE DOCUMENTS, OR AS MAY OTHERWISE BE REQUIRED BY PREVIOUSLY UNFORESEEN CONDITIONS, SHALL BE COORDINATED BY THE GENERAL CONTRACTOR WITH ALL TRADESMAN AND WITH FINAL DRAWINGS OR MODIFICATIONS THERETO, TO DETERMINE THE FINAL EXTENT OF THE REQUIRED WORK.
- M. ALL EXISTING MEANS OF EGRESS AND ALL FIRE PROTECTION FEATURES ARE TO BE MAINTAINED DURING ALL PHASES OF WORK.
- N. ANY DEMOLITION THAT INVOLVES REFRIGERANT OR OTHER HAZARDOUS MATERIALS SHALL BE CONDUCTED IN ACCORDANCE WITH ALL AUTHORITIES HAVING JURISDICTION OVER THE REMOVAL, CONTAINMENT AND DISPOSAL OF HAZARDOUS MATERIALS. REMOVE, STORE AND DISPOSE OF REFRIGERANT ACCORDING TO 40 CFR 82 AND REGULATIONS OF ALL AUTHORITIES HAVING JURISDICTION INCLUDING ALL EPA REGULATIONS AND PROCEDURES.
- O. CONTRACTOR TO ENSURE THAT ALL HISTORIC ELEMENTS INCLUDING BUT NOT LIMITED TO FABRIC, FINISHES, MATERIAL, COMPONENTS, ETC. SHALL BE PROTECTED FROM DAMAGE DURING THE DEMOLITION AND/OR CONSTRUCTION PROCESS. ANY DAMAGE AS A RESULT OF HISTORIC ELEMENTS NOT BEING PROPERLY PROTECTED FROM DAMAGE SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND/OR TRADES RESPONSIBLE FOR THE DAMAGE. ALL DAMAGED HISTORIC ELEMENTS SHALL BE PLACED IN LIKE NEW DEFECT FREE CONDITION WITH NO COST INCURRED BY THE OWNER.
- P. ALL NEW AND EXISTING THROUGH PENETRATIONS AT FIRE RATED ASSEMBLIES (FLOOR/G/L/CEILING AND/OR WALL ASSEMBLIES) SHALL BE PROTECTED WITH APPROVED FIRE STOPPING MATERIAL.

1ST FLOOR PLAN - BLDG 'A1' DEMO 1/4" = 1'-0"

general notes: floor plans

- A. THESE DRAWINGS AS PART OF THE DOCUMENTS SHALL BE VIEWED AND CONSIDERED AS A GENERAL GUIDELINE. ALL DRAWING INFORMATION PROVIDED IS BASED UPON LIMITED FIELD DIMENSIONAL VERIFICATION AND INFORMATION PROVIDED BY OTHERS - EXISTING DRAWINGS AND PRELIMINARY DESIGN DOCUMENTS. PREPARED DRAWINGS ARE BASED UPON A REASONABLE LEVEL OF VERIFICATION OF EXISTING CONDITIONS INCLUDING FINISHES ETC. IN THE EVENT DIMENSIONAL VARIATIONS, OBTAINED CONDITIONS NOT READILY VIEWED OR ACCESSIBLE UNTIL THE DEMOLITION PROCESS HAS BEGUN, OR FINISH VARIATIONS ARE DISCOVERED - SUBSTANTIAL VARIATIONS SHALL BE REVIEWED IMMEDIATELY WITH THE OWNER'S REPRESENTATIVE AND ARCHITECT'S FIELD PERSONNEL. MINOR FRACTIONAL VARIATIONS SHALL BE RECORDED AS A MATTER OF COURSE AND DISPATCHED IN AN ORDERLY FASHION TO THE OWNER'S REPRESENTATIVE AND OTHER FIELD PERSONNEL.
- B. THE DEMOLITION DRAWINGS PROVIDE GENERAL DEMOLITION GUIDELINES AND MAY NOT BE INCLUSIVE OF ALL ITEMS, MATERIALS, SYSTEMS, ETC., REQUIRED TO BE REMOVED IN ORDER TO COMPLETE THE SCHEDULED NEW CONSTRUCTION. IN THE EVENT THAT SYSTEMS/ITEMS DISCOVERED DURING DEMOLITION REQUIRE REMOVAL FOR IMPLEMENTATION OF THE NEW WORK, IT IS THE CONTRACTOR'S RESPONSIBILITY TO COMPLETE SUCH REMOVAL, AND COORDINATE PROPOSED NEW CONSTRUCTION WITH SAID REMOVAL.
- C. GENERAL SCOPE OF DEMOLITION WORK SHALL INCLUDE REMOVAL OF ALL EXISTING CONSTRUCTION, FINISHES, MECHANICAL/ELECTRICAL/PLUMBING SYSTEMS, ETC., AS REQUIRED FOR IMPLEMENTATION OF NEW PLAN AND FINISHES.
- D. THE CONTRACTOR SHALL ENSURE THE TOTAL SAFETY, HEALTH AND WELFARE OF ALL INDIVIDUALS WITHIN THE BUILDING THROUGHOUT THE DEMOLITION AND SUBSEQUENT RECONSTRUCTION IS SCHEDULED TO OCCUR. PROVIDE ALL NECESSARY MEANS OF EGRESS, BARRICADES, PROTECTIVE SCREEN SHORING, ETC. AS NECESSARY.
- E. ALL DEBRIS, EXISTING OR RESULTING FROM SCHEDULED CONSTRUCTION DURING THE COURSE OF THE WORK, SHALL BE REMOVED FROM THE PROJECT AREA ON A DAILY BASIS. ALL SPACES INCLUDING STAIRS AND CORRIDORS SHALL BE MAINTAINED AND LEFT IN A BRUSH CLEAN CONDITION DAILY.
- F. ALL FIXTURES AND EQUIPMENT SCHEDULED TO BE REMOVED SHALL BE COMBINED TO THE GENERAL CONTRACTOR FOR REUSE AS SALVAGED MATERIALS OR DISPOSAL AS REQUIRED. ALL INTERIOR DOORS, LIGHT FIXTURES, BUILT-IN CABINETRY AND ANY ITEMS WHICH MAY BE DESIGNATED AS SALVAGEABLE DURING THE CONSTRUCTION PERIOD, SHALL BE THE RESPONSIBILITY OF THE GENERAL CONTRACTOR TO CATALOGUE AND PROVIDE STORAGE AND PROTECTION FOR ALL SUCH MATERIALS INTENDED FOR REUSE.
- G. REMOVAL OF EXISTING MECHANICAL AND HEATING SYSTEMS SCHEDULED TO BE REMOVED SHALL BE REMOVED, CAPPED, OR SEALED AS REQUIRED FOR THE CONTRACTOR TO IMPLEMENT THE NEWLY SCHEDULED WORK. SEE ELECTRICAL, HVAC, AND PLUMBING DRAWINGS FOR ADDITIONAL INFORMATION.
- H. IN THE EVENT THAT UNCOVERED CONDITIONS ARE CONSIDERED DEFECTIVE OR OTHERWISE DISSIMILAR TO ANTICIPATED CONDITIONS, THE CONTRACTOR SHALL NOTIFY THE ARCHITECT AND ENGINEER IMMEDIATELY AND FOLLOW WITH A WRITTEN MEMORANDUM REQUESTING A BALANCE OF SCHEDULED WORK. THE CONTRACTOR SHALL IN ANY GIVEN AREA THE ARCHITECT/ENGINEER SHALL PERFORM INVESTIGATION SUFFICIENT TO DETERMINE STRUCTURAL INTEGRITY OF THE GIVEN COMPONENT. ALL EXISTING WALL AREAS WHICH WERE PREVIOUSLY INTERSECTED BY OTHER WALLS, ETC. SHALL BE REPAIRED. REMOVE OLD MATERIALS TO A POINT WHERE NEW FINISH MATERIAL CAN BE EFFECTIVELY APPLIED TO A SOUND FIRM BASE. ALL OTHER CRACKED AND DAMAGED WALL AREAS SHALL BE REPAIRED SIMILARLY PRIOR TO THE APPLICATION OF FINAL FINISHES. CONSIDER SPECIFICALLY REMOVAL OF ANY DRYWALL TO FRAME PRIOR TO PROCEEDING WITH FINAL FINISHES.
- I. ALL FLOOR AREAS UPON WHICH PREVIOUS WALLS WERE LOCATED SHALL BE REPAIRED BY THE REMOVAL OF LOOSE DEBRIS (FOLLOWING PARTITION REMOVAL) AND RESURFACED TO CAUSE THE NEW FINISH FLOOR LEVEL TO BE A SMOOTH TRANSITION BETWEEN MAINTAINED FLOOR AREAS AND REPAIRED POINTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL EXISTING UTILITIES AND STRUCTURES BOTH VISIBLE AND OBSERVED BY OTHER ASSEMBLIES SUCH AS PAVEMENT, BUILT STRUCTURES, ETC., AT THE COMPLETION OF DEMOLITION. GENERAL CONTRACTOR SHALL BE FINANCIALLY RESPONSIBLE FOR ANY AND ALL PREPARATION REQUIREMENTS WHICH MAY RESULT FROM DAMAGE DURING THE CONSTRUCTION OF THE WORK SCHEDULED BY THE DEVELOPMENT PLANS.
- J. ALL DEMOLITION SCHEDULED BY THESE DOCUMENTS OR AS MAY OTHERWISE BE REQUIRED BY PREVIOUS CONDITIONS, SHALL BE COORDINATED BY THE GENERAL CONTRACTOR WITH ALL TRADESMAN AND WITH FINAL DRAWINGS OR MODIFICATIONS THERETO, TO DETERMINE THE FINAL EXTENT OF THE REQUIRED WORK.
- K. ALL EXISTING MEANS OF EGRESS AND ALL FIRE PROTECTION FEATURES ARE TO BE MAINTAINED DURING ALL PHASES OF WORK.
- L. ANY DEMOLITION THAT INVOLVES REFRIGERANT OR OTHER HAZARDOUS MATERIALS SHALL BE CONDUCTED IN ACCORDANCE WITH ALL AUTHORITIES HAVING JURISDICTION OVER THE REMOVAL, CONTAINMENT AND DISPOSAL OF HAZARDOUS MATERIALS. REMOVE, STORE AND DISPOSE OF REFRIGERANT ACCORDING TO 40 CFR 82 AND REGULATIONS OF ALL AUTHORITIES HAVING JURISDICTION INCLUDING ALL EPA REGULATIONS AND PROCEDURES. CONTRACTOR TO ENSURE THAT ALL HISTORIC ELEMENTS INCLUDING BUT NOT LIMITED TO FABRIC, FINISHES, MATERIAL, COMPONENTS, ETC. SHALL BE PROTECTED FROM DAMAGE DURING THE DEMOLITION AND/OR CONSTRUCTION PROCESS. ANY DAMAGE AS A RESULT OF HISTORIC ELEMENTS NOT BEING PROPERLY PROTECTED FROM DAMAGE SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND/OR TRADES RESPONSIBLE FOR THE DAMAGE. ALL DAMAGED HISTORIC ELEMENTS SHALL BE PLACED IN LIKE NEW DEFECT FREE CONDITION WITH NO COST INCURRED BY THE OWNER.
- M. ALL NEW AND EXISTING THROUGH PENETRATIONS AT FIRE RATED ASSEMBLIES (FLOOR/CEILING AND/OR WALL ASSEMBLIES) SHALL BE PROTECTED WITH APPROVED FIRESTOPPING MATERIAL.
- N. THESE DRAWINGS AS PART OF THE CONTRACT DOCUMENTS ARE DIAGRAMMATIC AND ARE NOT INTENDED TO DEFINE EXACT QUANTITIES. LOCATIONS OR COORDINATE REQUIREMENTS THE DRAWINGS SHALL NOT BE SCALED. 1. ALL BIDDERS SHALL VISIT THE SITE AND BECOME FAMILIAR WITH THE EXISTING CONDITIONS AND REQUIREMENTS OF THE PROJECT AND SHALL NOTIFY THE ARCHITECT OF ANY ERRORS AND OMISSIONS SUBSEQUENTLY DISCOVERED IN THE CONTRACT DOCUMENTS.
 2. THE CONTRACT DOCUMENTS ARE COMPRISED OF THE DRAWINGS AND THE PROJECT MANUAL IN THEIR ENTIRETY. THE INFORMATION IN THESE DOCUMENTS IS DEPENDENT UPON AND COMPLEMENTARY OF EACH OTHER.
 3. SEPARATION OF THE CONTRACT DOCUMENTS SHALL NOT BE PERMITTED. IF THE CONTRACTOR CHOOSES TO SEPARATE THE DOCUMENTS, THEY DO SO AT THEIR OWN RISK AND EXPENSE.
 4. ADDITIONALLY, SEE GENERAL INFORMATION ON "A0" SHEETS.
 5. THE CLIENT ACKNOWLEDGES THE CONSULTANTS (ARCHITECT) DRAWINGS AND SPECIFICATION INCLUDING ALL DOCUMENTS ON ELECTRONIC MEDIA AS INSTRUMENTS OF THE CONSULTANTS (ARCHITECT) PROFESSIONAL SERVICE. THE CLIENT SHALL NOT REUSE OR MAKE OR PERMIT TO BE MADE ANY MODIFICATION TO THE DRAWINGS AND SPECIFICATIONS WITHOUT THE PRIOR WRITTEN AUTHORIZATION OF THE CONSULTANT (ARCHITECT). THE CLIENT AGREES TO WAIVE ANY CLAIM AGAINST THE CONSULTANT (ARCHITECT) ARISING FROM ANY UNAUTHORIZED TRANSMISSION OR MODIFICATION OF THE DRAWINGS AND SPECIFICATIONS.
 6. ARCHITECT CANNOT WARRANT THE ACCURACY OF DATA CONTAINED HEREIN. ANY USE OR REUSE OF ORIGINAL OR ALTERED CAD/DWG DESIGN MATERIALS BY THE USER OR OTHER PARTIES WITHOUT THE REVIEW AND WRITTEN APPROVAL OF THE ARCHITECT SHALL BE AT THE SOLE RISK OF THE USER. FURTHERMORE, USER AGREES TO DEFEND, INDEMNIFY, AND HOLD ARCHITECT HARMLESS FROM ALL CLAIMS, INJURIES, DAMAGES, LOSSES, EXPENSES, AND ATTORNEY'S FEES ARISING OUT OF THE MODIFICATION OR REUSE OF THESE MATERIALS.
 7. THESE DRAWINGS AS PART OF THE CONTRACT DOCUMENTS ARE DIAGRAMMATIC AND ARE NOT INTENDED TO DEFINE EXACT QUANTITIES. LOCATIONS OR COORDINATE REQUIREMENTS THE DRAWINGS SHALL NOT BE SCALED. EXACT STATE AND LOCAL CODE REQUIREMENTS AND OTHER APPLICABLE CODE REQUIREMENTS SHALL BE VERIFIED BY AND ARE THE SOLE RESPONSIBILITY OF THE CONTRACTOR. ANY INFORMATION WHICH DIRECTLY CONFLICTS WITH ANY OF THESE CODES OR ANY DISCREPANCIES FOUND IN THE CONTRACT DOCUMENTS SHALL BE BROUGHT TO THE ATTENTION OF THE PROJECT ARCHITECT.

BERARDI+
ARCHITECTURE | INTERIOR DESIGN | ENGINEERING
1398 GOODALE BOULEVARD, COLUMBUS, OHIO 43212
P 614.221.1110 berardipartners.com

2ND FLOOR PLAN - BLDG 'A2' DEMO 1/4" = 1'-0"

ASSOCIATED BUILDING NUMBERS = 36

1ST FLOOR PLAN - BLDG 'A2' DEMO 1/4" = 1'-0"

- general notes: floor plans
- THESE DRAWINGS AS PART OF THE DOCUMENTS SHALL BE VIEWED AND CONSIDERED AS A GENERAL GUIDELINE. ALL DRAWING INFORMATION PROVIDED IS BASED UPON LIMITED FIELD DIMENSIONAL VERIFICATION AND INFORMATION PROVIDED BY OTHERS - EXISTING DRAWINGS AND PRELIMINARY DESIGN DOCUMENTS. PREPARED DRAWINGS ARE BASED UPON A REASONABLE LEVEL OF VERIFICATION OF EXISTING CONDITIONS INCLUDING FINISHES ETC. IN THE EVENT DIMENSIONAL VARIATIONS, OBTAINED CONDITIONS NOT READILY VIEWED OR ACCESSIBLE UNTIL THE DEMOLITION PROCESS HAS BEGUN, OR FINISH VARIATIONS ARE DISCOVERED - SUBSTANTIAL VARIATIONS SHALL BE REVIEWED IMMEDIATELY WITH THE OWNER'S REPRESENTATIVE AND ARCHITECT'S FIELD PERSONNEL. MINOR FRACTIONAL VARIATIONS BEING OF COURSE AND DISPATCHED IN AN ORDERLY FASHION TO THE OWNER'S REPRESENTATIVE AND OTHER FIELD PERSONNEL.
 - THE DEMOLITION DRAWINGS PROVIDE GENERAL DEMOLITION GUIDELINES AND MAY NOT BE INCLUSIVE OF ALL ITEMS, MATERIALS, SYSTEMS, ETC., REQUIRED TO BE REMOVED IN ORDER TO COMPLETE THE SCHEDULED NEW CONSTRUCTION. IN THE EVENT THAT SYSTEMS/ITEMS DISCOVERED DURING DEMOLITION REQUIRE REMOVAL FOR IMPLEMENTATION OF THE NEW WORK, IT IS THE CONTRACTOR'S RESPONSIBILITY TO COMPLETE SUCH REMOVAL, AND COORDINATE PROPOSED NEW CONSTRUCTION WITH SAID REMOVAL.
 - GENERAL SCOPE OF DEMOLITION WORK SHALL INCLUDE REMOVAL OF ALL EXISTING CONSTRUCTION, FINISHES, MECHANICAL/ELECTRICAL/PLUMBING SYSTEMS, ETC., AS REQUIRED FOR IMPLEMENTATION OF NEW PLAN AND FINISHES.
 - THE CONTRACTOR SHALL ENSURE THE TOTAL SAFETY, HEALTH AND WELFARE OF ALL INDIVIDUALS WITHIN THE BUILDING OR ON THE PROJECT AND SUBSEQUENT RECONSTRUCTION IS SCHEDULED TO OCCUR, PROVIDE ALL NECESSARY MEANS OF EGRESS, BARRICADES, PROTECTIVE SCREEN SHORING, ETC. AS NECESSARY.
 - ALL DEBRIS, EXISTING OR RESULTING FROM SCHEDULED CONSTRUCTION DURING THE COURSE OF THE WORK, SHALL BE REMOVED FROM THE PROJECT AREA ON A DAILY BASIS. ALL SPACES INCLUDING STAIRS AND CORRIDORS SHALL BE MAINTAINED AND LEFT IN A CLEAN CONDITION DAILY.
 - ALL FIXTURES AND EQUIPMENT REMOVED AS SCHEDULED SHALL BE CONSIGNED TO THE GENERAL CONTRACTOR FOR REUSE AS SALVAGED MATERIALS OR DISPOSAL AS REQUIRED. ALL INTERIOR DOORS, LIGHT FIXTURES, BUILT-IN CABINETRY AND ANY ITEMS WHICH MAY BE DESIGNATED AS SALVAGEABLE DURING THE CONSTRUCTION PERIOD, SHALL BE THE RESPONSIBILITY OF THE GENERAL CONTRACTOR TO CATALOGUE AND PROVIDE STORAGE AND PROTECTION FOR ALL SUCH MATERIALS INTENDED FOR REUSE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL EXISTING ELECTRICAL, PLUMBING, AND HEATING SYSTEMS SCHEDULED TO BE REMOVED SHALL BE REMOVED, GAPPED, OR SEALED AS REQUIRED FOR THE CONTRACTOR TO IMPLEMENT THE NEWLY SCHEDULED WORK. SEE ELECTRICAL, HVAC, AND PLUMBING DRAWINGS FOR ADDITIONAL INFORMATION.
 - IN THE EVENT THAT UNCOVERED CONDITIONS ARE CONSIDERED DEFECTIVE OR OTHERWISE DISSIMILAR TO ANTICIPATED CONDITIONS, THE CONTRACTOR SHALL NOTIFY THE ARCHITECT AND ENGINEER IMMEDIATELY AND FOLLOW WITH A WRITTEN MEMORANDUM PROCEEDING WITH ANY BALANCE OF SCHEDULED WORK IN ANY GIVEN AREA. THE ARCHITECT/ENGINEER SHALL PERFORM INVESTIGATION SUFFICIENT TO DETERMINE STRUCTURAL INTEGRITY OF THE GIVEN COMPONENT. ALL EXISTING WALL AREAS WHICH WERE PREVIOUSLY INTERSECTED BY OTHER WALLS, ETC. SHALL BE REPAIRED. REMOVE OLD MATERIALS TO A POINT WHERE NEW FINISH MATERIAL CAN BE EFFECTIVELY APPLIED TO A SOUND FIRM BASE. ALL OTHER CRACKED AND DAMAGED WALL AREAS SHALL BE REPAIRED SIMILARLY PRIOR TO THE APPLICATION OF FINAL WALL FINISHES. CONSIDER SPECIFICALLY REMOVAL OF ANY DRYWALL TO FRAME PRIOR TO PROCEEDING WITH FINAL FINISHES.
 - ALL FLOOR AREAS UPON WHICH PREVIOUS WALLS WERE LOCATED SHALL BE REPAIRED BY THE REMOVAL OF LOOSE DEBRIS (FOLLOWING PARTITION REMOVAL) AND RESURFACED TO CAUSE THE NEW FINISH FLOOR LEVEL TO BE A SMOOTH TRANSITION BETWEEN MAINTAINED FLOOR AREAS AND REPAIRED POINTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL EXISTING UTILITIES AND STRUCTURES BOTH VISIBLE AND OBSERVED BY OTHER ASSEMBLIES SUCH AS PAVEMENT, BUILT STRUCTURES, ETC., AT THE COMPLETION OF DEMOLITION. GENERAL CONTRACTOR SHALL BE FINANCIALLY RESPONSIBLE FOR ANY AND ALL PREPARATION REQUIREMENTS WHICH MAY RESULT FROM DAMAGE DURING THE CONSTRUCTION OF THE WORK SCHEDULED BY THE DEVELOPMENT PLANS.
 - ALL DEMOLITION SCHEDULED BY THESE DOCUMENTS, OR AS MAY OTHERWISE BE REQUIRED BY PREVIOUS UNDISCOVERED CONDITIONS, SHALL BE COORDINATED BY THE GENERAL CONTRACTOR WITH ALL TRADESMAN AND WITH FINAL DRAWINGS OR MODIFICATIONS THERETO, TO DETERMINE THE FINAL EXTENT OF THE REQUIRED WORK.
 - ALL EXISTING MEANS OF EGRESS AND ALL FIRE PROTECTION FEATURES ARE TO BE MAINTAINED DURING ALL PHASES OF WORK.
 - ANY DEMOLITION THAT INVOLVES REFRIGERANT OR OTHER HAZARDOUS MATERIALS SHALL BE CONDUCTED IN ACCORDANCE WITH ALL AUTHORITIES HAVING JURISDICTION OVER THE REMOVAL, CONTAINMENT AND DISPOSAL OF HAZARDOUS MATERIALS. REMOVE, STORE AND DISPOSE OF REFRIGERANT ACCORDING TO 40 CFR 82 AND REGULATIONS OF ALL AUTHORITIES HAVING JURISDICTION INCLUDING ALL EPA REGULATIONS AND PROCEDURES.
 - CONTRACTOR TO ENSURE THAT ALL HISTORIC ELEMENTS INCLUDING BUT NOT LIMITED TO FABRIC, FINISHES, MATERIAL COMPONENTS, ETC. SHALL BE PROTECTED FROM DAMAGE DURING THE DEMOLITION AND/OR CONSTRUCTION PROCESS. ANY DAMAGE AS A RESULT OF HISTORIC ELEMENTS NOT BEING PROPERLY PROTECTED FROM DAMAGE SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND/OR TRADES RESPONSIBLE FOR THE DAMAGE. ALL DAMAGED HISTORIC ELEMENTS SHALL BE PLACED IN LIKE NEW DEFECT FREE CONDITION WITH NO COST INCURRED BY THE OWNER.
 - ALL NEW AND EXISTING THROUGH PENETRATIONS AT FIRE RATED ASSEMBLIES (FLOOR/CEILING AND/OR WALL ASSEMBLIES) SHALL BE PROTECTED WITH APPROVED FIRESTOPPING MATERIAL.

CONSIDER SPECIFICALLY REMOVAL OF ANY DRYWALL TO FRAME PRIOR TO PROCEEDING WITH FINAL FINISHES.
- I. ALL FLOOR AREAS UPON WHICH PREVIOUS WALLS WERE LOCATED SHALL BE REPAIRED BY THE REMOVAL OF LOOSE DEBRIS (FOLLOWING PARTITION REMOVAL) AND RESURFACED TO CAUSE THE NEW FINISH FLOOR LEVEL TO BE A SMOOTH TRANSITION BETWEEN MAINTAINED FLOOR AREAS AND REPAIRED PORTIONS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL EXISTING UTILITIES AND STRUCTURES BOTH VISIBLE AND OBSERVED BY OTHER ASSEMBLIES SUCH AS PAVEMENT, BUILT STRUCTURES, ETC., AT THE COMPLETION OF DEMOLITION. GENERAL CONTRACTOR SHALL BE FINANCIALLY RESPONSIBLE FOR ANY AND ALL PREPARATION REQUIREMENTS WHICH MAY RESULT FROM DAMAGE DURING THE CONSTRUCTION OF THE WORK SCHEDULED BY THE DEVELOPMENT PLANS.
- J. ALL DEMOLITION SCHEDULED BY THESE DOCUMENTS OR AS MAY OTHERWISE BE REQUIRED BY PREVIOUS UNOBTAINED CONDITIONS, SHALL BE COORDINATED BY THE GENERAL CONTRACTOR WITH ALL TRADESMAN AND WITH FINAL DRAWINGS OR MODIFICATIONS THERE TO, TO DETERMINE THE FINAL EXTENT OF THE REQUIRED WORK.
- K. ALL EXISTING MEANS OF EGRESS AND ALL FIRE PROTECTION FEATURES ARE TO BE MAINTAINED DURING ALL PHASES OF WORK.
- L. ANY DEMOLITION THAT INVOLVES REFRIGERANT OR OTHER HAZARDOUS MATERIALS SHALL BE CONDUCTED IN ACCORDANCE WITH ALL AUTHORITIES HAVING JURISDICTION OVER THE REMOVAL, CONTAINMENT AND DISPOSAL OF HAZARDOUS MATERIALS. REMOVE, STORE AND DISPOSE OF REFRIGERANT ACCORDING TO 40 CFR 82 AND REGULATIONS OF ALL AUTHORITIES HAVING JURISDICTION INCLUDING ALL EPA REGULATIONS AND PROCEDURES. CONTRACTOR TO ENSURE THAT ALL HISTORIC ELEMENTS INCLUDING BUT NOT LIMITED TO FABRIC, FINISHES, MATERIAL, COMPONENTS, ETC. SHALL BE PROTECTED FROM DAMAGE DURING THE DEMOLITION AND/OR CONSTRUCTION PROCESS. ANY DAMAGE AS A RESULT OF HISTORIC ELEMENTS NOT BEING PROPERLY PROTECTED FROM DAMAGE SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND/OR TRADES RESPONSIBLE FOR THE DAMAGE. ALL DAMAGED HISTORIC ELEMENTS SHALL BE PLACED IN LIKE NEW DEFECT FREE CONDITION WITH NO COST INCURRED BY THE OWNER.
- M. ALL NEW AND EXISTING THROUGH PENETRATIONS AT FIRE RATED ASSEMBLIES (FLOOR/CEILING AND/OR WALL ASSEMBLIES) SHALL BE PROTECTED WITH APPROVED FIRESTOPPING MATERIAL.

**DEMOLITION
PLANS -
BUILDING 'D'
D101.d**

2ND FLOOR PLAN - BLDG 'E' DEMO 1/4" = 1'-0"

1ST FLOOR PLAN - BLDG 'E' DEMO 1/4" = 1'-0"

general notes: floor plans

- A. THESE DRAWINGS AS PART OF THE DOCUMENTS SHALL BE VIEWED AND CONSIDERED AS A GENERAL GUIDELINE. ALL DRAWING INFORMATION PROVIDED IS BASED UPON LIMITED FIELD DIMENSIONAL VERIFICATION AND INFORMATION PROVIDED BY OTHERS - EXISTING DRAWINGS AND PRELIMINARY DESIGN DOCUMENTS. PREPARED DRAWINGS ARE BASED UPON A REASONABLE LEVEL OF VERIFICATION OF EXISTING CONDITIONS INCLUDING FINISHES ETC. IN THE EVENT DIMENSIONAL VARIATIONS, OBTAINED CONDITIONS NOT READILY VIEWED OR ACCESSIBLE UNTIL THE DEMOLITION PROCESS HAS BEGUN, OR FINISH VARIATIONS ARE DISCOVERED - SUBSTANTIAL VARIATIONS SHALL BE REVIEWED IMMEDIATELY WITH THE OWNER'S REPRESENTATIVE AND ARCHITECT'S FIELD PERSONNEL. MINOR FRACTIONAL VARIATIONS SHALL BE RECORDED AS A MATTER OF COURSE AND DISPATCHED IN AN ORDERLY FASHION TO THE OWNER'S REPRESENTATIVE AND OTHER FIELD PERSONNEL.
- B. THE DEMOLITION DRAWINGS PROVIDE GENERAL DEMOLITION GUIDELINES AND MAY NOT BE INCLUSIVE OF ALL ITEMS, MATERIALS, SYSTEMS, ETC., REQUIRED TO BE REMOVED IN ORDER TO COMPLETE THE SCHEDULED NEW CONSTRUCTION. IN THE EVENT THAT SYSTEMS/ITEMS DISCOVERED DURING DEMOLITION REQUIRE REMOVAL FOR IMPLEMENTATION OF THE NEW WORK, IT IS THE CONTRACTOR'S RESPONSIBILITY TO COMPLETE SUCH REMOVAL, AND COORDINATE PROPOSED NEW CONSTRUCTION WITH SAID REMOVAL.
- C. GENERAL SCOPE OF DEMOLITION WORK SHALL INCLUDE REMOVAL OF ALL EXISTING CONSTRUCTION, FINISHES, MECHANICAL/ELECTRICAL/PLUMBING SYSTEMS, ETC., AS REQUIRED FOR IMPLEMENTATION OF NEW PLAN AND FINISHES.
- D. THE CONTRACTOR SHALL ENSURE THE TOTAL SAFETY, HEALTH AND WELFARE OF ALL INDIVIDUALS WITHIN THE BUILDING THROUGHOUT THE DEMOLITION AND SUBSEQUENT RECONSTRUCTION IS SCHEDULED TO OCCUR. PROVIDE ALL NECESSARY MEANS OF EGRESS, BARRICADES, PROTECTIVE SCREEN SHORING, ETC. AS NECESSARY.
- E. ALL DEBRIS, EXISTING OR RESULTING FROM SCHEDULED CONSTRUCTION DURING THE COURSE OF THE WORK, SHALL BE REMOVED FROM THE PROJECT AREA ON A DAILY BASIS. ALL SPACES INCLUDING STAIRS AND CORRIDORS SHALL BE MAINTAINED AND LEFT IN A PROPERLY CLEAN CONDITION.
- F. ALL FIXTURES AND EQUIPMENT REMOVED AS SCHEDULED, SHALL BE CONSIGNED TO THE GENERAL CONTRACTOR FOR REUSE AS SALVAGED MATERIALS OR DISPOSAL AS REQUIRED. ALL INTERIOR DOORS, LIGHT FIXTURES, BUILT-IN CABINETRY AND ANY ITEMS WHICH MAY BE DESIGNATED AS SALVAGEABLE DURING THE CONSTRUCTION PERIOD, SHALL BE THE RESPONSIBILITY OF THE GENERAL CONTRACTOR TO CATALOGUE AND PROVIDE STORAGE AND PROTECTION FOR ALL SUCH MATERIALS INTENDED FOR REUSE.
- G. ALL EXISTING ELECTRICAL, PLUMBING, AND HEATING SYSTEMS SCHEDULED TO BE REMOVED SHALL BE REMOVED, GAPPED, OR SEALED AS REQUIRED FOR THE CONTRACTOR TO IMPLEMENT THE NEWLY SCHEDULED WORK. SEE ELECTRICAL, HVAC, AND PLUMBING DRAWINGS FOR ADDITIONAL INFORMATION.
- H. IN THE EVENT THAT UNCOVERED CONDITIONS ARE CONSIDERED DEFECTIVE OR OTHERWISE DISSIMILAR TO ANTICIPATED CONDITIONS, THE CONTRACTOR SHALL NOTIFY THE ARCHITECT AND ENGINEER IMMEDIATELY AND FOLLOW WITH A WRITTEN MEMORANDUM PRIOR TO PROCEEDING WITH ANY SCHEDULED WORK. IN ANY GIVEN AREA THE ARCHITECT/ENGINEER SHALL PERFORM INVESTIGATION SUFFICIENT TO DETERMINE STRUCTURAL INTEGRITY OF THE GIVEN COMPONENT. ALL EXISTING WALL AREAS WHICH WERE PREVIOUSLY INTERSECTED BY OTHER WALLS, ETC. SHALL BE REPAIRED. REMOVE OLD MATERIALS TO A POINT WHERE NEW FINISH MATERIAL CAN BE EFFECTIVELY APPLIED TO A SOUND FIRM BASE. ALL OTHER CRACKED AND DAMAGED WALL AREAS SHALL BE REPAIRED SIMILARLY PRIOR TO THE ABOVE ALL FINISHES. CONSIDER SPECIFICALLY REMOVAL OF ANY DRYWALL TO FRAME PRIOR TO PROCEEDING WITH FINAL FINISHES.
- I. ALL FLOOR AREAS UPON WHICH PREVIOUS WALLS WERE LOCATED SHALL BE REPAIRED BY THE REMOVAL OF LOOSE DEBRIS (FOLLOWING PARTITION REMOVAL) AND RESURFACED TO CAUSE THE NEW FINISH FLOOR LEVEL TO BE A SMOOTH TRANSITION BETWEEN MAINTAINED FLOOR AREAS AND REPAIRED POINTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL EXISTING UTILITIES AND STRUCTURES BOTH VISIBLE AND OBSERVED BY OTHER ASSEMBLIES SUCH AS PAVEMENT, BUILT STRUCTURES, ETC., AT THE COMPLETION OF DEMOLITION. GENERAL CONTRACTOR SHALL BE FINANCIALLY RESPONSIBLE FOR ANY AND ALL PREPARATION REQUIREMENTS WHICH MAY RESULT FROM DAMAGE DURING THE CONSTRUCTION OF THE WORK SCHEDULED BY THE DEVELOPMENT PLANS.
- J. ALL DEMOLITION SCHEDULED BY THESE DOCUMENTS, OR AS MAY OTHERWISE BE REQUIRED BY PREVIOUS UNOBTAINED CONDITIONS, SHALL BE COORDINATED BY THE GENERAL CONTRACTOR WITH ALL TRADESMAN AND WITH FINAL DRAWINGS OR MODIFICATIONS THERETO, TO DETERMINE THE FINAL EXTENT OF THE REQUIRED WORK.
- K. ALL EXISTING MEANS OF EGRESS AND ALL FIRE PROTECTION FEATURES ARE TO BE MAINTAINED DURING ALL PHASES OF WORK.
- L. ANY DEMOLITION THAT INVOLVES REFRIGERANT OR OTHER HAZARDOUS MATERIALS SHALL BE CONDUCTED IN ACCORDANCE WITH ALL AUTHORITIES HAVING JURISDICTION OVER THE REMOVAL, CONTAINMENT AND DISPOSAL OF HAZARDOUS MATERIALS. REMOVE, STORE AND DISPOSE OF REFRIGERANT ACCORDING TO 40 CFR 82 AND REGULATIONS OF ALL AUTHORITIES HAVING JURISDICTION INCLUDING ALL EPA REGULATIONS AND PROCEDURES.
- M. CONTRACTOR TO ENSURE THAT ALL HISTORIC ELEMENTS INCLUDING BUT NOT LIMITED TO FABRIC, FINISHES, MATERIAL, COMPONENTS, ETC. SHALL BE PROTECTED FROM DAMAGE DURING THE DEMOLITION AND/OR CONSTRUCTION PROCESS. ANY DAMAGE AS A RESULT OF HISTORIC ELEMENTS NOT BEING PROPERLY PROTECTED FROM DAMAGE SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND/OR TRADES RESPONSIBLE FOR THE DAMAGE. ALL DAMAGED HISTORIC ELEMENTS SHALL BE PLACED IN LIKE NEW DEFECT FREE CONDITION WITH NO COST INCURRED BY THE OWNER.
- N. ALL NEW AND EXISTING THROUGH PENETRATIONS AT FIRE RATED ASSEMBLIES (FLOOR/CEILING AND/OR WALL ASSEMBLIES) SHALL BE PROTECTED WITH APPROVED FIRESTOPPING MATERIAL.

- A. THESE DRAWINGS AS PART OF THE DOCUMENTS SHALL BE VIEWED AND CONSIDERED AS A GENERAL GUIDELINE. ALL DRAWING INFORMATION PROVIDED IS BASED UPON LIMITED FIELD DIMENSIONAL VERIFICATION AND INFORMATION PROVIDED BY OTHERS - EXISTING DRAWINGS AND PRELIMINARY DESIGN DOCUMENTS. PREPARED DRAWINGS ARE BASED UPON A REASONABLE LEVEL OF VERIFICATION OF EXISTING CONDITIONS INCLUDING FINISHES ETC. IN THE EVENT DIMENSIONAL VARIATIONS, OBTAINED CONDITIONS NOT READILY VIEWED OR ACCESSIBLE UNTIL THE DEMOLITION PROCESS HAS BEGUN, OR FINISH VARIATIONS ARE DISCOVERED - SUBSTANTIAL VARIATIONS SHALL BE REVIEWED IMMEDIATELY WITH THE OWNER'S REPRESENTATIVE AND ARCHITECT'S FIELD PERSONNEL. MINOR FRACTIONAL VARIATIONS WILL BE CORRECTED AS NECESSARY AND DISPATCHED IN AN ORDERLY FASHION TO THE OWNER'S REPRESENTATIVE AND OTHER FIELD PERSONNEL.
- B. THE DEMOLITION DRAWINGS PROVIDE GENERAL DEMOLITION GUIDELINES AND MAY NOT BE INCLUSIVE OF ALL ITEMS, MATERIALS, SYSTEMS, ETC. REQUIRED TO BE REMOVED IN ORDER TO COMPLETE THE SCHEDULED NEW CONSTRUCTION. IN THE EVENT THAT SYSTEMS/ITEMS DISCOVERED DURING DEMOLITION REQUIRE REMOVAL FOR IMPLEMENTATION OF THE NEW WORK, IT IS THE CONTRACTOR'S RESPONSIBILITY TO COMPLETE SUCH REMOVAL, AND COORDINATE PROPOSED NEW CONSTRUCTION WITH SAID REMOVAL.
- C. GENERAL SCOPE OF DEMOLITION WORK SHALL INCLUDE REMOVAL OF ALL EXISTING CONSTRUCTION, FINISHES, MECHANICAL/ELECTRICAL/PLUMBING SYSTEMS, ETC. AS REQUIRED FOR IMPLEMENTATION OF NEW PLAN AND FINISHES.
- D. THE CONTRACTOR SHALL ENSURE THE TOTAL SAFETY, HEALTH AND WELFARE OF ALL INDIVIDUALS WITHIN THE BUILDING THROUGHOUT THE DEMOLITION AND SUBSEQUENT RECONSTRUCTION IS SCHEDULED TO OCCUR. PROVIDE ALL NECESSARY MEANS OF EGRESS, BARRICADES, PROTECTIVE SCREEN SHORING, ETC. AS NECESSARY.
- E. ALL DEBRIS, EXISTING OR RESULTING FROM SCHEDULED CONSTRUCTION DURING THE COURSE OF THE WORK, SHALL BE REMOVED FROM THE PROJECT AREA ON A DAILY BASIS. ALL SPACES INCLUDING STAIRS AND CORRIDORS SHALL BE MAINTAINED AND LEFT IN A DRY AND CLEAN CONDITION.
- F. ALL FIXTURES AND EQUIPMENT REMOVED AS SCHEDULED, SHALL BE CONSIGNED TO THE GENERAL CONTRACTOR FOR REUSE AS SALVAGED MATERIALS OR DISPOSAL AS REQUIRED. ALL INTERIOR DOORS, LIGHT FIXTURES, BUILT-IN CABINETRY AND ANY ITEMS WHICH MAY BE DESIGNATED AS SALVAGEABLE DURING THE CONSTRUCTION PERIOD, SHALL BE THE RESPONSIBILITY OF THE GENERAL CONTRACTOR TO CATALOGUE AND PROVIDE STORAGE AND PROTECTION FOR ALL SUCH MATERIALS INTENDED FOR REUSE.
- G. ALL EXISTING ELECTRICAL, PLUMBING, AND HEATING SYSTEMS SCHEDULED TO BE REMOVED SHALL BE REMOVED, GAPPED, OR SEALED AS REQUIRED FOR THE CONTRACTOR TO IMPLEMENT THE NEWLY SCHEDULED WORK. SEE ELECTRICAL, HVAC, AND PLUMBING DRAWINGS FOR ADDITIONAL INFORMATION.
- H. IN THE EVENT THAT UNCOVERED CONDITIONS ARE CONSIDERED DEFECTIVE OR OTHERWISE DISSIMILAR TO ANTICIPATED CONDITIONS, THE CONTRACTOR SHALL NOTIFY THE ARCHITECT AND ENGINEER IMMEDIATELY AND FOLLOW WITH A WRITTEN MEMORANDUM WITHIN THE BUILDING FOR THE RANGE OF SCHEDULED WORK. IN ANY GIVEN AREA, THE ARCHITECT/ENGINEER SHALL PERFORM INVESTIGATION SUFFICIENT TO DETERMINE STRUCTURAL INTEGRITY OF THE GIVEN COMPONENT.
- I. ALL EXISTING WALL AREAS WHICH WERE PREVIOUSLY INTERSECTED BY OTHER WALLS, ETC. SHALL BE REPAIRED. REMOVE OLD MATERIALS TO A POINT WHERE NEW FINISH MATERIAL CAN BE EFFECTIVELY APPLIED TO A SOUND FIRM BASE. ALL OTHER CRACKED AND DAMAGED WALL AREAS SHALL BE REPAIRED SIMILARLY PRIOR TO THE APPLICATION OF FINAL WALL FINISHES. CONSIDER SPECIFICALLY REMOVAL OF ANY DRYWALL TO FRAME PRIOR TO PROCEEDING WITH FINAL FINISHES.
- J. ALL FLOOR AREAS UPON WHICH PREVIOUS WALLS WERE LOCATED SHALL BE REPAIRED BY THE REMOVAL OF LOOSE DEBRIS (FOLLOWING PARTITION REMOVAL) AND RESURFACED TO CAUSE THE NEW FINISH FLOOR LEVEL TO BE A SMOOTH TRANSITION BETWEEN MAINTAINED FLOOR AREAS AND REPAIRED PORTIONS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL EXISTING UTILITIES AND STRUCTURES BOTH VISIBLE AND OBSERVED BY OTHER ASSEMBLIES SUCH AS PAVEMENT, BUILT STRUCTURES, ETC. AT THE COMPLETION OF DEMOLITION. GENERAL CONTRACTOR SHALL BE FINANCIALLY RESPONSIBLE FOR ANY AND ALL PREPARATION REQUIREMENTS WHICH MAY RESULT FROM DAMAGE DURING THE CONSTRUCTION OF THE WORK SCHEDULED BY THE DEVELOPMENT PLANS.
- K. ALL DEMOLITION SCHEDULED BY THESE DOCUMENTS, OR AS MAY OTHERWISE BE REQUIRED BY PREVIOUSLY UNOBTAINED CONDITIONS, SHALL BE COORDINATED BY THE GENERAL CONTRACTOR WITH ALL TRADESMAN AND WITH FINAL DRAWINGS OR MODIFICATIONS THERETO, TO DETERMINE THE FINAL EXTENT OF THE REQUIRED WORK.
- L. ALL EXISTING MEANS OF EGRESS AND ALL FIRE PROTECTION FEATURES ARE TO BE MAINTAINED DURING ALL PHASES OF WORK.
- M. ANY DEMOLITION THAT INVOLVES REFRIGERANT OR OTHER HAZARDOUS MATERIALS SHALL BE CONDUCTED IN ACCORDANCE WITH ALL AUTHORITIES HAVING JURISDICTION OVER THE REMOVAL, CONTAINMENT AND DISPOSAL OF HAZARDOUS MATERIALS. REMOVE, STORE AND DISPOSE OF REFRIGERANT ACCORDING TO 40 CFR 82 AND REGULATIONS OF ALL AUTHORITIES HAVING JURISDICTION INCLUDING ALL EPA REGULATIONS AND PROCEDURES.
- N. CONTRACTOR TO ENSURE THAT ALL HISTORIC ELEMENTS INCLUDING BUT NOT LIMITED TO FABRIC, FINISHES, MATERIAL, COMPONENTS, ETC. SHALL BE PROTECTED FROM DAMAGE DURING THE DEMOLITION AND/OR CONSTRUCTION PROCESS. ANY DAMAGE AS A RESULT OF HISTORIC ELEMENTS NOT BEING PROPERLY PROTECTED FROM DAMAGE SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND/OR TRADES RESPONSIBLE FOR THE DAMAGE. ALL DAMAGED HISTORIC ELEMENTS SHALL BE PLACED IN LIKE NEW DEFECT FREE CONDITION WITH NO COST INCURRED BY THE OWNER.
- O. ALL NEW AND EXISTING THROUGH PENETRATIONS AT FIRE RATED ASSEMBLIES (FLOOR/CEILING AND/OR WALL ASSEMBLIES) SHALL BE PROTECTED WITH APPROVED FIRESTOPPING MATERIAL.

K. CERTIFICATION

We represent, warrant and certify to OHFA that the following does and will apply to the proposed development:

The Development will be designed and constructed to meet the requirements of all applicable laws, codes, program guidelines, as well as the OHFA Design and Architectural Standards and specific features applicable to the project as outlined in this form. This includes any and all local, state, or federal accessibility laws that currently exist and apply to the project. Any additional cost of construction required for the Development to be in compliance with any of these laws has been included in the development budget.

By signing this document, the owner, architect, and general contractor certify that the plans, specifications, and features submitted as part of this application will become a minimum standard for the proposed development. This hereby becomes a binding agreement for the actual construction intent if the development is awarded OHFA funding.

OHFA does not take responsibility for design, construction, and plan review or any other municipal or building department review or approval and in no way does this agreement supersede any requirement by such jurisdictions.

OHFA reserves the right to verify compliance with agreed-upon features including durability of materials, accessibility, universal design, green building requirements and energy efficiency components.

1. Architect:

I certify that the plans, specifications, and scope of work for the Development meet, and will continue to meet, any and all requirements including those set forth in this form, the OHFA Design and Architectural Standards, and all other applicable laws, codes, program guidelines or policy documents.

I understand that I am contractually obligated to know the federal, state and local accessibility laws applicable to the Development and have applied them accordingly. To the best of my professional knowledge and belief, I agree that the Development as designed is in compliance with all applicable federal, state and local housing and accessibility laws and regulations.

2. General Contractor:

I certify that I have reviewed the plans, specifications, and scope of work for the Development and that the Development will be constructed in accordance with any and all requirements as set forth in this form, the OHFA Design and Architectural Standards, and all other applicable laws, codes, program guidelines or policy documents.

I understand that I am obligated to know the federal, state and local accessibility laws applicable to the Development and will build the project accordingly.

3. Owner:

I certify that I have reviewed the plans, specifications, and scope of work for the Development and that the Development shall be constructed in accordance with any and all requirements as set forth in this form, OHFA Design and Architectural Standards, and all other applicable laws, codes, program guidelines or policy documents.

The undersigned understands that any deviations from federal and state accessibility requirements are the responsibility of the Owner and, as such, Owner is responsible for such deviations.

Further, if for any reason, the features are not constructed in accordance with the requirements set forth above, the undersigned understands that OHFA may revoke or recapture the Development’s funding and/or limit or prohibit the future participation of the undersigned, any subsidiaries or related entities in OHFA programs.

NPS Official Use Only

The National Park Service has reviewed the Historic Preservation Certification Application – Part 1 for the above-named property and has determined that the property:

- contributes to the significance of the above-named district or National Register property and is a "certified historic structure" for rehabilitation purposes.
- contributes to the significance of the above-named district and is a "certified historic structure" for a charitable contribution for conservation purposes.
- does not contribute to the significance of the above-named district or National Register property.

Preliminary Determinations:

- appears to meet the National Register Criteria for Evaluation and will likely be listed in the National Register of Historic Places if nominated by the State Historic Preservation Officer according to the procedures set forth in 36 CFR Part 60.
- does not appear to meet the National Register Criteria for Evaluation and will likely not be listed in the National Register.
- appears to contribute to the significance of a potential historic district, which will likely be listed in the National Register of Historic Places if nominated by the State Historic Preservation Officer.
- appears to contribute to the significance of a registered historic district if the period or area of significance as documented in the National Register nomination or district documentation on file with the NPS is expanded by the State Historic Preservation Officer.
- does not appear to qualify as a certified historic structure.

NPS Comments Attached

**HISTORIC PRESERVATION CERTIFICATION APPLICATION
NATIONAL PARK SERVICE
COMMENTS**

Historic Property Name Eastgate Apartments Historic District Project Number 46131
Property Address, City, State 1994 Maryland Ave., Columbus, OH

These comments respond to the Historic Preservation Certification Application –
 Part 1 Part 2 Part 3 Amendment

The National Park Service has reviewed the Historic Preservation Certification Application – Part 1 for the project cited above and has determined that the property will likely be listed if nominated by the OH SHPO. The draft nomination supports listing under Criterion C (Architecture) with a period of significance of 1958. In the opinion of this reviewer, the NR area of significance supporting this nomination should include Community Planning & Development. There may also be a justification for Social History/Ethnic Heritage (Blacks) as the displaced target community.

Because the proposed district contains more than one building/structure and those buildings/structures were functionally related historically to serve an overall purpose, program regulations require the NPS to determine which of the buildings contribute to the significance of the historic property, and are, therefore, considered to be "certified historic structures."

Based on the documentation presented, the following buildings appear to contribute to the significance of the property:

- 45 Quadplex Apartment Buildings
- Office Building

This determination is preliminary only. These buildings will become "certified historic structures" only when the district is listed in the National Register of Historic Places.

The documentation also indicates that the following buildings do not contribute to the significance of the property:

- Two non-historic utility buildings.

These buildings are not "certified historic structures" for purposes of rehabilitation.

Note: The proposed historic district includes an historically significant landscape design (site) that is integral to its significance.

Obtaining "certified historic structure" status is the first step in qualifying for maximum tax benefits under Federal Laws. These benefits apply only to structures that have either undergone or are about to undergo rehabilitation that can be certified in accordance with the Secretary of the Interior's Standards for Rehabilitation.

Program regulations also require NPS to review the rehabilitation work as a single overall project, and to issue rehabilitation certification on the merits of the overall project rather than for each structure. Consequently, if you intend to submit Part 2 of the application, the Description of Rehabilitation Work, it must describe all proposed work on the property, although the 20% investment tax credit is based only on costs for the rehabilitation of "certified historic structures."

If you have any questions, please call the State Historic Preservation Office or Roger Reed at roger_reed@nps.gov.

The National Park Service has reviewed and approved the application noted above.

NPS conditions or comments attached

HISTORIC PRESERVATION CERTIFICATION APPLICATION NATIONAL PARK SERVICE CONDITIONS

Historic Property Name Eastgate Apartments Project Number 46131
Property Address, City, State 1994 Maryland Avenue, Columbus, OH

The rehabilitation of this property as described in the Historic Preservation Certification Application will meet the Secretary of the Interior's Standards for Rehabilitation provided that the following condition(s) is/are met:

1. **Windows:** Neither the proposed 1/1 vinyl windows nor the proposed 6/6 windows are not compatible with the historic character of the townhome style buildings at the Eastgate Apartments. The property retains a mid-century character and residential windows of that type and period were historically horizontally divided-lite windows in a brushed metal finish, as seen in the submitted plans and in the c.1970s photo. In this instance, two-over-two windows with a horizontal spacer bar in a brushed metal finish with a similar size/proportion to the window openings seen in the historic documentation would be compatible with the Standards. In order to ensure the proposed windows meet the Standards, detailed dimensioned drawings of any proposed replacement windows, showing them in relationship to the wall assembly, must be submitted for review and approval once a manufacturer has been selected.
2. **Sitework:** Sitework, including, but not limited to, signage, playground equipment, bike racks, parking lots, sidewalks, lawns, retaining walls, lampposts/lighting and security cameras, must be compatible with the historic character of the property. Detailed plans and fixture selections, must be submitted via amendment for review and approval by the Ohio SHPO and NPS prior to starting work.

Photographs documenting that the conditions have been met must be submitted with the Request for Certification of Completed Work.

Any substantive change in the work as described in the application should be brought to the attention of the State Historic Preservation Office and the National Park Service in writing, using the Amendment/Advisory Determination form, prior to execution to ensure that the proposed project continues to meet the Standards.

The National Park Service has determined that this project will meet the Secretary of the Interior Standards for Rehabilitation if the condition(s) listed above are met.

Re: Request for Section 106 Review
Nelson Park Apartments
Columbus, Franklin County, Ohio
ODOD HOME Grant Agreement No. N-B-22-9AA-1-22-0267

ODOD HOME-FUNDED PROJECT

Dear JoLayne S. Morneau:

On behalf of the Ohio Department of Development (ODOD), Crawford, Murphy & Tilly, Inc. requests a Section 106 Review of the proposed substantial rehabilitation and adaptive reuse of the existing 177 units of multi-family and senior housing in 45 multi-family apartment buildings in Columbus, Franklin County, Ohio. The project will receive federal HOME funds distributed by the Ohio Department of Development, as well as City of Columbus HOME funds. A previous request for a Section 106 review was sent to OHPO on July 17, 2023, and CMT has since received updated plans for the project. Please disregard the original request and proceed with this up-to-date letter.

The project will rehabilitate 44 of the existing apartment buildings, convert the existing community center/office to its original use as apartments and adaptively reuse three of the apartment buildings as a new office and maintenance buildings, resulting in a total of 137 units in 42 lived in buildings and 45 total being renovated or reused for the proposed project. One of the 45 multi-family apartment buildings is currently being used as a community center and office. There are two buildings in the project area used for maintenance and storage; the maintenance building located in the northeast corner of the project site will be demolished and the other will be preserved.

The project has received Part 1 and Part 2 approval for historic tax credits for 45 buildings to be renovated at the project site. The National Park Service (NPS) project number is listed in the below table. Copies of the Part 1 and Part 2 NPS approvals are attached. The project has not yet received OHPO Part 2/3 approval.

ADDRESS	NPS PROJECT NO.
1994 Maryland Avenue	46131

The project site is located at 1994 Maryland Avenue in the Near East Area neighborhood of Columbus. The site is currently developed with 45 two-story brick residential buildings, with one currently being used as an office and the existing community center, and two maintenance/storage buildings, built in 1958 and renovated around 1980. The first historical records for the property in 1887 show the subject property as undeveloped with naturally vegetated land. By 1938 the property was converted to mainly agriculture land as seen on the historical aerial map before the development of the existing apartment complex. A portion of the site in the northwestern corner of the project contains a one-story brick utility building that is not owned by the project team. A detailed description of each building and the planned

renovations/demolition may be found in the attached approved Historic Preservation Certification Application, State Historic Preservation Office Review and Recommendation Sheets.

The project is bound by an Amazon Distribution Center and associated parking lot to the north, North Nelson Road followed by a wooded lot and Alum Creek to the east, Maryland Avenue followed by a single-family residential neighborhood to the south, and Sunbury Road followed by a railroad and wooded lot to the west. No other buildings in the project neighborhood are undergoing active renovation. The neighborhood incorporates a mix of uses and building styles, including single-family residential homes and multi-family residential buildings that were built during a similar period as the existing multi-family buildings remaining at the site, a modern multi-family residential building, an Amazon Distribution Center and associated parking lot, multiple commercial facilities, churches, and a school. All residential buildings in the project area are between two and three stories high and have similar setbacks at the edge of the sidewalks. The commercial businesses, churches, and the school range in height and have varying setbacks from the edge of the sidewalks.

The project site was listed on the National Register of Historic Places on November 11, 2023. Within 500 meters of the project site boundary, there are seven buildings that are listed on the Ohio Historic Inventory (OHI), one state historic district, one previous Phase 1 Archeological Survey, and one NRHP listed building. The historic previously surveyed area is located approximately 180 feet south of the project site. One unnamed historic structure (FRA0101519) is located approximately 100 feet east of the project site along the east side of North Nelson Road, partially covered by the tree line. None of the other buildings or sites are located adjacent to the project area.

The proposed project will renovate 45 existing buildings at the project site and demolish one maintenance building. The renovation will be performed using historic tax credits and will be required to comply with all conditions of the historic tax credit review, including meeting the Secretary of the Interior's Standards for the Treatment of Historic Properties, as a condition of receiving HOME funds. Based on these conditions and the information provided above, the project is expected to have no adverse effects to historic properties.

Enclosed please find county and USGS location maps, an aerial map, photographs of the project site and surroundings, building plans and elevations, the approved NPS Part 1 and NPS Part 2 forms for the renovation, a renovation scope of services, and information from OHPO's on-line mapping system. A copy of this letter and OHPO's response will be placed in the environmental review record for the proposed project to document coordination with the State Historic Preservation Officer.

Please contact me at 614.468.1211 or via email at atadda@cmtengr.com if you have any questions or concerns.

Sincerely,

Crawford, Murphy & Tilly, Inc.

**RE: Section 106 Review
Nelson Park Apartments – ODOB HOME-FUNDED Project
Grant Number: N-B-22-9AA-1-22-0267
Location: 1994 Maryland Avenue, Columbus, Franklin County, Ohio**

Dear Mr. Tadda:

This is in response to your most recent correspondence received January 15, 2024, regarding the planned rehabilitation project for the above referenced address using funding from the Ohio Department of Development. The comments of the Ohio State Historic Preservation Office (SHPO) are made in accordance with the provisions of Section 106 of the National Historic Preservation Act of 1966, as amended (54 U.S.C. 306108 [36 CFR 800]).

The planned project will rehabilitate 44 of the existing apartment buildings, convert the existing community center/office to its original use as apartments and adaptively reuse three of the apartment buildings as a new office, and maintenance buildings, resulting in a total of 137 units in 42 lived in buildings and 45 total being renovated or reused for the proposed project. Since these properties are included in the National Register of Historic Places (NRHP) listed Eastgate Apartments Historic District (NR Ref #SG100009503), the project must meet the Secretary of the Interior's Standards for Rehabilitation (Standards) in order to avoid adverse effects. Your submission states that this project was submitted to the Technical Preservation Services (TPS) of the SHPO for state and federal historic tax credits and it has received approval from the National Park Service (NPS) for Part 1 and Part 2 of the historic tax credit process.

Based on available information, it is the opinion of the SHPO that the planned work, if completed as proposed and with the following **conditions**, will meet the Standards thereby having **no adverse effect** on historic properties. The conditions include:

1. All finished work must be submitted to the TPS department and approved by the SHPO and NPS at Part 3.

Alex Tadda
CM & T
January 31, 2024
Page 2

No further coordination is necessary with the Resource Protection and Review Department of SHPO unless the condition cannot be met or the applicant decides not to pursue the tax credits.

If you have questions regarding this review, please contact JoLayne Morneau either by email at jmorneau@ohiohistory.org or by phone at 614-298-2000. Thank you for your cooperation.

Sincerely,

Kristen Koehlinger

Department Head & Deputy State Historic Preservation Officer for
Resource Protection and Review

Nelson Park Apartments (22-0267) Franklin Co., Columbus, OH
NRCS SSURGO Soil Survey Map

Map Unit Description (Brief, Generated)

Franklin County, Ohio

[Minor map unit components are excluded from this report]

Map unit: CbC - Cardington-Urban land complex, 6 to 12 percent slopes

Component: Cardington (45%)

The Cardington component makes up 45 percent of the map unit. Slopes are 6 to 12 percent. This component is on ground moraines. The parent material consists of loamy till. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 30 inches during January, February, March, April, November, December. Organic matter content in the surface horizon is about 2 percent. This component is in the F111EY503OH Till Ridge ecological site. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 14 percent.

Component: Urban land (30%)

Generated brief soil descriptions are created for major soil components. The Urban land is a miscellaneous area.

Map unit: EmA - Eldean-Urban land complex, 0 to 2 percent slopes

Component: Eldean (45%)

The Eldean component makes up 45 percent of the map unit. Slopes are 0 to 2 percent. This component is on outwash terraces. The parent material consists of silty and clayey outwash over sandy and gravelly outwash. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R111AY017IN Dry Outwash Mollisol, Dry Outwash Upland ecological site. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 52 percent.

Component: Urban land (30%)

Generated brief soil descriptions are created for major soil components. The Urban land is a miscellaneous area.

Map unit: WdB - Warsaw silt loam, 2 to 6 percent slopes

Component: Warsaw (85%)

The Warsaw component makes up 85 percent of the map unit. Slopes are 2 to 6 percent. This component is on outwash plains. The parent material consists of fine-loamy outwash over sandy and gravelly outwash. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. This component is in the R111AY017IN Dry Outwash Mollisol ecological site. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 20 percent.

Hydric Soils

Franklin County, Ohio

[This report lists only those map unit components that are rated as hydric. Dashes (---) in any column indicate that the data were not included in the database. Definitions of hydric criteria codes are included at the end of the report]

Hydric Soils

This table lists the map unit components that are rated as hydric soils in the survey area. This list can help in planning land uses; however, onsite investigation is recommended to determine the hydric soils on a specific site (National Research Council, 1995; Hurt and others, 2002).

The three essential characteristics of wetlands are hydrophytic vegetation, hydric soils, and wetland hydrology (Cowardin and others, 1979; U.S. Army Corps of Engineers, 1987; National Research Council, 1995; Tiner, 1985). Criteria for all of the characteristics must be met for areas to be identified as wetlands. Undrained hydric soils that have natural vegetation should support a dominant population of ecological wetland plant species. Hydric soils that have been converted to other uses should be capable of being restored to wetlands.

Hydric soils are defined by the National Technical Committee for Hydric Soils (NTCHS) as soils that formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part (Federal Register, 1994). These soils, under natural conditions, are either saturated or inundated long enough during the growing season to support the growth and reproduction of hydrophytic vegetation.

The NTCHS definition identifies general soil properties that are associated with wetness. In order to determine whether a specific soil is a hydric soil or nonhydric soil, however, more specific information, such as information about the depth and duration of the water table, is needed. Thus, criteria that identify those estimated soil properties unique to hydric soils have been established (Federal Register, 2002). These criteria are used to identify map unit components that normally are associated with wetlands. The criteria used are selected estimated soil properties that are described in "Soil Taxonomy" (Soil Survey Staff, 1999) and "Keys to Soil Taxonomy" (Soil Survey Staff, 2003) and in the "Soil Survey Manual" (Soil Survey Division Staff, 1993).

If soils are wet enough for a long enough period of time to be considered hydric, they should exhibit certain properties that can be easily observed in the field. These visible properties are indicators of hydric soils. The indicators used to make onsite determinations of hydric soils are specified in "Field Indicators of Hydric Soils in the United States" (Hurt and others, 2002).

Hydric soils are identified by examining and describing the soil to a depth of about 20 inches. This depth may be greater if determination of an appropriate indicator so requires. It is always recommended that soils be excavated and described to the depth necessary for an understanding of the redoximorphic processes. Then, using the completed soil descriptions, soil scientists can compare the soil features required by each indicator and specify which indicators have been matched with the conditions observed in the soil. The soil can be identified as a hydric soil if at least one of the approved indicators is present.

Map units that are dominantly made up of hydric soils may have small areas, or inclusions, of nonhydric soils in the higher positions on the landform, and map units dominantly made up of nonhydric soils may have inclusions of hydric soils in the lower positions on the landform.

The criteria for hydric soils are represented by codes in the table (for example, 2B3). Definitions for the codes are as follows:

1. All Histels except for Folistels, and Histosols except for Folists.
2. Soils in Aquic suborders, great groups, or subgroups, Albolls suborder, Historthels great group, Histoturbels great group, Pachic subgroups, or Cumulic subgroups that:
 - A. are somewhat poorly drained and have a water table at the surface (0.0 feet) during the growing season, or
 - B. are poorly drained or very poorly drained and have either:
 - 1) a water table at the surface (0.0 feet) during the growing season if textures are coarse sand, sand, or fine sand in all layers within a depth of 20 inches, or
 - 2) a water table at a depth of 0.5 foot or less during the growing season if permeability is equal to or greater than 6.0 in/hr in all layers within a depth of 20 inches, or
 - 3) a water table at a depth of 1.0 foot or less during the growing season if permeability is less than 6.0 in/hr in any layer within a depth of 20 inches.
3. Soils that are frequently ponded for long or very long duration during the growing season.
4. Soils that are frequently flooded for long or very long duration during the growing season.

April 24, 2023

Project Code: 2023-0073275

Project Name: ODOB, Nelson Park apartments, Grant No. N-B-22-9AA-1-22-0267

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2) (c)). For projects other than major construction activities, the Service suggests that a biological

evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

<http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF>

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts see <https://www.fws.gov/birds/policies-and-regulations.php>.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures see <https://www.fws.gov/birds/bird-enthusiasts/threats-to-birds.php>.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit <https://www.fws.gov/birds/policies-and-regulations/executive-orders/e0-13186.php>.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

PROJECT SUMMARY

Project Code: 2023-0073275

Project Name: ODOD, Nelson Park apartments, Grant No. N-B-22-9AA-1-22-0267

Project Type: Residential Construction

Project Description: Nelson Park Apartments involves the acquisition and rehabilitation of an existing 177-unit affordable housing development in Columbus's Eastgate neighborhood. The redevelopment will result in 137 units in 41 residential buildings with one-, two- and three-bedroom townhomes serving both families and seniors. No tree clearing is expected as part of this project.

Project Location:

The approximate location of the project can be viewed in Google Maps: <https://www.google.com/maps/@39.977845099999996,-82.94958782642071,14z>

Counties: Franklin County, Ohio

ENDANGERED SPECIES ACT SPECIES

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries¹, as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

Re: ESA Section 7 Not Likely to Adversely Affect (MANLAA) Concurrence Request
Nelson Park Apartments (39.977478, -82.94973)
Columbus, Franklin County, Ohio
Grant Number N-B-22-9AA-1-22-0267

Dear Ms. Ashfield:

The Nelson Park Apartments project is receiving federal HOME funds originating with the Department of Housing and Urban Development (HUD), awarded to and distributed by the Ohio Department of Development (ODOD). ODOD contracts with Crawford, Murphy & Tilly, Inc. (CMT) to perform the NEPA review on their behalf. On that basis, we are acting on behalf of ODOD with respect to the HOME funds to complete consultation under Section 7 of the Endangered Species Act.

On behalf of ODOD, CMT requests concurrence from the U.S. Fish and Wildlife Service (USFWS) that the proposed housing project *may affect* but is *not likely to adversely affect* the endangered Indiana bat (*Myotis sodalis*), the threatened northern long-eared bat (*Myotis septentrionalis*), and the proposed endangered tri-colored bat (*Perimyotis subflavus*). The proposed substantial rehabilitation of an existing 177-unit affordable housing development is located in Columbus, Franklin County, Ohio.

The approximately 9.5-acre project site is located at 1994 Maryland Avenue. The site is currently developed with 47 two-story residential buildings and a maintenance building. A portion of the site in the northwestern corner of the project contains a one-story brick utility building that is not owned by the project team. There are trees and shrubs that are scattered throughout the site. No streams, wetlands, or forested areas are mapped on the project site. The nearest surface water, Alum Creek, is located approximately 340 feet east of the project site. Work on the site includes the demolition of the maintenance building and pavement, adaptive reuse of the three buildings on the western portion of the project site for a new community center and maintenance facility, and the rehabilitation of all other project buildings as affordable apartments. The project team has indicated that some individual trees may require removal to accommodate construction.

The project is bounded by an Amazon Distribution Center and associated parking lot to the north, North Nelson Road followed by a wooded lot and Alum Creek to the east, Maryland Avenue followed by a single-family residential neighborhood to the south, and Sunbury Road followed by a railroad and wooded lot to the west.

Any tree cutting and trimming that is deemed necessary in association with the Nelson Park Apartments project will be restricted to between October 1 and March 31 for any trees three inches dbh or greater. If the project

developer cannot comply with seasonal restrictions, the project team will be required to perform appropriate surveys for bat species as directed by USFWS. According to the USFWS Franklin County list of endangered and threatened species, the round hickorynut (*Obovaria subrotunda*) and the salamander mussel (*Simpsonaias ambigua*) are also found within the county. Since no suitable surface waters for these species are present on the project site or will be impacted by the project, the project will have *no effect* on these species.

Based on the urban nature of the site, lack of anticipated impacts to nearby surface waters and the fact that tree clearing and trimming will be limited to the bat inactive season (October 1 to March 31), we conclude that the proposed action *may affect*, but is *not likely to adversely affect* the Indiana bat, northern long-eared bat, and tri-colored bat. On behalf of ODOT, we request your concurrence with our determination.

Attached, please find a USGS topographic location map, an aerial map, project site photos, and the project site/landscaping plan. A copy of this letter and USFWS's response will be placed in the environmental review record for the proposed project to document this coordination.

Please feel free to contact me by email at atadda@cmtengr.com or by phone at 614-468-1211 if you have any questions or concerns.

Sincerely,

CRAWFORD, MURPHY & TILLY, INC.

December 21, 2023

Project Code: 2023-0073275

Dear Mr. Tadda:

The U.S. Fish and Wildlife Service (Service) has received your recent correspondence requesting information about the subject proposal. We offer the following comments and recommendations to assist you in minimizing and avoiding adverse impacts to threatened and endangered species pursuant to the Endangered Species Act of 1973 (16 U.S.C. 1531 et seq), as amended (ESA). Pursuant to the U.S. Department of Housing and Urban Development's (HUD) regulations 24 CFR 58.5(e), you are acting as the non-federal representative of HUD for the purposes of ESA section 7 consultation.

The Service has reviewed your project description and concurs with your determination that the project, as proposed, is not likely to adversely affect the federally endangered Indiana bat (*Myotis sodalis*) or northern long-eared bat (*Myotis septentrionalis*). This is based on the commitment to cut all trees ≥ 3 inches diameter at breast height only between October 1 and March 31 in order to avoid adverse effects to the Indiana bat and northern long-eared bat.

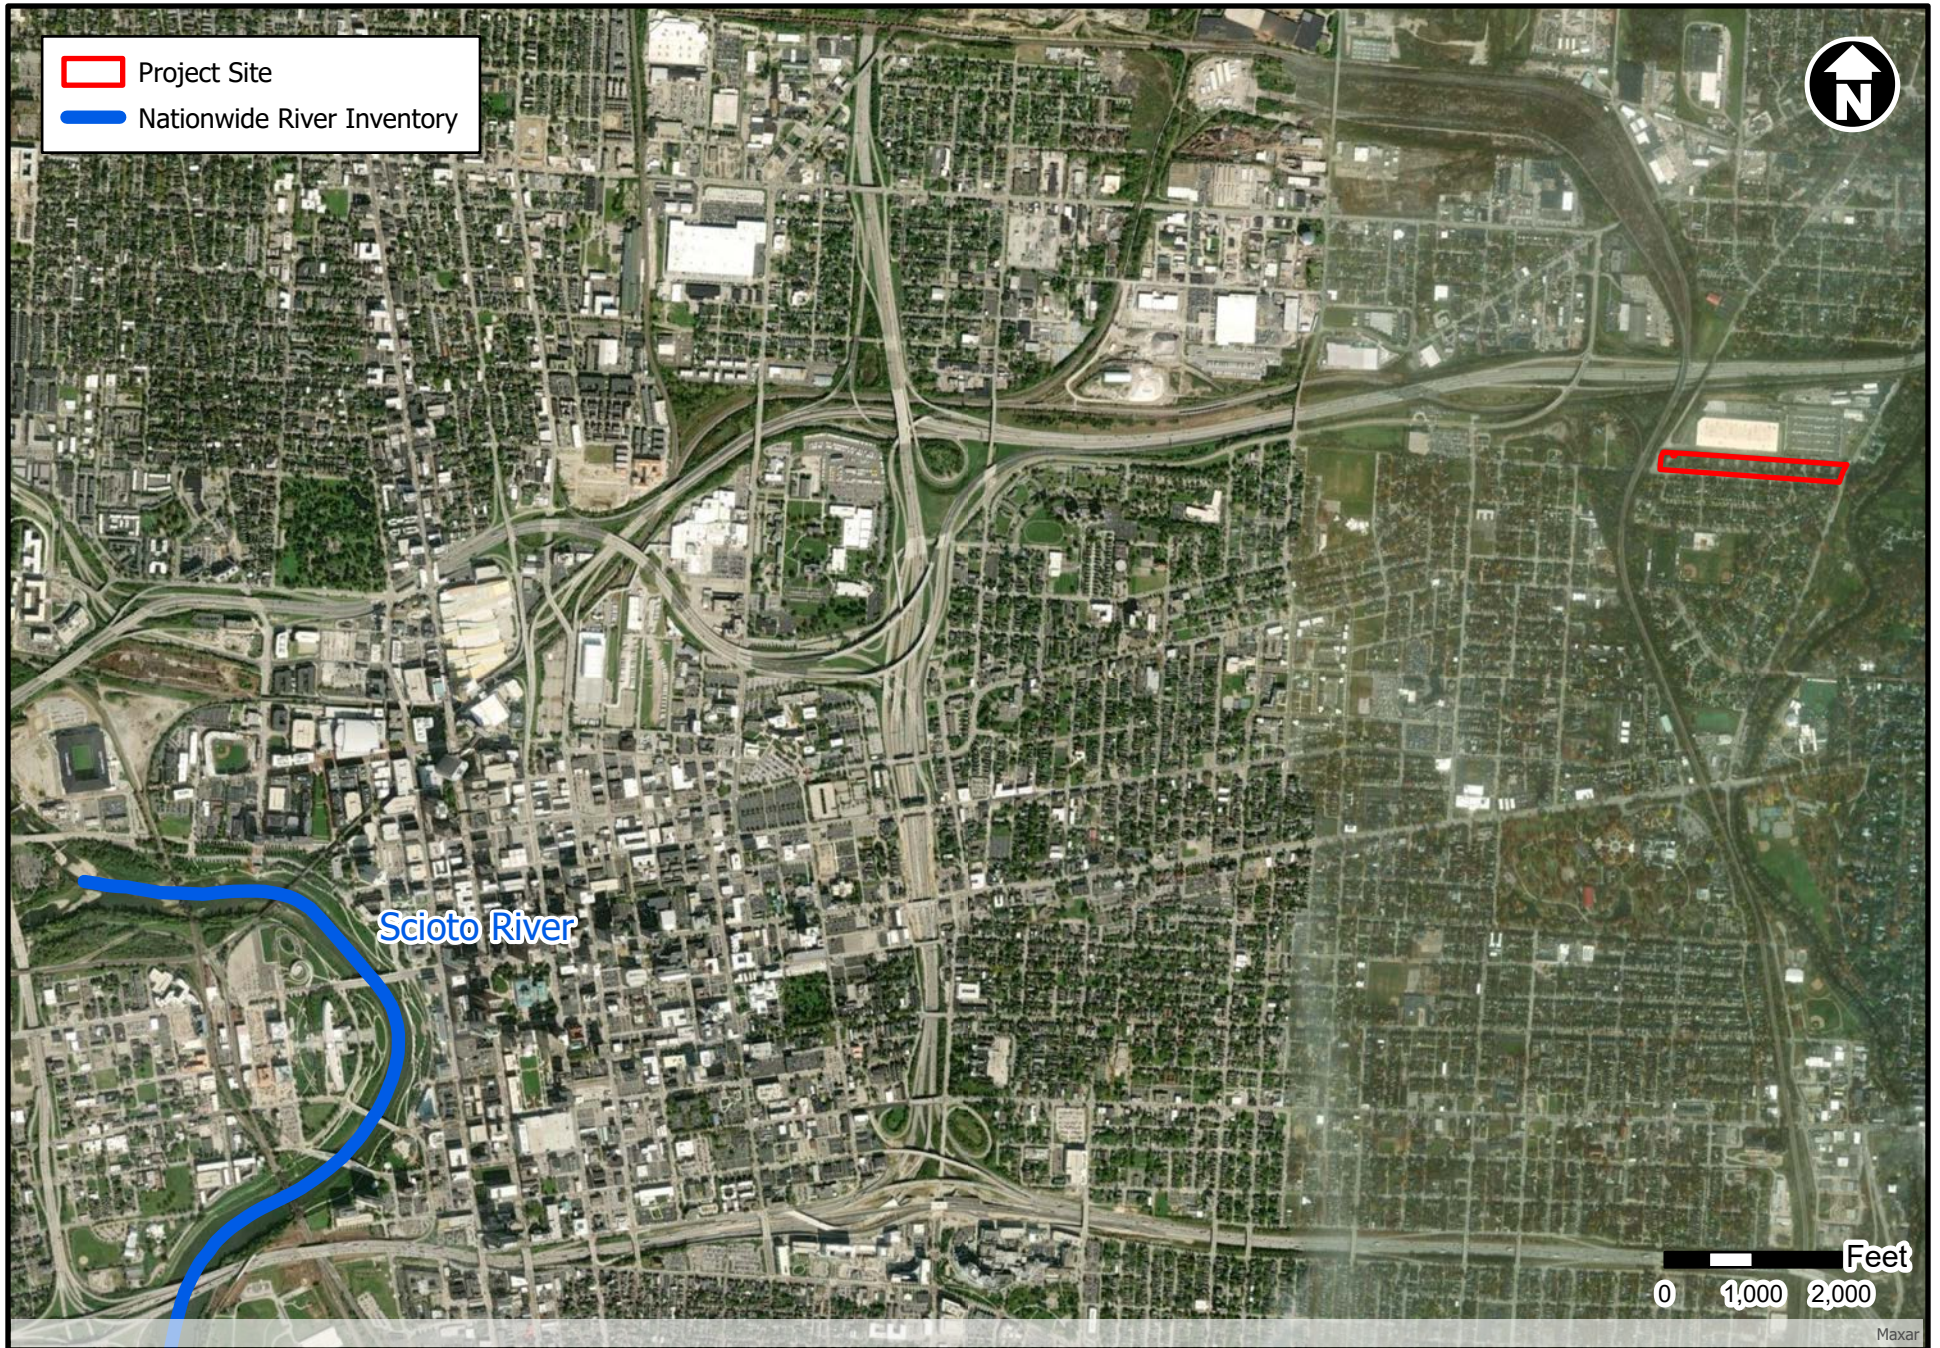

This concludes consultation on this action as required by section 7(a)(2) of the ESA. Should, during the term of this action, additional information on listed or proposed species or their critical habitat become available, or if new information reveals effects of the action that were not previously considered, consultation with the Service should be reinitiated to assess whether the determinations are still valid.

If you have questions, or if we can be of further assistance in this matter, please contact our office at (614) 416-8993 or ohio@fws.gov.

Sincerely,

Scott Hicks
Acting Field Office Supervisor

Smog—Who Does It Hurt?

What You Need to Know About Ozone and Your Health

Smog—Who Does It Hurt?

What You Need to Know About Ozone and Your Health

On a hot, smoggy summer day, have you ever wondered: Is the air safe to breathe? Should I be concerned about going outside?

In fact, breathing smoggy air can be hazardous because smog contains ozone, a pollutant that can harm our health when there are elevated levels in the air we breathe. This publication will tell you what kinds of health effects ozone can cause, when you should be concerned, and what you can do to avoid dangerous exposures.

What is ozone?

Ozone is an odorless, colorless gas composed of three atoms of oxygen. Ozone occurs both in the Earth's upper atmosphere and at ground level. Ozone can be good or bad, depending on where it is found:

■ **Good Ozone.** Ozone occurs naturally in the Earth's upper atmosphere—10 to 30 miles above the Earth's surface—where it forms a protective layer that shields us from the sun's harmful ultraviolet rays. This "good" ozone is gradually being destroyed by

manmade chemicals. An area where ozone has been most significantly depleted—for example, over the North or South pole—is sometimes called a "hole in the ozone."

■ **Bad Ozone.** In the Earth's lower atmosphere, near ground level, ozone is formed when pollutants emitted by cars, power plants, industrial boilers, refineries, chemical plants, and other sources react chemically in the presence of sunlight.

The booklet *Ozone: Good Up High, Bad Nearby*, which can be found on the web at <http://www.epa.gov/oar/oaqps/gooduphigh>, contains additional information about both good and bad ozone.

This publication, *Smog—Who Does It Hurt?*, focuses on bad ozone—that is, ozone that occurs at ground level and can affect the health of people who breathe it.

Ozone, when it occurs at ground level, presents a serious air quality problem in many parts of the United States. When inhaled—even at very low levels—ozone can cause a number of respiratory health effects.

Children and adults of all ages who are active outdoors are at risk from ozone exposure.

Should I be concerned about exposure to ground-level ozone?

That depends on who you are and how much ozone is in the air. Most people only have to worry about ozone exposure when ground-level concentrations reach high levels. In many U.S. communities, this can happen frequently during the summer months. In general, as ground-level ozone concentrations increase, more and more people experience health effects, the effects become more serious, and more people are admitted to the hospital for respiratory problems. When ozone levels are very high, *everyone* should be concerned about ozone exposure.

Scientists have found that about one out of every three people in the United States is at a higher risk of experiencing ozone-related health effects (see box on page 3). If you are a member of a “sensitive group,” you should pay special attention to ozone levels in your area. This publication describes several tools that the U.S. Environmental Protection Agency (EPA), in partnership with State and local agencies, has developed to inform the public about local ozone levels. These tools provide the information you need to decide whether ozone levels on any particular day may be harmful to you. When ozone concen-

trations reach unhealthy levels, you can take simple precautions (described on page 6 in “What can I do to avoid unhealthy exposure to ozone?”) to protect your health.

How might ozone affect my health?

Scientists have been studying the effects of ozone on human health for many years. So far, they have found that ozone can cause several types of short-term health effects in the lungs:

- **Ozone can irritate the respiratory system.** When this happens, you might start coughing, feel an irritation in your throat, and/or experience an uncomfortable sensation in your chest. These symptoms can last for a few hours after ozone exposure and may even become painful.
- **Ozone can reduce lung function.** When scientists refer to “lung function,” they mean the volume of air that you draw in when you take a full breath and the speed at which you are able to blow it out. Ozone can make it more difficult for you to breathe as deeply and vigorously as you normally would. When this happens, you may notice that breathing starts to feel uncomfortable. If you are exercising or working outdoors, you may notice that you are taking more rapid and shallow breaths than normal. Reduced lung function can be a particular problem for outdoor workers, competitive athletes, and other people who exercise outdoors.
- **Ozone can aggravate asthma.** When ozone levels are high, more asthmatics have asthma attacks that require a doctor’s attention or the use of additional medication. One reason this happens is that ozone makes people more sensitive to allergens, which are the most common triggers for asthma attacks. (Allergens come from dust mites, cockroaches, pets, fungus, and pollen.) Also, asthmatics are more severely affected by the reduced lung function and irritation that ozone causes in the respiratory system.

■ **Ozone can inflame and damage the lining of the lung.** Some scientists have compared ozone's effect on the lining of the lung to the effect of sunburn on the skin. Ozone damages the cells that line the air spaces in the lung. Within a few days, the damaged cells are replaced and the old cells are shed—much in the way that skin peels after a sunburn. If this kind of damage occurs repeatedly, the lung may change permanently in a way that could cause long-term health effects and a lower quality of life.

■ **Scientists suspect that ozone may have other effects on people's health.** Ozone may aggravate chronic lung diseases, such as emphysema and bronchitis. Also, studies in animals suggest that ozone may reduce the immune system's ability to fight off bacterial infections in the respiratory system. Most of these effects are considered to be short-term effects because they eventually cease once the individual is no longer exposed to elevated levels of ozone. However, scientists are concerned that repeated short-term

Who is most at risk from ozone?

Four groups of people, described below, are particularly sensitive to ozone. These groups become sensitive to ozone when they are active outdoors, because physical activity (such as jogging or outdoor work) causes people to breathe faster and more deeply. During activity, ozone penetrates deeper into the parts of the lungs that are more vulnerable to injury. Sensitive groups include:

■ **Children.** Active children are the group at highest risk from ozone exposure. Such children often spend a large part of their summer vacation outdoors, engaged in vigorous activities either in their neighborhood or at summer camp. Children are also more likely to have asthma or other respiratory illnesses. Asthma is the most common chronic disease for children and may be aggravated by ozone exposure.

■ **Adults who are active outdoors.** Healthy adults of all ages who exercise or work vigorously outdoors are considered a "sensitive group" because they have a higher level of exposure to ozone than people who are less active outdoors.

■ **People with respiratory diseases,** such as asthma. There is no evidence that ozone causes asthma or other chronic respiratory disease, but these diseases do make the lungs more vulnerable to the effects of ozone. Thus, individuals with these conditions will generally experience the effects of ozone earlier and at lower levels than less sensitive individuals.

■ **People with unusual susceptibility to ozone.** Scientists don't yet know why, but some healthy people are simply more sensitive to ozone than others. These individuals may experience more health effects from ozone exposure than the average person.

Scientists have studied other groups to find out whether they are at increased risk from ozone. So far there is little evidence to suggest that either the elderly or people with heart disease have heightened sensitivity to ozone. However, like other adults, elderly people will be at higher risk from ozone exposure if they suffer from respiratory disease, are active outdoors, or are unusually susceptible to ozone as described above.

This photo shows a healthy lung airway (top) and an inflamed lung airway (bottom). Ozone can inflame the lung's lining, and repeated episodes of inflammation may cause permanent changes in the lung.

How do scientists know about the health effects of ozone?

A volunteer in an ozone research study breathes into a spirometer—a device that measures lung function.

EPA has gathered a great deal of information about the health effects of ozone. This information comes from a number of sources, including animal research, studies that compare health statistics and ozone levels within communities, and controlled testing of human volunteers to determine how ozone affects lung function. In these studies, volunteers are exposed to ozone in specially designed chambers where their responses can be carefully measured. Volunteers are prescreened in medical examinations to determine their health status, and they are never exposed to ozone levels that exceed those found in major cities on a very smoggy day.

Though our understanding of ozone's effects has increased substantially in recent years, many important questions still remain to be investigated. For example, does repeated short-term exposure to high levels of ozone cause permanent lung damage? Does repeated exposure during childhood to high levels of ozone cause reduced lung function in adults? Scientists are continuing to study these and other questions to gain a better understanding of ozone's effects.

damage from ozone exposure may permanently injure the lung. For example, repeated ozone impacts on the developing lungs of children may lead to reduced lung function as adults. Also, ozone exposure may speed up the decline in lung function that occurs as a natural result of the aging process. Research is underway to help us better understand the possible long-term effects of ozone exposure.

How can I tell if I am being affected by ozone?

Often, people exposed to ozone experience recognizable symptoms, including coughing, irritation in the airways, rapid or shallow breathing, and discomfort when breathing or general discomfort in the chest. People with asthma may experience asthma attacks. When ozone levels are higher than normal, any of these symptoms may indicate that you should minimize the time spent outdoors, or at least reduce your activity level, to protect your health until ozone levels decline.

Ozone damage also can occur without any noticeable signs. Sometimes there are no symptoms, or sometimes they are too subtle to notice. People who live in areas where ozone levels are frequently high may find that their initial symptoms of ozone exposure go away

over time—particularly when exposure to high ozone levels continues for several days. This does not mean that they have developed resistance to ozone. In fact, scientists have found that ozone continues to cause lung damage even when the symptoms have disappeared. The best way to protect your health is to find out when ozone levels are elevated in your area and take simple precautions to minimize exposure even when you don't feel obvious symptoms.

How can I find out about ozone levels in my area?

EPA and State and local air agencies have developed a number of tools to provide people with information on local ozone levels, their potential health effects, and suggested activities for reducing ozone exposure.

Air Quality Index. EPA has developed the Air Quality Index, or AQI, (formerly known as the Pollutant Standards Index) for reporting the levels of ozone and other common air pollutants. The index makes it easier for the public to understand the health significance of air pollution levels. Air quality is measured by a nationwide monitoring system that records concentrations of ozone and several other air pollutants at more than a thousand locations across the country.

EPA “translates” the pollutant concentrations to the standard AQI index, which ranges from 0 to 500. The higher the AQI value for a pollutant, the greater the danger. An AQI value of 100 usually corresponds to the national ambient air quality standard (NAAQS) for the pollutant. These standards are established by EPA under the Clean Air Act to protect public health and the environment.

The AQI scale has been divided into distinct categories, each corresponding to a different level of health concern. In the table below, the AQI ranges are shown in the middle column and the associated air quality descriptors are shown in the right column. The left column shows the ozone concentrations, measured in parts per million (ppm), that correspond to each category.

Though the AQI scale extends to 500, levels above 300 rarely occur in the United States. This publication and most other references to the AQI do not list health effects and cautionary statements for levels above 300. If ozone levels above 300 should ever occur, everyone should avoid physical exertion outdoors.

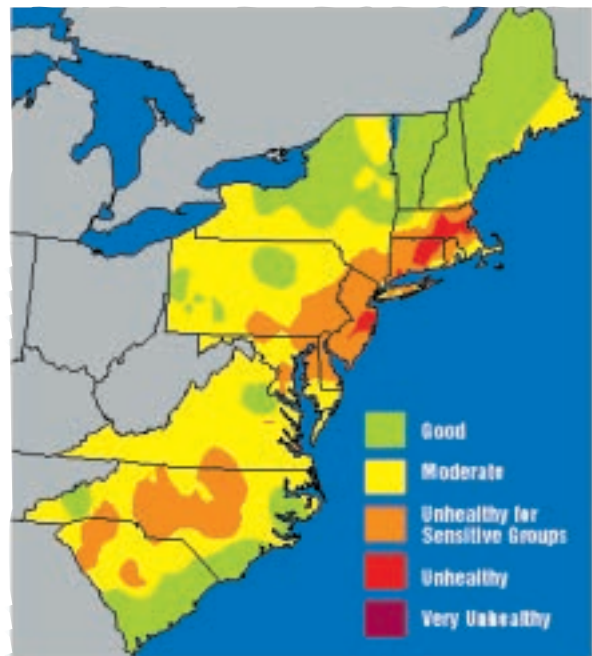

When pollutant levels are high, states are required to report the AQI in large metropolitan areas (populations over 350,000) of the United States. You may see the AQI for ozone reported in your newspaper, or your local television or radio weathercasters may use the AQI to provide information about

ozone in your area. Here’s the type of report you might hear:

The Air Quality Index today was 160. Air quality was unhealthy due to ozone. Hot, sunny weather and stagnant air caused ozone in Center City to rise to unhealthy levels.

AQI Colors. To make it easier for the public to quickly understand the air quality in their communities, EPA has assigned a specific color to each AQI category. You will see these colors when the AQI is reported in a color format—such as in a color-print newspaper, on television broadcasts, or on your State or local air pollution agency’s web site. This color scheme can help you quickly determine whether air pollutants are reaching unhealthy levels in your area. For example, the color orange means that conditions are “unhealthy for sensitive groups,” the color red means that conditions are “unhealthy” for everyone, and so on.

Ozone Maps. In many areas of the country, measurements of ozone concentrations are converted into color contours of the AQI categories (green, yellow, orange, red, and purple, shown below) and displayed on a map (see example above) to show ozone levels

This map shows ozone levels in the eastern United States on August 24, 1998. Ozone maps are updated several times daily to show how ozone levels change throughout the day.

Ozone Concentration (ppm) (8-hour average, unless noted)	Air Quality Index Values	Air Quality Descriptor
0.0 to 0.064	0 to 50	Good
0.065 to 0.084	51 to 100	Moderate
0.085 to 0.104	101 to 150	Unhealthy for Sensitive Groups
0.105 to 0.124	151 to 200	Unhealthy
0.125 (8-hr.) to 0.404 (1-hr.)	201 to 300	Very Unhealthy

In general, when ozone levels are elevated, your chances of being affected by ozone increase the longer you are active outdoors and the more strenuous the activity you engage in.

in the local area. The map is updated throughout the day and shows how ozone builds during hot summer days. In some areas, ozone maps are used to show a forecast of ozone levels for the next day. Once you understand the color scheme, you can use the maps to quickly determine whether ozone concentrations are reaching unhealthy levels in your area. Ozone maps appear on some televised weather broadcasts and are also available from EPA's web site at <http://www.epa.gov/airnow>.

What can I do to avoid unhealthy exposure to ozone?

You can take a number of steps. The chart on page 7 tells you what types of health effects may occur at specific ozone concentrations and what you can do to avoid them. If you are a parent, keep in mind that your children are likely to be at higher risk, particularly

if they are active outdoors. You may therefore want to pay special attention to the guidance for sensitive groups.

In general, when ozone levels are elevated, your chances of being affected by ozone increase the longer you are active outdoors and the more strenuous the activity you engage in. Scientific studies show that:

- At ozone levels above 0.12 ppm, heavy outdoor exertion for short periods of time (1 to 3 hours) can increase your risk of experiencing respiratory symptoms and reduced lung function.
- At ozone levels between 0.08 and 0.12 ppm, even moderate outdoor exertion for longer periods of time (4 to 8 hours) can increase your risk of experiencing ozone-related effects.

EPA recommends limiting outdoor activities as ozone levels rise to unhealthy levels. You can limit the

What does exertion have to do with ozone-related health effects?

Exercise and outdoor activities can play an important role in maintaining good health. Physical exertion helps build up strength in the heart and lungs. But exerting yourself outdoors can actually increase your chances of experiencing health effects when ozone concentrations are at unhealthy levels. Why is this true? Think of it this way: Exertion generally causes you to breathe harder and faster. When this happens, more ozone is taken into your lungs, and ozone reaches tissues that are susceptible to injury. Research has shown that respiratory effects are observed at lower ozone concentrations if either the level or duration of exertion is increased. This is why EPA recommends decreasing the level or duration of exertion to avoid ozone health effects.

Examples of typical daily activities that involve **moderate exertion** include climbing stairs, light jogging, easy cycling, playing tennis or baseball, and stacking firewood. Outdoor occupational activities such as simple construction work, pushing a wheelbarrow with a load, using a sledgehammer, or digging in your garden, would also involve moderate exertion. Activities that involve **heavy exertion** include vigorous running or cycling, playing basketball or soccer, chopping wood, and heavy manual labor. Because fitness levels vary widely among individuals, what is moderate exertion for one person may be heavy exertion for another. No matter how fit you are, cutting back on the level or duration of exertion when ozone levels are high will help protect you from ozone's harmful effects.

Health Effects and Protective Actions for Specific Ozone Ranges

Ozone Level	Health Effects and Protective Actions
Good	<p>What are the possible health effects?</p> <ul style="list-style-type: none"> ■ No health effects are expected.
Moderate	<p>What are the possible health effects?</p> <ul style="list-style-type: none"> ■ Unusually sensitive individuals may experience respiratory effects from prolonged exposure to ozone during outdoor exertion. <p>What can I do to protect my health?</p> <ul style="list-style-type: none"> ■ When ozone levels are in the “moderate” range, consider limiting prolonged outdoor exertion if you are unusually sensitive to ozone.
Unhealthy for Sensitive Groups	<p>What are the possible health effects?</p> <ul style="list-style-type: none"> ■ If you are a member of a sensitive group,¹ you may experience respiratory symptoms (such as coughing or pain when taking a deep breath) and reduced lung function, which can cause some breathing discomfort. <p>What can I do to protect my health?</p> <ul style="list-style-type: none"> ■ If you are a member of a sensitive group,¹ limit prolonged outdoor exertion. In general, you can protect your health by reducing how long or how strenuously you exert yourself outdoors and by planning outdoor activities when ozone levels are lower (usually in the early morning or evening). ■ You can check with your State air agency to find out about current or predicted ozone levels in your location. This information on ozone levels is available on the Internet at http://www.epa.gov/airnow.
Unhealthy	<p>What are the possible health effects?</p> <ul style="list-style-type: none"> ■ If you are a member of a sensitive group,¹ you have a higher chance of experiencing respiratory symptoms (such as aggravated cough or pain when taking a deep breath), and reduced lung function, which can cause some breathing difficulty. ■ At this level, anyone could experience respiratory effects. <p>What can I do to protect my health?</p> <ul style="list-style-type: none"> ■ If you are a member of a sensitive group,¹ avoid prolonged outdoor exertion. Everyone else—especially children—should limit prolonged outdoor exertion. ■ Plan outdoor activities when ozone levels are lower (usually in the early morning or evening). ■ You can check with your State air agency to find out about current or predicted ozone levels in your location. This information on ozone levels is available on the Internet at http://www.epa.gov/airnow.
Very Unhealthy	<p>What are the possible health effects?</p> <ul style="list-style-type: none"> ■ Members of sensitive groups¹ will likely experience increasingly severe respiratory symptoms and impaired breathing. ■ Many healthy people in the general population engaged in moderate exertion will experience some kind of effect. According to EPA estimates, approximately: <ul style="list-style-type: none"> ■ Half will experience moderately reduced lung function. ■ One-fifth will experience severely reduced lung function. ■ 10 to 15 percent will experience moderate to severe respiratory symptoms (such as aggravated cough and pain when taking a deep breath). ■ People with asthma or other respiratory conditions will be more severely affected, leading some to increase medication usage and seek medical attention at an emergency room or clinic. <p>What can I do to protect my health?</p> <ul style="list-style-type: none"> ■ If you are a member of a sensitive group,¹ avoid outdoor activity altogether. Everyone else—especially children—should limit outdoor exertion and avoid heavy exertion altogether. ■ Check with your State air agency to find out about current or predicted ozone levels in your location. This information on ozone levels is available on the Internet at http://www.epa.gov/airnow.

¹Members of sensitive groups include children who are active outdoors; adults involved in moderate or strenuous outdoor activities; individuals with respiratory disease, such as asthma; and individuals with unusual susceptibility to ozone.

The best way to protect your health is to find out when ozone levels are elevated in your area and take simple precautions to minimize exposure—even when you don't feel obvious symptoms.

Motor vehicles are a major contributor to smog.

amount of time you are active outdoors or your activity level. For example, if you're involved in an activity that requires heavy exertion, such as running or heavy manual labor (see box on page 6), you can reduce the time you spend on this activity or substitute another activity that requires less exertion (e.g., go for a walk rather than a

You can help reduce ozone levels by walking, biking, carpooling, or using public transportation as an alternative to driving.

jog). In addition, you can plan outdoor activities when ozone levels are lower, usually in the early morning or evening.

What can I do to reduce ozone levels?

Ground-level ozone is created when certain pollutants, known as “ozone precursors,” react in heat and sunlight to form ozone. Cars and other vehicles are the largest source of ozone precursors. Other important sources include industrial facilities, power plants, gasoline-powered mowers, and evaporation of cleaners, paints, and other chemicals.

We can all help reduce ozone levels by taking the following steps:

- Drive less. For example, instead of using a car, you may want to walk, use mass transit, or ride a bike.
- Carpool.
- Make sure your car is well-tuned.
- Take care not to spill gasoline when you fill the tank of your car or lawn or recreation equipment.
- Make sure that you tightly seal the lids of chemical products—such as solvents, garden chemicals, or household cleaners—to keep evaporation to a minimum.

For more ideas about what you can do, visit EPA's web site at <http://www.epa.gov/airnow/consumer.html>.

Airborne particles, the main ingredient of haze, smoke, and airborne dust, present serious air quality problems in many areas of the United States. This particle pollution can occur year-round—and it can cause a number of serious health problems, even at concentrations found in many major cities.

Particles contribute to haze, such as this brown haze over Boston.

What is particle pollution?

Particle pollution is a mixture of microscopic solids and liquid droplets suspended in air. This pollution, also known as particulate matter, is made up of a number of components, including acids (such as nitrates and sulfates), organic chemicals, metals, soil or dust particles, and allergens (such as fragments of pollen or mold spores).

The size of particles is directly linked to their potential for causing health problems. Small particles less than 10 micrometers in diameter pose the greatest problems, because they can get deep into your lungs, and some may even get into your bloodstream. Exposure to such particles can affect both your lungs and your heart. Larger particles are of less concern, although they can irritate your eyes, nose, and throat.

Small particles of concern include “fine particles” (such as those found in smoke and haze), which are 2.5 micrometers in diameter or less; and “coarse particles” (such as those found in wind-blown dust), which have diameters between 2.5 and 10 micrometers.

Are you at risk from particles?

People with heart or lung disease, older adults, and children are considered at greater risk from particles than other people, especially when they are physically active. Exercise and physical activity cause people to breathe faster and more deeply—and to take more particles into their lungs.

People with heart or lung diseases—such as coronary artery disease, congestive heart failure, and asthma or chronic obstructive pulmonary disease (COPD)—are at increased risk, because

particles can aggravate these diseases. People with diabetes also may be at increased risk, possibly because they are more likely to have underlying cardiovascular disease.

Older adults are at increased risk, possibly because they may have undiagnosed heart or lung disease or diabetes. Many studies show that when particle levels are high, older adults are more likely to be hospitalized, and some may die of aggravated heart or lung disease.

Children are likely at increased risk for several reasons. Their lungs are still developing; they spend more time at high activity levels; and they are more likely to have asthma or acute respiratory diseases, which can be aggravated when particle levels are high.

It appears that risk varies throughout a lifetime, generally being higher in early childhood, lower in healthy adolescents and younger adults, and increasing in middle age through old age as the incidence of heart and lung disease and diabetes increases. Factors that increase your risk of heart attack, such as high blood pressure or elevated cholesterol levels, also may increase your risk from particles. In addition, scientists are evaluating new studies that suggest that exposure to high particle levels may also be associated with low birth weight in infants, pre-term deliveries, and possibly fetal and infant deaths.

How can particles affect your health?

Particle exposure can lead to a variety of health effects. For example, numerous studies link particle levels to increased hospital admissions and emergency room visits—and even to death from heart or lung diseases. Both long- and short-term particle exposures have been linked to health problems.

Long-term exposures, such as those experienced by people living for many years in areas with high particle levels, have been associated with problems such as reduced lung function and the development of chronic bronchitis—and even premature death.

Short-term exposures to particles (hours or days) can aggravate lung disease, causing asthma attacks and acute bronchitis, and may also increase susceptibility to respiratory infections. In people with heart disease, short-term exposures have been linked to heart attacks and arrhythmias. Healthy children and adults have not been reported to suffer serious effects from short-term exposures, although they may experience temporary minor irritation when particle levels are elevated.

What are the symptoms of particle exposure?

Even if you are healthy, you may experience temporary symptoms, such as irritation of the eyes, nose, and throat; coughing; phlegm; chest tightness; and shortness of breath.

If you have lung disease, you may not be able to breathe as deeply or as vigorously as normal, and you may experience coughing, chest discomfort, wheezing, shortness of breath, and unusual fatigue. If you have any of these symptoms, reduce your exposure to particles and follow your doctor’s advice. Contact your doctor if symptoms

persist or worsen. **If you have asthma**, carefully follow your asthma management plan when particle levels are high. Your doctor can help you develop a plan if you don’t have one.

If you have heart disease, particle exposure can cause serious problems in a short period of time—even heart attacks—with no warning signs. So don’t assume that you are safe just because you don’t have symptoms. Symptoms such as chest pain or tightness, palpitations, shortness of breath, or unusual fatigue may indicate a serious problem. If you have any of these symptoms, *follow your doctor’s advice*.

How can you avoid unhealthy exposure?

Your chances of being affected by particles increase the more strenuous your activity and the longer you are active outdoors. If your activity involves prolonged or heavy exertion, reduce your activity time—or substitute another that involves less exertion. Go for a walk instead of a jog, for example. Plan outdoor activities for days when particle levels are lower. And don’t exercise near busy roads; particle levels generally are higher in these areas.

Particle Pollution and Your Health

Particle levels can be elevated indoors, especially when outdoor particle levels are high. Certain filters and room air cleaners can help reduce indoor particle levels. You also can reduce particle levels indoors by not smoking inside, and by reducing your use of other particle sources such as candles, wood-burning stoves, and fireplaces.

How can the Air Quality Index help?

In many areas, local media provide air quality forecasts telling you when particle levels are expected to be unhealthy. Forecasts use the same format as EPA's Air Quality Index, or AQI, a tool that state and local agencies use to issue public reports of actual levels of particles, ground-level ozone, and other common air pollutants.

Using the AQI's color-coded scale, these forecasts help you quickly learn when air pollution is expected to reach unhealthy levels in your area. In the newspaper forecast below, for example, the black arrow points to the "orange" range, indicating that particle levels are expected to be unhealthy for sensitive groups. On television, you might hear a meteorologist say something like this: "Tomorrow will be a code orange air quality day, with particle pollution at levels that are unhealthy for sensitive groups. If you have heart or lung disease, or if you're an older adult or a child, you should plan strenuous activities for a time when air quality is better."

Daily air quality and health information are available on the AIRNOW Web site.

AIRNOW

AIRNOW (www.epa.gov/airnow) is a Web site that gives daily information about air quality, including ground-level ozone and particles, and how they may affect you. AIRNOW contains:

- Real-time particle levels for many locations.
- Air quality forecasts for many cities across the country.
- Kids' Web page and associated teacher curriculum.
- Smoke Web page.
- Links to state and local air quality programs.
- Ideas about what you can do to reduce particles. For example, you can keep your car, boat, and other engines well-tuned, and avoid using engines that smoke. You can also participate in local energy conservation programs.

Airport Search

1. Tell us about a nearby place

Indicating one of the choices below is enough

A city, town, or zip code:
 Example: **Boston** or **Green Bay, WI** or **90210**

An airport identifier:

Geographic coordinates: Latitude:
 Longitude:
 Example: **43** or **43-12-19** or **43.20528**

2. Tell us about the airfields you are looking for

Suitable types of fields:
 (Check at least one)

-  Airports
-  Balloonports
-  Gliderports
-  Heliports
-  Seaplane bases
-  Ultralight Flightparks

Airfield use
 (Check at least one)

- Public
- Private
- Military

Instrument approaches

Do you need instrument approaches?

Runway characteristics:

Enter, or leave blank if you don't care

Length: at least ft.

Paved? (check if runway must be paved)

Fuel types:

-
-
-
-
-
-

Shift, control or command to select multiple

Only where fuel prices known

3. Where do you want to search?

Between and statute miles

DNL Calculator

The Day/Night Noise Level Calculator is an electronic assessment tool that calculates the Day/Night Noise Level (DNL) from roadway and railway traffic. For more information on using the DNL calculator, view the [Day/Night Noise Level Calculator Electronic Assessment Tool Overview \(/programs/environmental-review/daynight-noise-level-electronic-assessment-tool/\)](#).

Guidelines

- To display the Road and/or Rail DNL calculator(s), click on the "Add Road Source" and/or "Add Rail Source" button(s) below.
- All Road and Rail input values must be positive non-decimal numbers.
- All Road and/or Rail DNL value(s) must be calculated separately before calculating the Site DNL.
- All checkboxes that apply must be checked for vehicles and trains in the tables' headers.
- **Note #1:** Tooltips, containing field specific information, have been added in this tool and may be accessed by hovering over all the respective data fields (site identification, roadway and railway assessment, DNL calculation results, roadway and railway input variables) with the mouse.
- **Note #2:** DNL Calculator assumes roadway data is always entered.

Mitigation Options

If your site DNL is in Excess of 65 decibels, your options are:

- **No Action Alternative:** Cancel the project at this location
- **Other Reasonable Alternatives:** Choose an alternate site
- **Mitigation**
 - Contact your Field or Regional Environmental Officer (</programs/environmental-review/hud-environmental-staff-contacts/>)
 - Increase mitigation in the building walls (only effective if no outdoor, noise sensitive areas)
 - Reconfigure the site plan to increase the distance between the noise source and noise-sensitive uses
 - Incorporate natural or man-made barriers. See *The Noise Guidebook* (</resource/313/hud-noise-guidebook/>)
 - Construct noise barrier. See the **Barrier Performance Module** (</programs/environmental-review/bpm-calculator/>)

Mitigation Options

If your site DNL is in Excess of 65 decibels, your options are:

- **No Action Alternative:** Cancel the project at this location
- **Other Reasonable Alternatives:** Choose an alternate site
- **Mitigation**
 - Contact your **Field or Regional Environmental Officer** (</programs/environmental-review/hud-environmental-staff-contacts/>)
 - Increase mitigation in the building walls (only effective if no outdoor, noise sensitive areas)
 - Reconfigure the site plan to increase the distance between the noise source and noise-sensitive uses
 - Incorporate natural or man-made barriers. See *The Noise Guidebook* (</resource/313/hud-noise-guidebook/>)
 - Construct noise barrier. See the **Barrier Performance Module** (</programs/environmental-review/bpm-calculator/>)

[Home \(/\)](#) > [Programs \(/programs/\)](#) > [Environmental Review \(/programs/environmental-review/\)](#) > DNL Calculator

DNL Calculator

The Day/Night Noise Level Calculator is an electronic assessment tool that calculates the Day/Night Noise Level (DNL) from roadway and railway traffic. For more information on using the DNL calculator, view the [Day/Night Noise Level Calculator Electronic Assessment Tool Overview \(/programs/environmental-review/daynight-noise-level-electronic-assessment-tool/\)](#).

Guidelines

- To display the Road and/or Rail DNL calculator(s), click on the "Add Road Source" and/or "Add Rail Source" button(s) below.
- All Road and Rail input values must be positive non-decimal numbers.
- All Road and/or Rail DNL value(s) must be calculated separately before calculating the Site DNL.
- All checkboxes that apply must be checked for vehicles and trains in the tables' headers.
- **Note #1:** Tooltips, containing field specific information, have been added in this tool and may be accessed by hovering over all the respective data fields (site identification, roadway and railway assessment, DNL calculation results, roadway and railway input variables) with the mouse.
- **Note #2:** DNL Calculator assumes roadway data is always entered.

Barrier Performance Module

This module provides to the user a measure on the barrier's effectiveness on noise reduction. A list of the input/output variables and their definitions, as well as illustrations of different scenarios are provided.

Calculator

[View Day/Night Noise Level Calculator \(/programs/environmental-review/dnl-calculator/\)](/programs/environmental-review/dnl-calculator/)

[View Descriptions of the Input/Output variables.](#)

Note: Tool tips, containing field specific information, have been added in this tool and may be accessed by hovering over the Input and Output variables with the mouse.

WARNING: If there is direct line-of-sight between the Source and the Observer, the module will report erroneous attenuation. "Direct line-of-sight" means if the 5' tall Observer can see the noise Source (cars, trucks, trains, etc.) over the Barrier (wall, hill/excavation, building, etc.), the current version of Barrier Performance Module will not accurately calculate the attenuation provided. In this instance, there is unlikely to be any appreciable attenuation.

Note: Barrier height must block the line of sight

Combined Road/Rail DNL with Barrier Reduction:

Input/Output Variables

Input Variables

The following variables and definitions from the barrier being assessed are the input required for the web-based barrier performance module:

- H = Barrier Height
- S = Noise Source Height
- O = Observer Height (known as the receiver)
- R^1 = Distance from Noise Source to Barrier
- D^1 = Distance from the Observer to the Barrier
- α = Line of sight angle between the Observer and the Noise Source, subtended by the barrier at observer's location

Output Variables

Definitions of the output variables from the mitigation module of the Day/Night Noise Level Assessment Tools as part of the Assessment Tools for Environmental Compliance:

- h = The shortest distance from the barrier top to the line of sight from the Noise source to

the Observer.

- R = Slant distance along the line of sight from the Barrier to the Noise Source
- D = Slant distance along the line of sight from the Barrier to the Observer

The “actual barrier performance for barriers of finite length” is noted on the worksheets(in the Guidebook) as **FS**.

Combined Road/Rail DNL with Barrier Reduction:

Input/Output Variables

Input Variables

The following variables and definitions from the barrier being assessed are the input required for the web-based barrier performance module:

- H = Barrier Height
- S = Noise Source Height
- O = Observer Height (known as the receiver)
- R^1 = Distance from Noise Source to Barrier
- D^1 = Distance from the Observer to the Barrier
- α = Line of sight angle between the Observer and the Noise Source, subtended by the barrier at observer's location

Output Variables

Definitions of the output variables from the mitigation module of the Day/Night Noise Level Assessment Tools as part of the Assessment Tools for Environmental Compliance:

- h = The shortest distance from the barrier top to the line of sight from the Noise source to

the Observer.

- R = Slant distance along the line of sight from the Barrier to the Noise Source
- D = Slant distance along the line of sight from the Barrier to the Observer

The “actual barrier performance for barriers of finite length” is noted on the worksheets(in the Guidebook) as **FS**.

Barrier Implementation Scenarios

Locate the cursor on the following thumbnails to enlarge the respective scenario as implementation examples of the barrier performance module.

Barrier Performance Module

This module provides to the user a measure on the barrier's effectiveness on noise reduction. A list of the input/output variables and their definitions, as well as illustrations of different scenarios are provided.

Calculator

[View Day/Night Noise Level Calculator \(/programs/environmental-review/dnl-calculator/\)](/programs/environmental-review/dnl-calculator/)

[View Descriptions of the Input/Output variables.](#)

Note: Tool tips, containing field specific information, have been added in this tool and may be accessed by hovering over the Input and Output variables with the mouse.

WARNING: If there is direct line-of-sight between the Source and the Observer, the module will report erroneous attenuation. "Direct line-of-sight" means if the 5' tall Observer can see the noise Source (cars, trucks, trains, etc.) over the Barrier (wall, hill/excavation, building, etc.), the current version of Barrier Performance Module will not accurately calculate the attenuation provided. In this instance, there is unlikely to be any appreciable attenuation.

Note: Barrier height must block the line of sight

]Based on the identified noise levels at the project site, noise attenuation will be required by the project building materials. Have the Project Architect complete Part II, Items 1a through 1g, and the “prepared by” sections of the form provided below, as highlighted. CMT will complete Item 1h. There is no need to complete Items 2 or 3 of Part II.

Figure 19
Description of Noise Attenuation Measures
(Acoustical Construction)

Part I

Project Name Nelson Park Apartments
Location 1994 Maryland Avenue, Columbus, Franklin County Ohio
Sponsor/Developer Renewal Development Associates, LLC
Noise Level (from NAG) 74 Attenuation Required 29
Primary Noise Source(s) I-670, Norfolk Southern Railroad, and Columbus and Ohio River Railroad

Part II

1. For Wall(s) facing and parallel to the noise source(s) (or closest to parallel):

a. Description of wall construction* 4" Face brick one course; 1" Air space; 1/2 Gyp sheathing; 2x4 wood Studs 16" O.C.; 3 1/2" Fiberglass insulation; 1/2" Gypsum Board

b. STC rating for wall (rated for no windows or doors) 56

c. Description of windows Single Hung Aluminum Windows: Energy Basic (Dual Silver), Argon Filled Glass

d. STC rating for window type 28

e. Description of doors 3'x7' Steel-faced rigid polyurethane core door 1 3/4" thick

f. STC rating for doors 26

g. Percentage of wall (per wall, per dwelling unit) composed of:

Windows 11.79% And doors 6.43%

h. Combined STC rating for wall component 54

2. For walls perpendicular to noise source(s):

a. Description of wall construction* _____

b. STC rating for wall (rated for no windows or doors) _____

c. Description of windows _____

d. STC rating for window type _____

e. Description of doors _____

f. STC rating for doors _____

g. Percentage of wall (per wall, per dwelling unit) composed of:

Windows _____ And doors _____

h. Combined STC rating for wall component _____

3. Roofing component (if overhead attenuation is required due to aircraft noise):

a. Description of roof construction: _____

b. STC rating (rated as if no skylights or other openings) _____

c. Description of skylights or overhead windows _____

d. STC rating for skylights or overhead windows _____

e. Percentage of roof composed of skylights or windows (per dwelling unit) _____

f. Percentage of roof composed of large uncapped openings such as chimneys _____

g. Combined STC rating for roof component _____

4. Description of type of mechanical ventilation provided _____

Prepared by _____ John Boyce _____

Print name and company: _____ John Boyce - Berardi Partners _____

Date: _____ 12/12/2023 _____

*If walls contain vents or similar openings, attach a description of duct arrangement and insulation and a statement of how much the wall STC is reduced by the presence of the vent.

Case 1: Nelson Park Apartments

STC' = 29 (Use Required Attenuation = noise level - 45)

	% Area of Total Wall	STC Rating	C2=10 log(%/100)	C1=STC'-STC+C2	% Energy = 100 10^(c1/10)
Wall	81.78	56	-0.873528938	-27.87352894	0.163172552
Window	11.79	28	-9.284861949	-8.284861949	14.84273061
Door	6.43	26	-11.91789027	-8.917890271	12.82953669
				% sum of energy=	27.83543984
				C'=10 log(%/100)	-5.554019118
			ACTUAL STC = STC' - C'		34.55401912

Subject: RE: ENV records request - 1994 Maryland Avenue, Columbus, OH 43219

Hello Joslyn:

Files at the Columbus Public Health Environmental Health Division were searched for the following records: hazardous materials complaints, licenses/permits associated under our authority, and any general outstanding environmental complaints or balances for the following location(s):

Address(es): **1994 Maryland Avenue, Columbus, OH 43219**

Results: **No results were found for this address.**

No other results were found for this address.

Regarding your question as to how long records are maintained by the health department, that timeframe varies.

If more information is needed regarding any of the above information, please respond to this email with your specific request.

NOTICE:

- The City of Columbus **311 Service Center** maintains **311 Service Request records** and may have **information on properties of interest that are not maintained in the environmental health records**. They can be contacted at 311@columbus.gov.
- **Not all information regarding SARA Title III facilities may be available**, contact the Chemical Emergency Preparedness Advisory Council (CEPAC) for more: <https://www.columbus.gov/cepac/> or email request to JESchmidt@columbus.gov.
- The Columbus **Building and Zoning Services Department** maintains **information not related to the environmental health records**; they can be contacted at recordscenter@columbus.gov.
- The **Ohio Environmental Protection Agency (OEPA)** maintains **information not related to the environmental health records** maintained by our department; information about public records request, file reviews, and eDocument search can be found on their website: <https://www.epa.ohio.gov/dir/publicrecords>.

Thank you and let us know if you need any further details.

Subject: [EXTERNAL] Health Department Records Request

Dear Sir Or Madam:

BV is an engineering firm currently conducting an Environmental Site Assessment of the following property on behalf of the property owner:

Nelson Park Apartments
1994 Maryland Avenue
Columbus, Ohio 43219

As part of this process, we are submitting this request for information specific to the property. Please provide us with the following information concerning the property:

- 1) **How far back are records maintained by the Health Department?**
- 2) **Are there any records of underground or aboveground storage tanks?**
- 3) **Are there any records of wells or septic systems?**
- 4) **Are there any records of spills or releases of petroleum products and/or hazardous materials?**

Please provide follow up documentation for any Yes responses to these questions. Responses may be emailed to rfi@bureauveritas.com or faxed to 410.785.6220. If you need additional information to complete this request or the cost to complete this request will exceed \$25, please contact me. Thank you for your prompt attention to this matter.

OHIO - EPA Map of Radon Zones

<http://www.epa.gov/radon/zonemap.html>

The purpose of this map is to assist National, State and local organizations to target their resources and to implement radon-resistant building codes.

This map is not intended to determine if a home in a given zone should be tested for radon. Homes with elevated levels of radon have been found in all three zones.

All homes should be tested, regardless of zone designation.

IMPORTANT: Consult the publication entitled "Preliminary Geologic Radon Potential Assessment of Ohio" (USGS Open-file Report 93-292-E) before using this map. <http://energy.cr.usgs.gov/radon/grpinfo.html> This document contains information on radon potential variations within counties. EPA also recommends that this map be supplemented with any available local data in order to further understand and predict the radon potential of a specific area.

DEPARTMENT OF
PUBLIC UTILITIES

Private Property Information

Buildings in Ohio built prior to 1998 or that use plumbing material or solder manufactured before 1998 may have materials with greater than 8% lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead to the drinking water. It should be noted however that, although prohibited, some use of leaded solder or leaded components may have occurred after the prohibitions became effective.

For additional information and an interactive web map go to:

THE CLIENT SHALL NOT REUSE OR MAKE OR PERMIT TO BE MADE ANY MODIFICATION TO THE DRAWINGS AND SPECIFICATIONS WITHOUT THE PRIOR WRITTEN AUTHORIZATION OF THE CONSULTANT (ARCHITECT). THE CLIENT AGREES TO WAIVE ANY CLAIM AGAINST THE CONSULTANT (ARCHITECT) ARISING FROM ANY UNAUTHORIZED TRANSFER, REUSE OR MODIFICATION OF THE DRAWINGS AND SPECIFICATIONS.
 5. ARCHITECT CANNOT WARRANT THE ACCURACY OF DATA CONTAINED HEREIN. ANY USE OR REUSE OF ORIGINAL OR ALTERED CAD DESIGN MATERIALS BY THE USER OR OTHER PARTIES WITHOUT THE REVIEW AND WRITTEN APPROVAL OF THE ARCHITECT SHALL BE AT THE SOLE RISK OF THE USER. FURTHERMORE, USER AGREES TO DEFEND, INDEMNIFY, AND HOLD ARCHITECT HARMLESS FROM ALL CLAIMS, INJURIES, DAMAGES, LOSSES, EXPENSES, AND ATTORNEY'S FEES ARISING OUT OF THE MODIFICATION OR REUSE OF THESE MATERIALS.
 6. THESE DRAWINGS ARE PART OF THE CONTRACT DOCUMENTS AND ARE DIAGRAMMATIC AND ARE NOT INTENDED TO DEFINE EXACT QUANTITIES, LOCATIONS OR CODED REQUIREMENTS. THE DRAWINGS SHALL NOT BE SCALED. EXACT STATE AND LOCAL CODE REQUIREMENTS AND OTHER APPLICABLE CODE REQUIREMENTS SHALL BE OBTAINED BY AND ARE THE SOLE RESPONSIBILITY OF THE CONTRACTOR. ANY INFORMATION WHICH DIRECTLY CONFLICTS WITH ANY OF THESE CODES OR ANY DISCREPANCIES FOUND IN THE CONTRACT DOCUMENTS SHALL BE BROUGHT TO THE ATTENTION OF THE PROJECT ARCHITECT.

Mixed penetrants	1	F-C-8026	Mixed penetrants	4	W-L-8069

See Division 7 specifications for other approved manufacturers.
UL's Online Certifications Directory: www.ul.com/database

Notes:

- Jobsite conditions of each through-penetration firestop system must meet all details of the UL-Classified System selected.
- If jobsite conditions do not match any UL-classified systems in the schedules above, contact one of the approved manufacturers for alternative systems or engineer judgment drawings.
- Where more than one applicable UL-Classified System is listed in the schedules, choose the UL System which is most economical for each through-penetration firestop system.
- Coordinate work with other trades to assure that penetration opening sizes are appropriate for penetrant locations, and vice versa.
- For 3-hour rated gypsum walls, contact one of the approved manufacturers for a UL-classified system or engineer judgment drawing.

Abbreviations

AFF	Above finished floor	FT	Feet	PRESS	Pressure
AFR	Above finished roof	FTHD	Feet of head	PRP	Propeller

Plumbing General Notes

- Permits: Provide work in accordance with current version of applicable national, state, and local codes as determined by the Authorities Having Jurisdiction (AHJs). Applicable codes shall include ANSI A117.1 (latest edition), UFAS (Uniform Federal Accessibility Standards), FHAG (Fair Housing Accessibility Guidelines), and all other local/state accessibility codes and interpretations. Contractor shall be responsible for obtaining and paying for all permits and inspections. Contractor shall be familiar with local AHJ interpretations before the bid and construction. All costs resulting from code interpretation shall be borne by the contractor.
- Definitions: "Furnish" means to purchase, arrange for delivery to site, and to take delivery at the site. "Install" means to place in position for use. "Provide" means to furnish and install. "HC" means handicap accessible per current ADA, UFAS and ANSI Type A requirements. "SI" means sensory impaired per ADA, UFAS and ANSI requirements. "Typical" means that the referenced note shall apply to the entire project unless otherwise noted.
- Contract Documents: All work shall be performed according to the Contract Documents. The Contract Documents include Architectural, Civil, Structural, Fire Protection, Plumbing, Mechanical, and Electrical design drawings, Specifications, and Addenda, Architect's Supplemental Instructions, Bulletins, Change Orders, and other instructions transmitted to modify the original documents. All of these documents are integral to the project. Refer to the specifications for general requirements, for product quality, construction and finish, and for additional installation instructions. Refer to the architectural drawings for accessibility compliance requirements. Before bidding, review and understand the requirements of the Contract Documents. During bidding, confirm contract document and code compliance requirements with the Engineer and General Contractor, and again during the Pre-Construction Conference prior to performing the work. Conflicts within or between the Contract Documents and referenced codes shall use the most stringent interpretation until clarified. Clarifications shall be requested in writing and shall be resolved prior to proceeding with installation. Scope changes shall be approved by the Owner, Architect, Engineer, and the General Contractor, prior to proceeding with installation. All costs due to performing work prior to conflict resolution shall be borne by the contractor.
- Coordination: The drawings are diagrammatic, schematic and shown for bidding and general reference. Drawings are not intended to define exact installation details and shall not be scaled. Prior to bid, confirm scope of work with Engineer. Before ordering equipment or supplies, coordinate scope requirements with suppliers and submit product data to Engineer for review. Prior to construction, verify existing conditions and attend truss coordination/pre-installation conference. Coordinate exact dimensions and sequencing with all other trades including but not limited to site, utilities, and framing with subcontractor truss layout. All additional costs resulting from lack of coordination shall be borne by the contractor.
- Penetrations: Penetrations through structure shall be coordinated with structural elements, including studs, joists and trusses, before structure construction is started. Penetrations through fire/smoke rated construction shall be protected with a product listed and labeled to maintain the fire/smoke rating of system penetration. Penetrations through walls, slabs, masonry, etc. shall do so through sleeves. All gaps outside and inside of the sleeves shall be caulked or be tightly packed in order to maintain proper protection against fire, smoke, heat loss, moisture, air infiltration, sound transmission, etc.
- Contractor Deviations: Deviations from the design shall be approved by the Architect and Engineer before ordering supplies or starting work. Alternate products and/or system layouts must be approved in writing prior to bid in order to be accepted. If submitted products are not specified, they are substitutions and shall be submitted for consideration under substitution procedures. Contractor shall be responsible for design and performance of any substitutions, even if accepted by owner and added to construction documents. All costs associated with dimensional, performance, or other deviations from basis of design, including but not limited to, engineering, permitting, and other affected trades, shall be borne by the contractor.
- Incidents: Provide materials, labor, and incidental work (including protection of existing, surface preparation, hangars, provisions for testing, and other opportunities) to provide complete working plumbing systems for the project. Offsets, accessories, final connections, and other miscellaneous hardware are not shown, but shall be included at no additional cost where required to complete the system. Major deviations from the design shall be approved by the Architect and Engineer before ordering supplies or starting work.
- Piping: Conceal piping whenever possible. Install equipment (and piping) for easy equipment disconnection and replacement, to facilitate service, maintenance, repair, and replacement of components, and to eliminate interference with other installations. Dashed areas shown in front of, and around equipment are areas required for maintenance and inspection. These areas shall be maintained clear of obstructions to 7'-0" A.F.F., or to the height of the equipment (whichever is larger). Piping shall not run over any electric panel or equipment. Trapeze hangers may be used when grouping pipes. Transitions between dissimilar materials shall be accomplished via manufacturer approved transition fittings. Transitions between plastic and metal piping shall not be made through direct threaded connections.
- Underground Pipe: Water service pipe and building sewer shall be separated prevent cross contamination. Minimum parallel distance from a wall to the centerline of an underground pipe shall be 3'-0" for repair access. Piping shall not be installed directly under walls. Provide tracer wire for pipes outside of the building.
- Sanitary System: Provide cleanouts in all sanitary piping according to the latest plumbing codes. Fixture traps shall be 20 gauge metal and if exposed shall be completely wrapped with an ADA code compliant insulating assembly. Provide floor drain trap primers for all floor drains.
- Domestic Water: Verify local utility requirements and install meter according to utility installation requirements. Unless noted otherwise, install a shut off valve in the main immediately after entering the building. The contractor shall provide tap unless performed by the water utility and pay any fees associated with the tap. Provide shock arrestors at the end of every main (1.5" and larger) according to manufacturer recommendations. Provide manual air vents at high points and manual drains at low points of all water piping. For hot and cold domestic supply piping connection(s) at new fixture(s), provide angle stop valve with removable key and escutcheon washer if exposed, or easily accessible shut-off valve in the immediate vicinity of the fixture. Install exterior wall hydrants approximately 20" above grade. All domestic hot water supply piping shall be insulated with a minimum of R-3. Domestic cold water supply to be insulated where located in areas with high ambient temperatures and condensation is likely to occur. All supply piping shall be run in conditioned ceilings, walls on the interior side of insulation, and floors and shall not be run in unconditioned attic spaces.
- Domestic Water Heaters: Provide temperature and pressure relief valves at water heaters, and pipe full size to indirect outlet at nearest floor drain. Provide unions and shut off valves at all connections to water heaters and provide an expansion tank for each DHW system.
- Natural Gas/Propane: Verify local utility and code requirements, then provide service equipment, piping, and damage protection accordingly. Submit application(s) with all information and fees necessary to obtain permit and service. Provide internally vented regulators if possible, or if required, extend regulator vents to approved exterior locations. Provide a shut off valve in the main immediately before entering the building (unless noted otherwise), and provide gas valve, union and dirt leg at each gas connection to equipment. Coordinate gas connection size and location with equipment requirements. Gas supply to generators shall conform to NFPA 110 7.9.7: The generator supply shall tee off of the gas supply prior to the building main shutoff. Coordinate with utility and AHJ.
- Condensate Drains: Trap for condensate drain shall be 1" deeper than the total possible static pressure that the air handling unit can develop. Trap outlet shall be lower than inlet by 1" more than total unit static pressure. All condensate drains draining to sanitary system shall be provided with an air gap.
- Washing Machines not in Dwelling Units: All washing machines not installed in dwelling units shall be equipped with an interceptor with a wire basket, removable for cleaning, that prevents passage into the sanitary system of solids 0.5" or larger in size.
- Piping in exterior walls shall be run on the interior side of building insulation within the building's thermal envelope. Provide metal jacket up 8'-0" A.F.F. on all exposed insulated piping.
- Ice Maker: Provide ice maker box and 0.5" DCW supply where refrigerator with ice maker is located. See appliance specifications for more information.
- Ceiling Access Panels: Provide one 24" x 24" ceiling access panel for each valve (including but not limited to balance and control valves). Coordinate access panel locations and show recommended locations on coordination drawings along with valves, structure, lights, and ceiling air devices.
- Materials exposed within plenums shall be noncombustible or have a flame spread index of 25 or less and a smoke-developed index of 50 or less.

Environmental Justice & Supplemental Indexes

The environmental justice and supplemental indexes are a combination of environmental and socioeconomic information. There are thirteen EJ indexes and supplemental indexes in EJScreen reflecting the 13 environmental indicators. The indexes for a selected area are compared to those for all other locations in the state or nation. For more information and calculation details on the EJ and supplemental indexes, please visit the [EJScreen website](#).

EJ INDEXES

The EJ indexes help users screen for potential EJ concerns. To do this, the EJ index combines data on low income and people of color populations with a single environmental indicator.

EJ INDEXES FOR THE SELECTED LOCATION

SUPPLEMENTAL INDEXES

The supplemental indexes offer a different perspective on community-level vulnerability. They combine data on percent low-income, percent linguistically isolated, percent less than high school education, percent unemployed, and low life expectancy with a single environmental indicator.

SUPPLEMENTAL INDEXES FOR THE SELECTED LOCATION

These percentiles provide perspective on how the selected block group or buffer area compares to the entire state or nation.

*Diesel particulate matter, air toxics cancer risk, and air toxics respiratory hazard index are from the EPA's Air Toxics Data Update, which is the Agency's ongoing, comprehensive evaluation of air toxics in the United States. This effort aims to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that the air toxics data presented here provide broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. Cancer risks and hazard indices from the Air Toxics Data Update are reported to one significant figure and any additional significant figures here are due to rounding. More information on the Air Toxics Data Update can be found at <https://www.epa.gov/haps/air-toxics-data-update>.

Footnotes

Report for 1 mile Ring around the Area

Nelson Park Apartments
Statement of Community Outreach

To date, the following community outreach activities have occurred on behalf of the Nelson Park Apartments Redevelopment Plan proposal:

Near East Area Commission Planning Committee Presentation – February 17, 2022

Kelan Craig, Vice President of Development at Renewal Housing Associates, LLC, and Jonathan Leonard, Architect, Berardi and Partners, Inc., presented to the NEAC Planning Committee on February 17, 2022. The notes from that committee meeting are enclosed. The Nelson Park Redevelopment Plan was approved by the Planning Committee during the meeting.

Meeting with Eastgate Neighborhood Association - February 22, 2022

The Orlean Company, ABC Management and Renewal Housing Associates, LLC, met with the Eastgate Neighborhood Association to discuss the redevelopment plan on February 22, 2022. The meeting was also attended by staff from the National Center for Urban Solutions (NCUS) that have been working with Nelson Park residents as part of a local workforce development program.

Near East Area Commission Full Commission Presentation – March 10, 2022

Kelan Craig, Vice President of Development at Renewal Housing Associates, LLC, and Jonathan Leonard, Architect, Berardi and Partners, Inc., presented to the full NEAC Commission on March 10, 2022. The meeting agenda and notes from the full commission meeting are enclosed. The Nelson Park Redevelopment Plan was approved by the full commission during the meeting.

City of Columbus Preliminary Site Engineer Meeting – March 30, 2022

The following members of the development team attended and presented to various City of Columbus Departments at the Preliminary Site Engineering Meeting held by the City of Columbus on March 30, 2022:

- Kelan Craig, Vice President of Development, Renewal Housing Associates, LLC.
- George Berardi, Owner/Architect, Berardi and Partners, Inc.
- Steve Ciuni and Benjamin Howe, General Contractors, Drake Construction, Inc.

City of Columbus Department of Development Meetings

Members of the development team held meeting(s) with Deputy Director of Development, Hannah Jones; Rita Parise, Housing Administrator; and/or Krystal Dunlap, Rental Rehabilitation Program Manager; to discuss the Nelson Park Apartments redevelopment plan, occurred on September 10, 2021; November 5, 2021; December 12, 2021; June 16, 2022; etc.

In addition to the community outreach activities noted above that have occurred to date, a copy of our Community Outreach Plan is enclosed below.

Nelson Park Apartments Community Outreach Plan

Purpose

Following Nelson Park Apartments success in receiving a conditional award of Housing Tax Credits and gap financing in the 2022 OHFA Bond Gap Financing Program (BGF) round, the development team plans to engage in the community outreach activities outlined in this plan. The goal of the community outreach plan is to inform community stakeholders about the Nelson Park redevelopment plan and timeline. These stakeholders include tenants at Nelson Park Apartments, neighboring residents, local government officials and others. The plan to advise the community of our proposed rehabilitation project and solicit feedback is below.

Project and Community Landscape

Nelson Park Apartments is a currently a 177-unit HUD Section 8 property with 1-, 2-, 3-, and 4-bedroom townhome apartments serving both families and seniors in the Eastgate neighborhood of Columbus on the near east side. As part of the proposed projects, the number of units will be reduced to 140 units with a similar mix of bedroom sizes.

The property was originally constructed in 1955 and has not undergone a significant recapitalization or renovation since 1980. Nelson Park has periodically drawn negative attention from the Columbus City Attorney's Office and the property is a high priority of the City for redevelopment due to the safety and security issues at the Property. Despite these historical challenges, the property is desperately needed in the City of Columbus, a municipality with growing demand for affordable housing. Therefore, it is critical to preserve this critically important affordable housing asset in the City of Columbus. The development team believes that community stakeholders will be supportive of our renovation plan and be encouraged by our mission to provide safe and well-maintained affordable housing. This community outreach plan was tailored to reach the relevant stakeholders and facilitate constructive conversations with them throughout the planning process and during the development process moving forward.

Strategies

Nelson Park Apartments residents, local officials and neighbors will be apprised of the redevelopment plan and have an opportunity to provide input on the proposed project. The community outreach plan consists of the following four key components:

1. List of Stakeholders To Be Notified
2. Stakeholders Notification Method
3. Copies of all Materials
4. Description of Stakeholder Feedback & Developer Response

1. List of Stakeholders To Be Notified

The first component of the community outreach plan is to understand the local landscape and identify the area officials that best represent local interests. This group consists of local government officials, public safety departments and community groups, as well as those most impacted by the proposed redevelopment, the Nelson Park residents themselves. Below are the stakeholders who were or will be notified.

- **Local Government Officials:**
 - Mayor Andrew Ginther
 - Director of Development Michael Stevens
 - Columbus City Council Members (via clerk)
 - State Senator Hearcel Craig (D-15)
 - State Representative Dontavius Jarrells (D-25)

- **Safety Officials:**
 - Chief of Police Elaine Bryant
 - Fire Chief Jeffrey Happ

- **Community Groups/Neighborhood Associations:**
 - Near East Area Commission
 - Eastgate Neighborhood Association

2. Stakeholders Notification Method

Direct mail notifications will be sent to local government officials, police, and fire departments with proof of mailings. A resident meeting will be scheduled to detail the proposed renovation plans and what tenants can expect moving forward. Additional meetings and stakeholder engagement with these and other stakeholders may occur separate and apart from the statutorily required public notification requirements outlined in OHFA's Qualified Allocation Plan (QAP).

3. Copies of all Materials

Copies of the notification letters and proof of mailings to all community stakeholders will be provided to OHFA. A copy of the resident meeting invitation letter and meeting agenda will also be enclosed, if available, at the time of submission.

4. Description of Stakeholder Feedback & Developer Response

If stakeholder feedback is received, such feedback will be enclosed with the plan. Given the high profile of this property, and the prospect of performing a substantial rehabilitation of an existing affordable housing property, we anticipate receiving feedback from stakeholders, which will be shared with OHFA.

Near East Area Commission

March 2022 General Business Meeting Minutes

Thursday, March 10, 2022

Near East Pride Center– 1393 East Broad Street, Columbus, Ohio 43203

6:30 PM

- A. Call to Order & Prayer - 6:35 Hutchison, Russell, approved 13, 0, 0
- B. Roll Call, Commissioners and Community Representatives.
 - a. Present - Berry, Blevins, Boykin, Curry-Da-Souza, Dolan, Duckett, Goldsmith, Hutchison, Lowenstein, Owens, Recchie, Ross-Womack, Russell (departed 8:20)
 - b. Absent - Musa, Zellers
- C. Minutes – February Meeting provide minutes for the next meeting
- D. Standing Committee Report
 - a. Planning – Commissioner Boykin
 - i. Future Agenda Item(s) – Meeting, March 17, 2022
 - 1. TBA
 - ii. Committee Report
 - 1. Nelson Park apartment’s renovation. 177 units of family and senior housing; modernize the property, etc. Site plan to reduce overall density, etc. New community center for adults and children; reduce high vacancy rate; create a new identity for the site – more family friendly site. Committee comments: Security for the property: curb cuts, enhance security cameras, remove trees, effort to engage off-duty police, site lighting, traffic flow (curb cuts) – engage with Eastgate civic association. Motion approved unanimously.
 - a. 30 % AMI
 - b. Buildings demolished including community center
 - c. New community center
 - d. ADA units
 - e. Eastgate meetings – curb cut to Nelson not eliminated, discuss with city traffic
 - f. Some new ownership partnered with old owners
 - g. Improve traffic patterns eliminating 5 curb cuts
 - h. Improve security
 - i. Convert townhome units to ADA
 - j. Improved lighting
 - k. Increase unit sizes and reduce 48 units down to 45.
 - l. Woodland – sound barrier wall

m. Goldsmith, Dolan, Approved 12, 1, 0 stipulation to have traffic study and eliminate Nelson curb cut

2. 1140 Oak Street. 2 – Story building with 8 units; increasing space/leased apartments. Motion fails for lack of a majority vote.
3. 980 -982 East Fulton. Single family, 2-story, land bank property. Motion passes with a majority plus.
4. 245 North Monroe (Brian and Shaun Knoppe); 2500 SF with basement/4 lots; houses 10 feet apart, detached garages, 2 bdrs, for sale. Motion passes with a majority plus vote.
5. 163 North 22nd Street (Mr. Levi). Single family to build with carriage house; hardy board materials. Approval vote unanimous.
6. 986 East Fulton (Johnson)/ land bank property. Build a brick house (manufactured stone) which will be for sale. 2 car garage on alley – will rotate. Fencing will cover the entire property at front porch. Approval vote unanimous.
 - a. 3 bdrm
 - b. Basement
 - c. East property only
 - d. Land bank property to purchase
 - e. Curry Da Souza, Blevins, Approved 13, 0, 0
7. 421 South 22nd (Dave Perry) A 2 1/2 story building with carriage house. Built for client’s parents. Motion passes with a majority plus vote.
8. 1126 Bryden Road. Owner proposes to use this duplex as offices. Motion passes.
9. Long and Miami – land bank property. Construct a single-family home, 1500 SF, with basement for sale. Hardy plank siding. Motion passes unanimously.
 - a. 1000 E Long
 - b. Land Bank wouldn’t sell but now will, need to build something, no garden
 - c. No variances
 - d. 2000 sq ft
 - e. Landscape plan to planning, improve corner w/o creating vision triangle issues
 - f. Duckett, Blevins, Approved 13, 0, 0

10. Planning Minutes - Dolan, Goldsmith, Approved 13, 0, 0

E. Zoning – Commissioner Ross-Womack

a. Future Agenda Item(s) – Meeting, March 15, 2022

i. For properties:

1. 980-982 E. Fulton
2. 245 North Monroe
3. 163 North 22nd
4. 1126 Bryden
5. 421 South 22nd

- 6. Long and Miami – no variance needed
 - 7. 930 Franklin
 - ii. Demolitions:
 - 1. 200 North 21st
 - 2. 1212 Hildreth
 - 3. 436 Garfield
 - iii. 1140 Oak coming back to planning
 - b. Committee Report – no meeting
- F. Special Committee Reports
 - a. Community Engagement – Commissioner Russell
 - i. Moving to become an official committee. Currently an ad hoc committee. Incentive to have more committed people engaging with the community through a dedicated number of commissioners present. approved.
 - 1. Recchie, Hutchison, Approved 11, 0, 2
 - b. Bylaws – Commissioner Goldsmith
 - i. Presented draft updates to bylaws
 - ii. Mission statement added
 - iii. At Large descriptions
 - iv. Distribution of terms

Nelson Park Tenant Meeting
October 13, 2022

Comments delivered by Linn during the meeting:

- The owner and management team and their development partners are proposing a significant renovation of the property.
- The development team has applied for funding from the state of Ohio (OHFA) and the City of Columbus. We should know whether we have been awarded funded by the end of October or early November.
- If awarded funding, the renovations will begin late next year and occur in phases. If we aren't awarded funds yet, we will keep trying, but the renovations will of course be delayed as a result.
- First and foremost, we do not anticipate that anyone will be required to move as a result of the redevelopment plan. Everyone that currently resides at Nelson Park will get to remain at Nelson Park following the renovations.
- If (and only if) there were a need for anyone to move, you would receive a Tenant Protection Voucher to move, and your moving expenses would be taken care of. Again, we do not think there will be any permanent relocations because of the renovations.
- Due to the scale of the renovations, temporary, on-site relocation will be required. We will help you with the temporary moving process, including packing instructions, materials, equipment and the movement of your belongings themselves.
- As part of the renovation, the following upgrades will occur:
 - New water and sewer lines, which are all original.
 - New roofs and gutters
 - New accessible units
 - Complete renovations of all unit areas, including new walls, new interior doors, new bathrooms, fixtures, new kitchens and appliances, including range stoves, range hoods, dishwashers, refrigerators, garbage disposals, washers and dryers, etc.
 - New flooring (LVP)
 - New countertops, microwaves, etc.
 - New mechanicals and plumbing throughout
 - Painting of all walls, ceilings, etc.
 - New, individualized Wi-Fi internet in every unit
 - Units will be reconfigured to create additional living space square footage
 - New community building and management office space in the center of the property
- These extensive renovations will take approximately 2 years to complete, but each phase will take approximately 65 days.
- To reiterate, no one will be required to move. Please do not move. Unit renovations should only take about 2 months at which point you will move into your new unit at

Nelson Park. The owner and management team will remain the same and Linn and Markeyda will still be here with you!

Summary of tenant questions, comments, impressions during the meeting which were interspersed with the comments delivered above:

Questions:

Q: Do we have to move?

A: No.

Q: Will we be able to return to our same unit?

A: No. Due to the extensive renovation and reconfiguration, your unit will essentially no longer exist in its current form. Each building that had 4 townhomes will have 3 post-renovations.

Q: Will we have central AC?

A: Didn't really answer b/c unsure.

Q: Will the site stay the same?

A: There are some proposed changes to the overall layout including repair of the parking lots, a new access road, fewer ingress and egress points, etc.

Q: Will any buildings be demolished?

A: Yes, as currently proposed, there may be a handful of buildings that are demolished and rebuilt or demolished and not rebuilt.

Q: Will there be a senior section and a family section like there is now?

A: Yes, there will still be a separate senior section and family section like there is now.

Q: Will our rent increase?

A: No. There will be no rent increase associated with the redevelopment plan. The property will remain a 100% Section 8 Property with rents calculated based on your income.

Q: Will our address be changing, i.e., will we have to update our mailing address with the post office?

A: Your address will likely change, so we'll provide you with more information about that when the time comes.

Q: Will there be a computer lab in the community building?

A: Yes, there will be a computer lab in the community building.

Q: Will the existing brick stay the same? This type of brick looks like "the projects."

A: There may be some changes to the facade, but we don't have final plans at this time.

Q: Will there be more cameras and/or an updated camera system?

A: Yes, there will be upgrades to the security system made as part of the renovation package.

Q: Will the one-bedroom apartments will still have a "den" (small 2nd bedroom) or will they just be all one level/garden style?

A: The one-bedroom apartments will all be one level/garden style but will be more spacious.

Concerns:

There was some confusion/concern about whether they would have to move to Ivywood Apartments because of the 8bb HAP transfer notice.

It was reiterated that we do not anticipate that anyone will be required to move as a result of the redevelopment plan. Everyone that currently resides at Nelson Park will get to remain at Nelson Park following the renovations.

Similarly, there was concern about the downsizing of the property from 177 to 137 units and whether that would impact any current residents. It was explained that the current vacancy rate at the property will enable the downsizing to occur without any impact on current residents. It was also explained that the budget authority associated with the Section 8 contract for those empty units would be transferred to Ivywood Apartments so that the subsidy and affordability would remain in Columbus/Central Ohio.

Particularly Positive Reactions:

- New water and sewer lines
- New mechanicals and plumbing
- New flooring
- New stoves, ranges, dishwashers, etc.
- Wi-Fi
- In-unit washer and dryer

Re: Zoning Confirmation Letter
Address: 1994 Maryland Avenue

To Whom It May Concern:

Our records indicate the property known as Franklin County Parcel 010-070987 is zoned in the R-4, Residential District. A multiple dwelling development is a permitted use in the R-4 district. Refer to the Columbus Zoning Code for the applicable development standards.

Requests for records may be made by email at BZSRecords@columbus.gov. Requests for copies of zoning ordinances may also be obtained at: <https://columbus.legistar.com/Legislation.aspx>.

For additional zoning information applicable to this property and abutting properties, please refer to the on-line zoning map at: gis.columbus.gov/zoning/. The zoning code is available at: https://library.municode.com/oh/columbus/codes/code_of_ordinances.

Please address any questions to the zoning staff by email at zoninginfo@columbus.gov.

Sincerely,

Lisa Russell AICP
LLRussell@columbus.gov

Name

Date

The site shall be developed in general conformance with stamped exhibits. Any slight adjustment shall be reviewed and may be approved by the Director of the Department of Building and Zoning Services, or their designee, provided the adjustment does not alter or intensify the approved variances.

This ruling pertains to the above-referenced section(s) of the Zoning Code. It does not modify any other obligation you may have under other existing City or State codes, nor does it nullify your responsibility to obtain all necessary permits and licenses. Contact the Building and Zoning Services Division plans examination staff at (614) 645-7816 or (614) 645-6079 for preliminary review of all applicable requirements.

NOTICE

An order of the Board of Zoning Adjustment becomes effective immediately. All variances and special permits, unless otherwise specified by the Board, will be void one (1) year after the date issued unless extended by the Board or unless an affirmative action by the applicant has been taken.

REGIONAL HOUSING STRATEGY

FINAL REPORT

EXECUTIVE SUMMARY

SEPTEMBER 2020

Regional Housing Strategy

Acknowledgments

The Regional Housing Strategy was prepared by the Mid-Ohio Regional Planning Commission (MORPC), together with a consultant team led by Enterprise Community Partners.

In accordance with requirements of the US Department of Transportation (USDOT), MORPC does not discriminate on the basis of race, color, national origin, gender, or disability in employment practices or in programs or activities. More information on non-discrimination resources and related MORPC policies is available at www.morpc.org.

Central Ohio is at a critical inflection point.

The past decade has been one of historic growth for Central Ohio, and that growth is expected to continue for the foreseeable future – with the Mid-Ohio Regional Planning Commission (MORPC) projecting the region to have as many as 3 million residents by 2050. Not only is the region growing; it is changing. Increases in both the young adult and 65 and older populations are shifting housing preferences. Furthermore, the highly competitive real estate market and a persistently high poverty rate have led to more vulnerable groups struggling to find housing in neighborhoods of their choice.

The Central Ohio Regional Housing Strategy (RHS) sets forth a bold vision: A future where growth and recovery help realize more equity among Central Ohioans, not less. Housing—where it's built or maintained, who it's for, and how it's priced—can be a platform to achieve this vision.

How was the RHS developed?

The RHS is a collaborative effort by public and private partners across the Central Ohio Region, led by MORPC, the City of Columbus, and Franklin County. It was supported by the consultant team of Enterprise Community Partners, Inc., Ice Miller LLP, RAMA Consulting Group, and Vogt Strategic Insights. The RHS would not have been possible without the wide range of stakeholders who committed time and resources to this effort.

The process began with a thorough investigation of existing and projected housing needs in the region, grounded by both quantitative and qualitative assessments to understand housing supply and demand throughout the region, barriers to development, and the regional housing finance landscape.

From there, potential investment strategies and housing interventions were identified, based on national best practices. These strategies were vetted with regional stakeholders to better understand their regional relevance and viability, resulting in region-specific recommendations for future action. Each strategy was then aligned with the various housing submarket conditions throughout the region to help decisionmakers choose among the potential interventions for implementation.

Stakeholder engagement was the backbone of this process. Engagement activities included stakeholder convenings, regional strategy workshops, informant interviews and focus groups, and an on-line community survey. More information about this process may be found in the Stakeholder Engagement Summary.

The RHS engagement strategy focused on ground-truthing findings and recommendations while building the capacity of decisionmakers to implement regional housing solutions. Further engagement with a broader range of community members is necessary to advance the RHS vision and ensure implementation is grounded in the full range of Central Ohioans' lived experiences.

A NOTE ON THE EVENTS OF 2020

The Regional Housing Strategy was developed during the 2020 COVID-19 pandemic. Although at the time of writing, it remains unclear what the true impacts of the pandemic will be on the region's housing market, COVID-19 and the civil unrest experienced across the country have changed the lens through which we view issues such as housing.

Anecdotal evidence suggests housing instability, including homelessness, may affect more people, including people who have never had concerns about affording their homes before. Moreover, we have all witnessed and felt the sadness, the outrage, and the frustration concerning senseless deaths and unnecessary trauma across the nation and closer to home. These tragedies impact us deeply and cast a brighter light on racism and its long legacy and impact on every community.

The Regional Housing Strategy seeks to be responsive to the uncertainty generated by COVID-19, to address disparities through action, and to reaffirm Central Ohio's commitment to inclusive and equitable housing. It creates a strong and agile toolkit that can address a wide range of housing issues in ways that use housing as a platform for equitable growth and recovery. Committing to and taking local action on housing issues positions the region to tackle housing instability and socioeconomic disparities, and promotes stability and resilience among Central Ohio households.

The core regional housing issues.

1 Increased competition for homes, driven by increased population growth, a low rate of housing production, and lasting impacts from the Great Recession.

2 Barriers limiting access to homes, including disparities in lending practices, creditworthiness, housing instability, and housing discrimination.

3 Limited supply of homes priced for low-income households, as more homes are built at higher price points, the region loses some of its existing affordable options (including single-family rentals and expiring subsidized housing), and demand for rental assistance continues to outweigh supply.

4 Demand for more homes that serve a wider range of ages, abilities, and household sizes, which is growing as a result of the region's changing demographics. This includes trends like the increasing racial and ethnic diversity in Central Ohio and the growing number of both older and younger adults in the region.

5 Housing instability among Central Ohioans, as reflected in the region's rates of cost-burden, evictions, homelessness, and homes in need of repair.

People and areas across Central Ohio do not universally experience these issues in the same way or to the same extent. Some people – including low- and moderate-income households, families with children, people of color, older adults, and people living with disabilities – are more acutely impacted by these housing issues. And these issues often look different in different areas of the region. Recognizing this, the RHS provides tailored data and solutions that speak to the range of submarket conditions across the region.

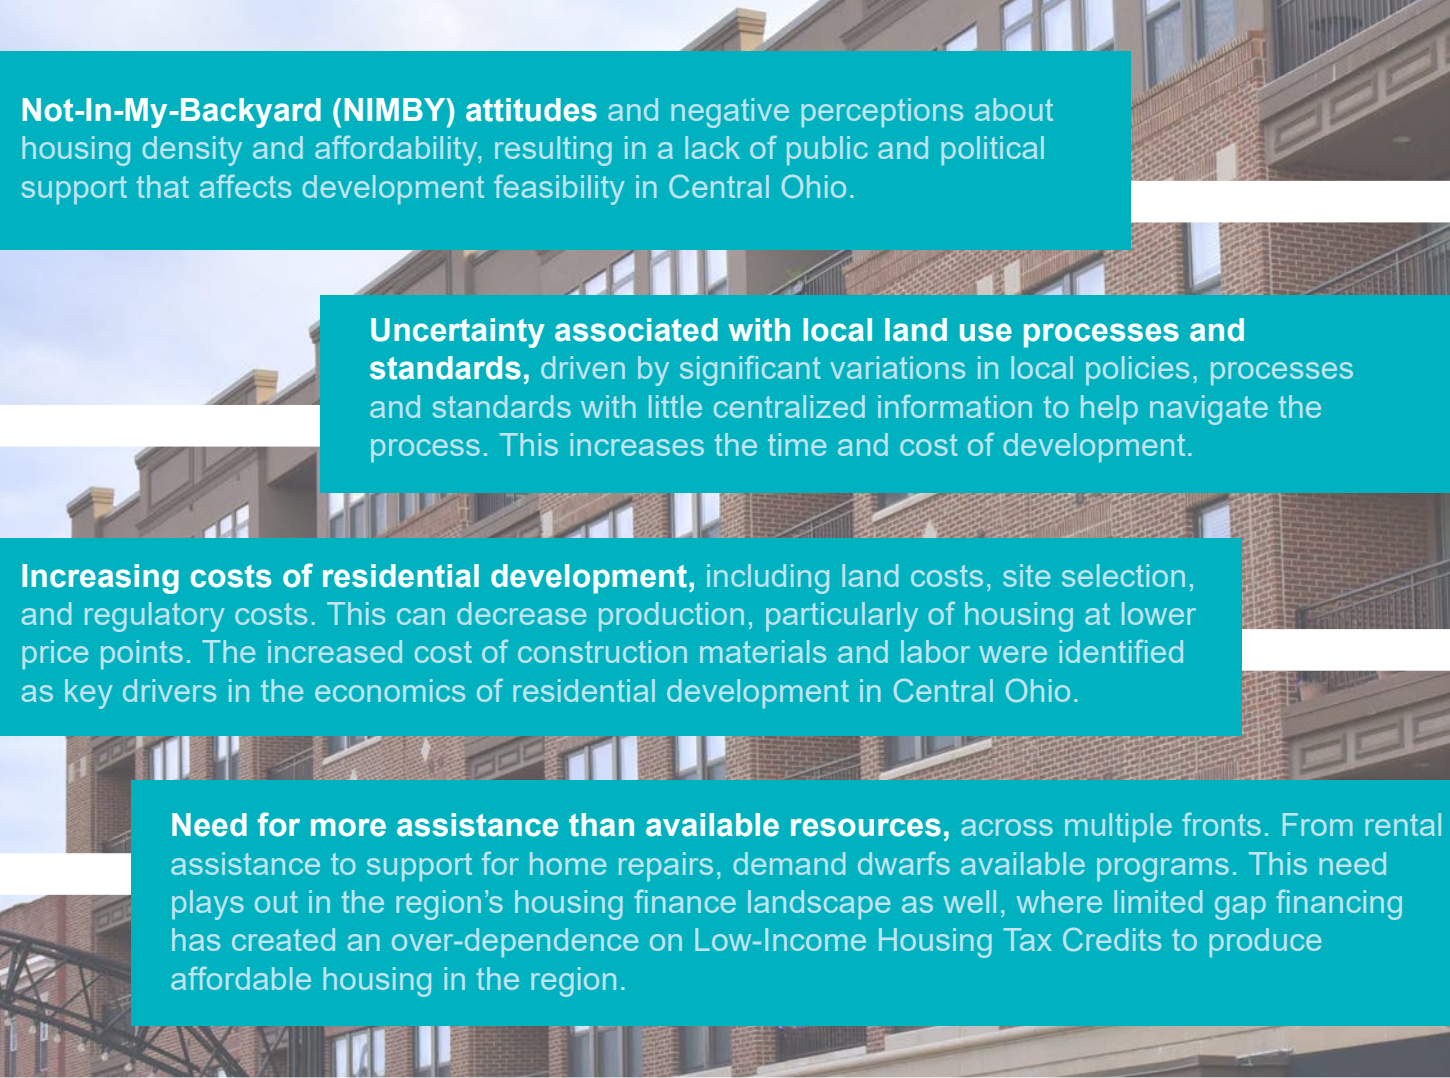

More information about regionwide and submarket-specific housing conditions in Central Ohio may be found in the RHS Existing Conditions summary.

What issues does the region face?

Housing issues are not new to the region. In fact, most are well-documented in previous reports – including the Columbus and Franklin County Affordable Housing Challenge and Joint Analysis of Impediments to Fair Housing Choice, insight2050, and the Ohio Housing Finance Agency’s annual Housing Needs Assessment. The RHS set out not only to deepen the region’s understanding of these issues, but also to investigate the barriers that were holding the region back from addressing them.

The following barriers rose to the top:

Not-In-My-Backyard (NIMBY) attitudes and negative perceptions about housing density and affordability, resulting in a lack of public and political support that affects development feasibility in Central Ohio.

Uncertainty associated with local land use processes and standards, driven by significant variations in local policies, processes and standards with little centralized information to help navigate the process. This increases the time and cost of development.

Increasing costs of residential development, including land costs, site selection, and regulatory costs. This can decrease production, particularly of housing at lower price points. The increased cost of construction materials and labor were identified as key drivers in the economics of residential development in Central Ohio.

Need for more assistance than available resources, across multiple fronts. From rental assistance to support for home repairs, demand dwarfs available programs. This need plays out in the region’s housing finance landscape as well, where limited gap financing has created an over-dependence on Low-Income Housing Tax Credits to produce affordable housing in the region.

Like the issues themselves, the barriers to addressing them vary significantly across the region. The housing finance landscape is a key example of this: there are many more resources for development financing and direct housing assistance within Columbus and Franklin County, compared to surrounding counties. To account for this variation, the RHS includes an Investment Allocation Portfolio that demonstrates what it will take, from a funding perspective, to address regional priorities and needs.

Where do we go from here?

The RHS culminates in a robust Implementer’s Toolkit that includes more than 100 different actions, designed to equip leaders across Central Ohio with the information and tools to action on the region’s most pressing housing issues – whether they are a local or state government official, a member of the development community, an employer, a housing advocate, a financial institution or philanthropy, the administrator of a housing program, or an interested citizen.

From the toolkit, stakeholders involved in the RHS process adopted the following actions as top priorities for the near-term.

Priority actions elevated at the August 2020 stakeholder working session.

At this workshop, stakeholders prioritized among selected actions for each of the five core regional housing issues using live polling technology. In breakout sessions organized around the five core housing issues, participants focused on the action receiving the most votes, with facilitated questions of who, what, and where guiding the discussion. A few common themes emerged and each breakout session wrestled with how to balance local, regional, and statewide actions – as well as participation by public, private, and non-governmental sectors.

Participants agreed that regional tasks were more effective if they were shaped at the local level, and in partnership with staff from peer communities. That approach, in turn, should lead to broader support from communities throughout the region. Likewise, a diverse region speaking with one voice would effectively carry a message at the state level.

In most discussions, stakeholders also agreed that the government and policy voices would carry further if they also were backed by the private and non-governmental organization (NGO) sectors – stressing the idea that addressing housing issues is good for economic development, a stable workforce, public education, and many other economic and social benefits.

A summary of the five breakout discussions is below.

Core Regional Housing Issue: Increased competition for homes
Priority Action: Green tape development review

“Green tape” development review removes or lowers regulatory barriers, making it quicker or cheaper for developers to move ahead with their projects – in return for providing a public benefit, such as low/moderate-income homes in residential development. Stakeholders recommended initiating this action with a pilot project so communities throughout the region could see how the process works.

This – combined with a public awareness campaign – could address misperceptions about density, development, and affordable housing, and make housing a natural part of discussions about economic development. It could also open the door to zoning changes that balance the needs of economic development and housing. Stakeholders also suggested planning with, or an advisory role for, entities such as school districts and county engineers’ offices which have a stake in housing issues.

Core Regional Housing Issue: Housing instability among Central Ohioans
Priority Action: More tenant-based rental assistance to address housing instability

Housing advocates already know where the eviction hotspots are, what entities already provide assistance or models, and what interests have the knowledge and expertise to develop and expand an assistance program. Most of the data and programs, however, are focused on Columbus and Franklin County. Information and infrastructure are needed for the entire region.

One example elevated by the group is a three-year pilot program beginning at Columbus State Community College, which works with public and non-profit partners to provide rental assistance to students at-risk of having to leave school. Other local programs have focused on rental assistance and financial and life counseling for single mothers. Stakeholders suggested that these and other programs could be continued and expanded, especially if they are aligned with complementary actions, such as source of income protection policies and good landlord programming.

Core Regional Housing Issue: Barriers limiting access to homes
Priority Action: Enact source of income protection laws (or otherwise expand fair housing laws).

Stakeholders considering statewide source-of-income protection laws determined it would be easier to make those changes at the municipal level. They also agreed that initiatives to get people into much-needed housing should include funding for rehabilitation of housing and a regional risk mitigation fund. The carrot-and-stick approach could ease property managers' opposition to such laws.

It also would require finding, or creating, an entity to manage the funds – and doing so at a multi-jurisdictional and regional scale. But they argued it is more important to build this model effectively than to build it too quickly and recommended bringing potential opponents to the table as the strategy is being developed.

Municipalities could quickly and easily draft an ordinance to make it harder for landlords to deny housing to people who use federal housing vouchers to help pay their rent. But enacting it would require addressing likely opposition. A risk mitigation fund could help soften the opposition, as could a regional approach. If a municipal ordinance is drafted with help from other local leaders, the regional solidarity would likely prompt real estate interests to help with a solution that considers the needs of all.

The Community Shelter Board and Columbus Metropolitan Housing Authority came up as possible fund managers. A role for the Central Ohio Mayors and Managers Association (COMMA) could reinforce the regional nature of housing challenges. MORPC's history of rehab assistance to low- and moderate-income homeowners could be expanded.

Core Regional Housing Issue: Limited supply of homes priced for low-income households
Priority Action: Create a State housing tax credit to support priority housing development

Stakeholders in this group, as with those looking at source-of-income protections, saw great value in localized programs and Central Ohio advocacy to create state support through housing tax credits to serve as additional gap funding for affordable and mixed-income housing. This local and regional support would aid existing efforts by groups such as the Ohio Housing Council. A coalition in Central Ohio could be a model for similar efforts in other metropolitan areas – especially if it includes groups such as private developers.

Existing programs are limited in their use, but a broad statewide program could go into Community Reinvestment Areas (CRA) and Opportunity Zones and provide single-family and multifamily homes and a variety of tenures, depending on the type of structure.

A statewide effort should emphasize benefits that go beyond those who live in new affordable housing – such as a more stable workforce. Stakeholders suggested a study of potential sources and uses for a state housing tax credit and an overview of housing tax credit legislation in other states. They also identified many organizations and interests whose support would be valuable, including the Ohio Municipal League, County Commissioners Association of Ohio, Ohio Economic Development Association, Ohio Housing Council, One Columbus, and others.

Core Regional Housing Issue: Demand for more homes serving a wider range of ages, abilities, and households
Priority Action: Create a pilot that supports the development of diverse, lower-cost housing products, leveraging innovative design and construction techniques

This group had few specific proposals for pilot projects, other than an overlay zoning pilot in Delaware County townships to create new development options and expedite the zoning process.

But the stakeholders had many thoughts about the characteristics of sites for pilots, such as areas with access to transit and other mobility alternatives; concentrations of economic activity with little affordable housing (downtown Columbus and Bridge Street in Dublin); and parcels that could accommodate such housing types as microunits, accessory dwelling units, etc.

They also recommended partnering with developers, school districts, economic development interests, and financial interests; and identified zoning density waivers and tax abatements among tools to spur pilot projects.

MORPC will work with its members to create Local Housing Action Agendas that translate Central Ohio's regional housing vision and strategy framework into meaningful local action on housing issues, accounting for unique local priorities and context. Each agenda will include a jurisdiction-specific overview of housing needs and top priorities for local action, with a specific eye towards advancing equitable growth and building community resilience. The process of developing each agenda will offer opportunities to engage a broader range of community stakeholders in crafting local housing solutions across the region.

To further hold the region accountable for action, MORPC has created a dashboard to track progress on key housing indicators related to each of the core regional housing issues. This progress can only be achieved if all partners work together and apply the strategies of the Implementer's Toolkit.

Realizing a future of equitable growth and inclusive prosperity in Central Ohio requires a coordinated, regional approach that hinges on committed and bold leadership at all levels of governance and among developers, financial institutions, nonprofits, foundations, and community members. Everyone has a role to play in creating a robust housing market in Central Ohio where every resident, no matter their race, age, or ability, can find safe and decent housing without being discriminated against or cost-burdened.
Find out how you can be a part of the solution in the Central Ohio Regional Housing Strategy.

NEAR EAST AREA PLAN

The greatest strength of the Near East Side is its architecturally desirable in-town neighborhoods. The Housing and Historic Preservation section builds on this strength by providing design guidelines to encourage appropriate new and renovated housing. The following goals aim to balance revitalization with diversity and the economic needs of current residents:

- ▶▶ Maintain sound housing for all income levels in the area and avoid the displacement of existing residents, particularly senior citizens.
- ▶▶ Develop new housing that is compatible with the existing architecture.
- ▶▶ Preserve existing housing stock and reduce the rate of housing demolition.
- ▶▶ Rehabilitate abandoned, boarded-up, and vacant housing units.

The Transportation section of the plan seeks to enhance residential and commercial areas of the Near East Side by improving connectivity, pedestrian-friendliness, and access to alternative forms of transportation by addressing the following goals:

- ▶▶ Balance the needs of the automobile and pedestrian/bicyclist.
- ▶▶ Form a community mobility plan to implement the plan's goals, analyze impending changes to I-71 on traffic circulation, focus traffic movements to commercial nodes, and reduce traffic movement through primarily residential areas.

The Community Facilities and Services section of the plan is concerned with public access to parks, recreation centers, police and fire stations, schools, utilities, and other services. The section addresses the following goals:

- ▶▶ Maintain/create safe, well-maintained parks, recreational centers and trails.
- ▶▶ Create a strong partnership between residents and neighborhood schools contributing to an environment of learning.
- ▶▶ Sustain/create a safe environment and strong sense of personal security for all.

Finally, the Implementation section suggests strategies for public outreach and other efforts to promote the plan and engage in projects. It also serves as a guide for checking a proposed development for consistency with the plan through use of a development review checklist. The checklist is intended to allow developers, civic associations, NEAC commissioners, city staff, and other stakeholders to evaluate development proposals against the specific guidelines and recommendations of the Near East Area Plan. Developers will be able to consult the checklist to get an idea of the expected standards; civic associations and neighborhood organizations will be able to use the checklist to provide input on development proposals to NEAC; and NEAC will be able to make consistent, well-informed decisions and recommendations on development proposals to the city. This should streamline the decision-making process, enhance neighborhood communication, and maximize the potential for the implementation of the Near East Area Plan.

HOUSING AND HISTORIC PRESERVATION PLAN

The housing and historic preservation plan strives to strike a balance between the general goals of 1) fostering historically appropriate revitalization of existing housing stock and increased amounts of market rate infill housing with 2) the need to maintain sound housing for all income levels in the area and avoid the displacement of existing residents. This is one of the greatest challenges faced by communities in the process of change such as the Near East Side. Housing design guidelines, presented after this section, will be one of the primary tools that help to ensure appropriate market rate and affordable infill housing without presenting an extraordinary burden on potential developers. An immediate need on the Near East Side is to increase the number of market rate residential units. For the purpose of this plan, market rate should be considered housing developed with price points aimed at individuals or families earning 80% to 120% of the Area Median Income. For 2005, 100% of the Area Median Income for a family of four is \$ 63,800 and 80% of the Area Median Income is \$35,850 for individuals and \$51,200 for a family of four. Market rate could include proposed housing that includes subsidies that would reduce the price for the purchaser, yet still increase the market for the neighborhood.

Specifically the plan identifies policies and accompanying strategies for dealing with the following key issues:

- 1) Low percentage of owner-occupied housing units.
- 2) Deteriorating housing conditions, vacant structures, and inappropriate alterations and renovations.
- 3) Vacant lots and the potential for incompatible infill development.
- 4) Potential displacement of area residents and potential shortage of affordable housing.
- 5) Areas with high concentrations of poverty and low income housing.

The overall goals of the Housing and Historic Preservation Plan:

- ▶▶ Maintain sound housing for all income levels in the area and avoid the displacement of existing residents, particularly senior citizens.
- ▶▶ Develop new housing that is compatible with the existing architecture.
- ▶▶ Preserve existing housing stock and achieve a reduced rate of housing demolition.
- ▶▶ Rehabilitate abandoned, boarded-up, and vacant housing units.

HOUSING AND HISTORIC PRESERVATION PLAN

ISSUE 2:

Deteriorating housing conditions, vacant structures, and inappropriate alterations and renovations

POLICY

The preservation and renovation of the existing historic housing stock is a crucial aspect of the revitalization of the Near East Side. Renovations should be consistent with the historic character of the area's housing.

STRATEGIES

- ▶▶ Encourage area residents to rehabilitate their homes as a means of supporting revitalization efforts in the community. Inform area residents of private and public loan and grant dollars available for housing rehabilitation.
- ▶▶ Encourage code changes that require property owners to comply with exterior housing code standards for both occupied and unoccupied structures.
- ▶▶ Promote the availability of funds and programs that provide assistance to residents and property owners wanting to rehabilitate their historic structures.
- ▶▶ Encourage preservation and renovation of historic structures rather than demolition.
- ▶▶ Promote relocation of sound historic structures to vacant parcels within the neighborhood as a last resort before demolition.
- ▶▶ Enhance communication with code enforcement officers through the participation of neighborhood organizations and block watches which would notify code enforcement officer of priority issues and property owners of potential assistance programs.
- ▶▶ Cooperate with existing community development corporations to investigate the potential of establishing small scale community reinvestment areas which could be used to renovate existing structures (additionally, see strategy below regarding infill housing development).
- ▶▶ Utilize the housing design guidelines in this plan for guidance with appropriate housing renovation.
- ▶▶ Support city efforts to establish new code and programs which would spur the redevelopment of vacant homes.

HOUSING AND HISTORIC PRESERVATION PLAN

ISSUE 4:

Potential displacement of area residents, particularly seniors, and potential shortage of affordable housing as a result of historic designation or other reasons

POLICY

The revitalization of the Near East Side should provide housing opportunities for all income levels and contribute to enhanced economic opportunity for all residents

STRATEGIES

- ▶▶ Maintain quality housing for all income levels, particularly existing residents and senior citizens.
- ▶▶ Work with local agencies to organize residents so they can play a role in appropriately channeling new growth and take advantage of new economic development opportunities that come as a result of revitalization, i.e., the creation of new businesses, obtaining new jobs, etc.
- ▶▶ Work with local agencies and civic groups to assist with organizing local residents to raise awareness of home buying and selling strategies, available affordable housing stock, home buying assistance programs, etc.
- ▶▶ Work with Community Properties and other organizations to assist with the implementation of new programs and efforts in support of Section 8 housing on the Near East Side to assure long-term, well maintained housing for those in need of subsidized housing.
- ▶▶ Work with the city's Land Bank to assure that a percentage of infill housing developed on Land Bank property is affordable for lower and moderate income individuals/families.

ISSUE 5:

Areas with high concentrations of poverty and low income housing

POLICY

Support the development of new market rate single family and rental housing to help create a balanced amount of housing for all income levels.

STRATEGIES

- ▶▶ Discourage high concentrations of very low-income housing.
- ▶▶ Implement previously described strategies to increase the production of market rate housing throughout the area.
- ▶▶ Support the deconcentration of subsidized housing, if such opportunity arises.

Selected Soil Interpretations

Franklin County, Ohio

[The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. The table shows only the top five limitations for any given soil. The soil may have additional limitations. This report shows only the major soils in each map unit]

*This soil interpretation was designed as a "limitation" as opposed to a "potential" or "suitability". The numbers in the value column range from 0.01 to 1.00. The larger the value, the greater the potential limitation.

Map symbol and soil name	Pct. of map unit	ENG - Dwellings With Basements (OH)*		ENG - Local Roads and Streets (OH)*		FOR - Potential Erosion Hazard (Off-Road/Off-Trail) (OH)*

Response to ER consultant Questions

Nelson Park Apartments Columbus, Ohio

TO: Kelan Craig, Renewal Housing
Joe Berardi, Berardi+

FROM: John Boyce, Berardi+

Date: 12/15/2023

GENERAL:

- NOTE: Due to the proposed project changes and the adaptive reuse of the three apartment buildings on the west side of the project site, please complete the attached updated noise attenuation form.
 - Complete Noise attenuation form attached.

- 10. HUD is now requiring evaluation of resilience of projects in the event that projected effects of climate change are realized. Projected effects in the project area include increased heat in the form of an increase in annual cooling degree-days and in frequency of hot days (days for which high temperatures exceed 90°F and/or low temperatures are above 80°F). How will the project protect residents from heat-related illness and other health effects of heat and from increased risks of air pollutant accumulation due to heat island effects? Does the project design include such features as cool pavement, green or cool roofs, vegetative cover or other heat-island-reduction features, or cooling features in the event of power outages such as operable windows with screens and/or an emergency cooling plan?
 - On the site there is grass cover and landscape plantings throughout the site. There are no grass pavers or green pavement designs included in the design. Dumpster Pads will be concrete, which has a high reflectivity and reduce heat island effects in paved areas.

- 6. Project Engineer/Project Architect needs to provide a description of the storm water control at the site (how collected, where released, etc.), including any comments that can be specifically directed toward limitations of the soils on-site. Response should track storm water from roofs, lawns and pavement through any on-site control or transport features and to the discharge or infiltration point(s). Submission should be a copy of Project Engineer/Architect letter or e-mail addressing the issue.
 - Stormwater is collected in inlets around the site and stored underground in pipes and an underground stormwater detention system. The water will drain off the site into the city municipal stormwater system. Roof drains from the buildings downspouts route water to the storm sewer system on site. Site soils do not allow for infiltration as they have limited permeability. The underground stormwater detention is connected to the City municipal storm sewer system to slowly release the stormwater based on local and state municipal requirements. The underground storm water system holds storm water runoff for multiple days, which encourages infiltration and cools runoff from hot pavement sources, which

reduces the pollutant impact of runoff on the receiving stream.

- 7. Provide a list of permits and approvals that will be required from the local or county government or state building office for construction, and the name(s) and phone number(s) of the government officials (or URLs of the web sites) supplying the information used to compile the list.
 - The list of permits and approvals for the Nelson Park Apartments include:
 - City of Columbus Zoning Department Approval
 - City of Columbus Building Department Approval
 - Site Permits are listed below:
 - City of Columbus – Water Service Plan (<https://www.columbus.gov/utilities/document-library/>)
 - City of Columbus – CC Plans (<https://www.columbus.gov/utilities/document-library/>)
 - City of Columbus – Final Site Compliance Plan (<https://new.columbus.gov/Business-Development/Building-Zoning>)
 - City of Columbus – Waterline Only Plan (<https://www.columbus.gov/utilities/document-library/>)

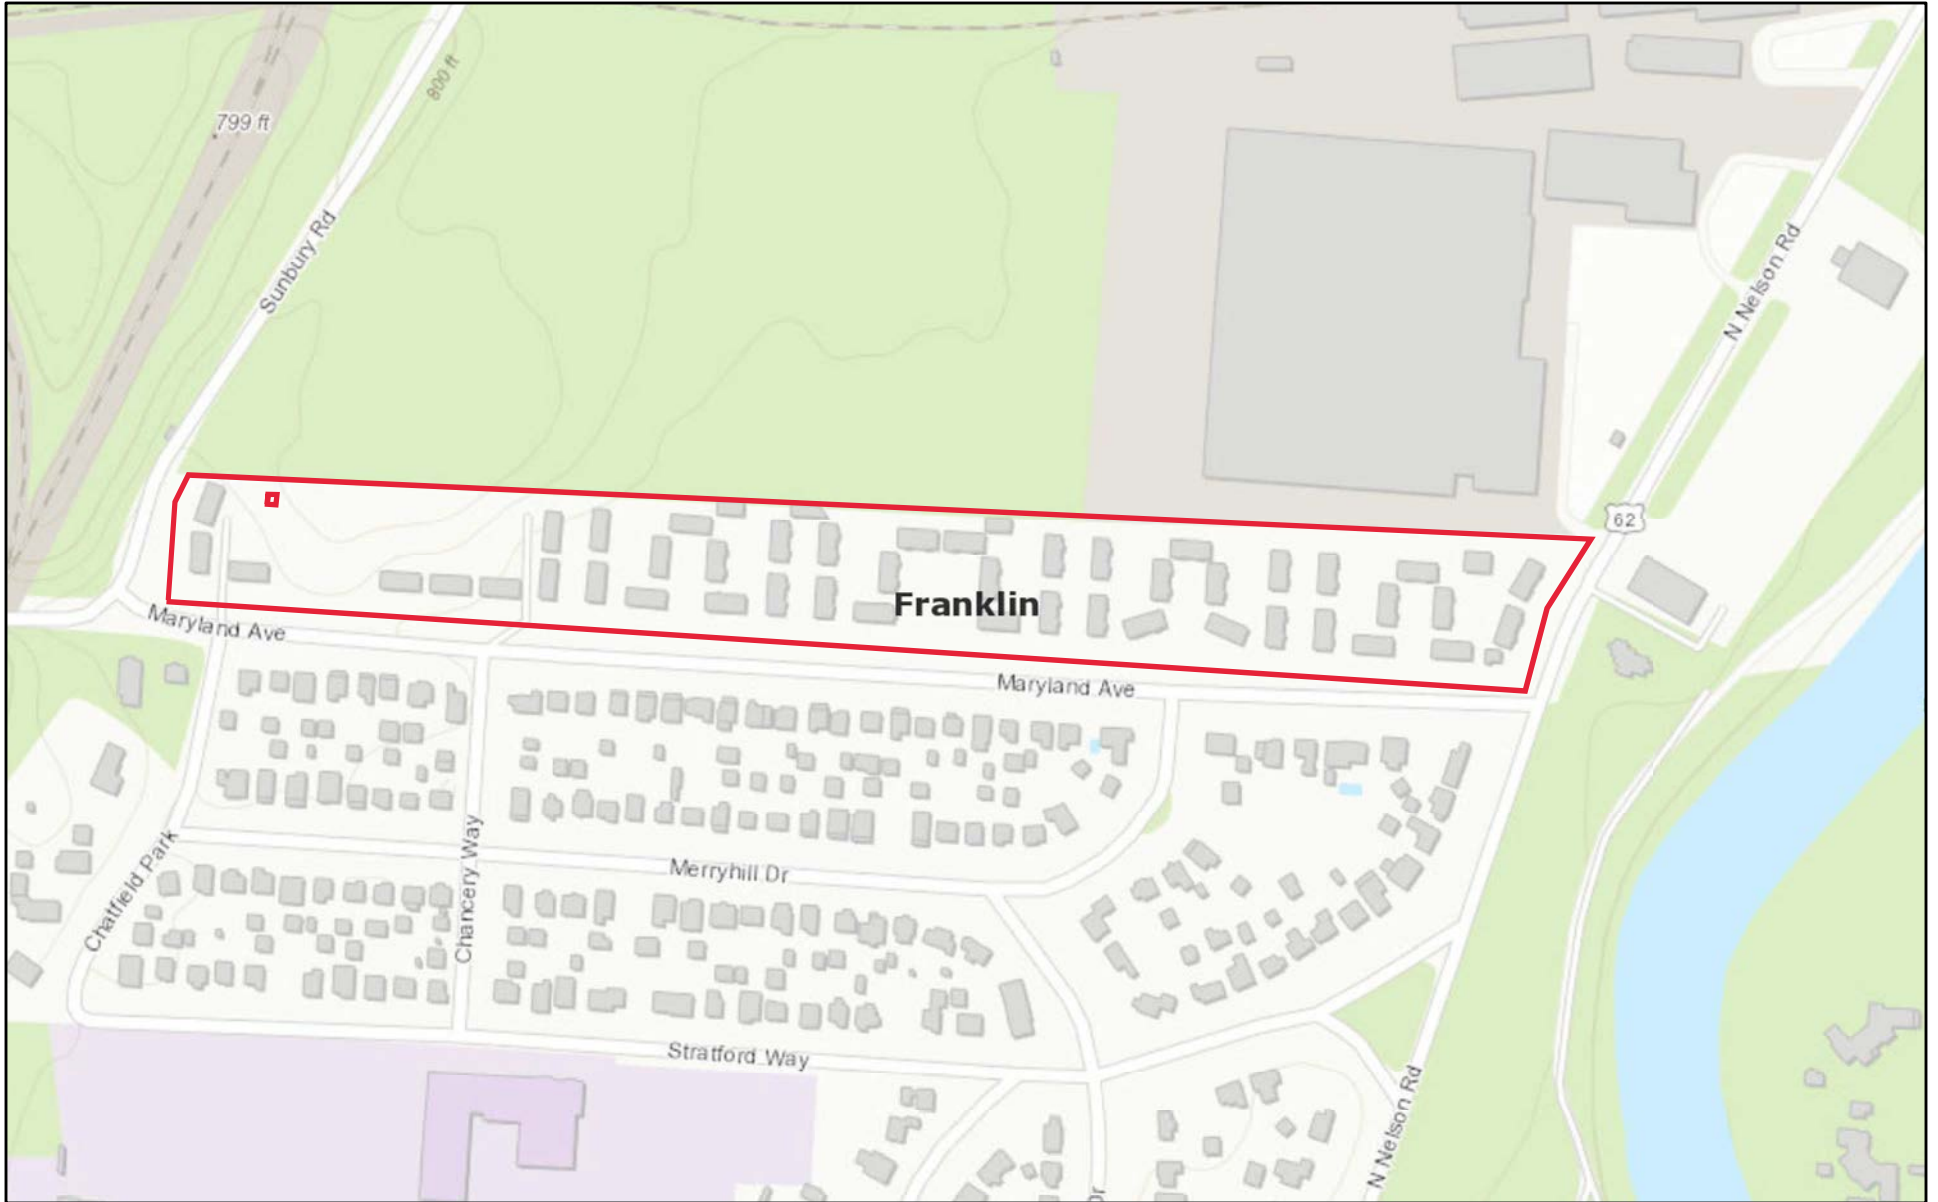

- 12. For sites with existing or proposed retaining walls or steep slopes (greater than 4H:1V), indicate how accidental access to the tops of the walls/slopes, and therefore accidental slips, trips and falls, will be prevented. Provide a site plan with topographic contours.
 - The only slopes over 4:1 are outside of sidewalk paths. The area does not need to be traversed by pedestrians. The sidewalk is located at the bottom of these slopes. Similarly the retaining walls are in the same area. There is no sidewalk located at the top of the retaining walls. All retaining walls with over 30" of fall will construct rail to help prevent falls.

- 14. For rehab and adaptive reuse projects: Project Engineer/Architect needs to review buildings and comment briefly on any structural concerns and the necessary mitigations. Please also have Project Architect/ Engineer specifically comment on whether any of the structural concerns are attributed to soil conditions. Submission should be a copy of Project Engineer/Architect letter or e-mail.
 - Per the review of existing conditions at the site there are no known structural concerns that are attributable to soil conditions.

- 20. Please provide information on tree clearings and the locations of any trees that will be cut as a result of the project. If a landscaping/demolition plan depicting the location of the trees to be cut is available, please include.
 - We plan to maintain existing trees on site. There are a few trees that may not survive the construction activity. These trees are noted as removed on the site plan.

Discount shopping can be found at Dollar Plus, as well as Family Dollar, both of which are within 1.7 miles. Dining options include Madison Soul Food Kitchen, Old Bag of Nails and Wendy’s, all within 0.9 miles of the site. The United States Postal Service is located 1.6 miles southwest of the site.

School age children residing at the site may attend Eastgate Elementary School, 0.3 miles southwest; Champion Middle School, 1.4 miles west; and East High School, 1.5 miles southwest. Day care is provided at Our Play Station, Academy Kids Learning Center and Future Leaders Learning Academy, all within 0.9 miles. Postsecondary education is provided at Columbus State Community college, 3.4 miles west. The Columbus Metropolitan Library - Shepard Branch is 1.0 mile northeast.

Recreation is provided within 1.1 miles at Nelson Park, Saunders Park and Jeffrey Park. Drexel Theater and the Columbus Museum of Art are within 2.9 miles. The YMCA of Central Ohio - Eldon and Elsie is 0.9 miles southwest.

6. Overall Site Evaluation

Community services are within a convenient drive or bus ride from the site, though other than employment at the adjacent Amazon Distribution Center, none are within walking distance. The site benefits from its location proximate to the elementary school and Nelson and Jeffrey parks within an established residential neighborhood where the homes are in generally average and good condition.

It is notable that the site within 0.2 miles south of Interstate 670 and 300 feet of active railroad tracks, management indicated these land uses have not negatively impacted marketability over the years. The railroad tracks are raised and surrounded by wooded land, which mitigates noise and vibrations.

Both visibility and access are considered good.

The site is in proximity to opportunities for shopping, employment, recreation, entertainment and education. Health and safety services are within 1.6 miles of the site. The site has convenient access to major highways and public transportation. Overall, we consider the site’s location and proximity to community services to have a positive effect on its continued marketability

Site and Neighborhood Area Condition Summary			
Current Site:	Existing Site	Site Visibility:	Good
Access to Services:	Good	Site Vehicular Access:	Good
Current Neighborhood:	Good	Trend:	Steady
Predominant Neighborhood Land Use:	Residential, Commercial, Industrial		
Subject Site Walk Score*:	19 (Car Dependent): “Almost all errands require a car.”		

*Source: www.walkscore.com. Walk Score is a measurement of the walkability of an address, ranging from 0 to 100 (0 being least walkable and 100 being most walkable). The score is based on Walkscore.com’s patented system of methodology that includes analyses of road metrics, population density and pedestrian routes to nearby services and amenities.

7. Crime Risk

The FBI Uniform Crime Report (UCR) is the primary source for Crime Risk Data. The UCR is the compilation of data the FBI collects from each of roughly 16,000 separate law enforcement jurisdictions across the country. The current update reveals 95% overall coverage rate of all jurisdictions nationwide and a 97% of all metropolitan area jurisdictions.

Applied Geographic Solutions applies the UCR at the jurisdictional level to model seven types of crime at other levels of geography. The national average is the base for the Risk Index standards. The 100 Risk Index value for a precise risk indicates that, for the area, the risk’s average probability is consistent across the United States.

It is notable the aggregate indexes for total crime, personal crime and property crime are not weighted; a murder is no more significant statistically than petty theft. Accordingly, exercise caution in their use.

The site ZIP code (43219) has a total crime risk of 229, which is above the county and national indexes, with an overall personal crime index of 211 and property crime index of 232.

	Crime Risk Index	
	Site ZIP Code	Franklin County
Total Crime	229	135
Personal Crime	211	104
Murder	426	179
Rape	263	187
Robbery	400	181
Assault	124	58
Property Crime	232	140
Burglary	254	149
Larceny	214	137
Motor Vehicle Theft	324	142

Source: Applied Geographic Solutions

The crime risk index in the site ZIP code is more than twice the national average. Ms. Driscoll, the site manager, noted incidents of crime at the site are primarily domestic in nature. She went on to note that very few incidents of gun or gang violence have occurred at the site and indicated the surveillance system enhances the residents’ perception of safety at the site. We do not anticipate crime will be an issue moving forward.

Maps illustrating the location of community services and area crime risk by census block groups (BG) follow.

NEEDS LIST 2 NELSON PARK APARTMENTS

TO: Kelan Craig, Renewal Housing Associates, LLC (kcraig@renewalhousing.com)

FROM: Alex Tadda (atadda@cmtengr.com)

DATE: September 12, 2023

1. Provide information on energy conservation measures to be implemented at the project site. The project will achieve National Green Building Standards (NGBS) Bronze certification per the current architectural plans and scope of work. An initial plan review and NGBS checklist are enclosed for reference.

4. Visibility and Access

The subject site buildings front Maryland Avenue, Nelson Road and Sunbury Road and are clearly visible to passing motorists on all three roadways. Signage at the corner of Maryland Avenue and Nelson Road is clearly visible to passing motorists. Overall, visibility is considered good.

The site’s parking lots are accessible from Maryland Avenue, which has generally light traffic, both vehicular and pedestrian. Access is convenient for motorists traveling in either direction on that roadway, and a traffic light at the intersection with Nelson Road facilitates the moderate traffic along that roadway.

Sidewalks are present at the site and along the neighboring roadways. Overall, access is considered good.

5. Proximity to Community Services and Infrastructure

Community Services	Name	Driving Distance from Site (miles)

This map is based on a rating system developed by Reid Consulting Group, LLC. Data sources include Ookla Speedtest Intelligence® data licensed by InnovateOhio from the State of Ohio for the months of February 2020 through August 2021, carrier filings of available speeds with the FCC (Form 477), carrier reports of actual broadband deployments to USAC (HUBB), RDOF Phase 1 eligibility and E-911/LBRS household locations.[†]

Unserved and underserved ratings are color coded at the census block level:

0-9 Mbps	Red: Less than 10/1 Mbps
10-24 Mbps	Orange: At least 10/1 Mbps and less than 25/3 Mbps
25-49 Mbps	Yellow: At least 25/3 Mbps and less than 50/10 Mbps
50-100 Mbps	Light Green: At least 50/10 Mbps and less than 100/20 Mbps
100+ Mbps	Dark Green: Greater than 100/20 Mbps

We conducted analysis of the raw Ookla® data for the months of February 2020 through August 2021, applying the following filters:

Filter

Include desktop, iOS, and Android app results*

Exclude results with GPS precision of greater than 200 meters**

Include only results from fixed broadband providers

**iOS and Android results were included only if the device was connected to wi-fi during the speed test.*

***To protect consumer privacy, Ookla® limits location precision to +/-100 meters. As a result, a single location may include multiple households and many individual tests.*

Using the Ookla® results we rated each location based on the average of up/down speeds for all tests at that location. We then graded census blocks based on the median up/down speed of all locations within each block. Block-by-block ratings were further refined based on RDOF eligibility, past HUBB deployments, and Form 477 data. For blocks with no Ookla test results, extrapolated ratings were assigned where possible via comparative analysis of population density, Form 477 coverage, HUBB data, and RDOF Phase 1 awards. Areas that could not be assigned an extrapolated rating are shown in white on the map.

[†]US Census household counts were used instead of LBRS in the following counties: Auglaize, Butler, Carroll, Clermont, Cuyahoga, Delaware, Franklin, Geauga, Hamilton, Harrison, Henry, Highland, Mahoning, Medina, Tuscarawas, Union, and Warren.

NELSON PARK SUPPORTIVE SERVICE PLAN

I. POPULATION TO BE SERVED

Description

Columbus Metropolitan Housing Authority ("CMHA"), in conjunction with Young Men's Christian Association ("YMCA") propose to serve family and senior households at Nelson Park apartment site. CMHA has formed a formal relationship with YMCA, which has extensive experience providing supportive services to residents of permanent supportive housing.

The development team's goal in serving this population is to enable the residents to pursue economic self-sufficiency, while providing an atmosphere conducive to the highest quality of life. The development team will require the following of Nelson Park residents:

- Qualify as extremely or very low income (at or below 30% and 50% of median income), or low income (typically at or below 60% of median income);
- Be homeless or at-risk of homelessness if applicable for the unit type;
- Under/Over-housing is not occurring, housing is appropriate for the member(s) of the household, and that when appropriate and eligible, receive rental assistance; and
- Be capable of meeting the essential terms of the lease, with or without supportive services.

Number of Units to be Set-Aside

100% of the 137 units at Nelson Park will be affordable under the low-income housing tax credit program (no "market rate" units). Additionally, 14-40 units will be designated as permanent supportive housing units.

II. ONSITE CASE MANAGEMENT

Role of the Case Manager

Case Management services will be available to residents living in Nelson Park's permanent supportive housing units. The Case Manager is a service

manager, connecting residents and their families with outside service agencies. The Case Manager and the on-site property manager will work in conjunction with each other to encourage independence and establish a supportive environment through community outreach and resident empowerment. The Case Manager role will be contractually placed under the administration and oversight of CMHA. YMCA, an experienced local service provider, particularly focused on catering to the needs of the individuals to be housed within the development, will directly provide many of the services. CMHA will also coordinate access to additional services offerings available through other qualified and experienced third-party organizations as may be determined necessary.

Job Description

The Case Manager for Nelson Park will work in conjunction with nonprofit partners to provide the coordination aspect for all services – primarily those provided directly by YMCA, as well as additional services offerings available through other area agencies, faith-based institutions, or houses of worship.

Annual Budget

With the proposal to develop 14-40 units of permanent supportive housing, CMHA and YMCA anticipate the need for a Case Manager to be on-site at least forty (40) hours per-week. The salary for the Case Manager will be covered by funding from the local Continuum of Care to deliver comprehensive services specific to the population of the proposed development for the duration of the compliance period. CMHA will also charge the property \$125 per unit per year to provide service coordination to the non-Permanent Supportive Housing units.

The common space located in the new community building at the property will include shared offices for staff and administration. The Case Manager will access the office materials, furniture, equipment, and supplies within the general office space.

CMHA recognizes the reality of increased financial restrictions on conventional service delivery systems funded through government entitlement programs. Traditional government agencies are providing fewer service dollars to support more people resulting in long waiting lists of needy families. Beyond the annual supportive service fees provided within the project budget, the Case Manager will be encouraged and trained to seek creative and non-traditional avenues of service delivery systems where necessary. CMHA will be asked to review and provide direction regarding budget as needed on an annual basis. CMHA has a long track record in supportive service coordination, and YMCA has a long history of funding its programming through major grants, fundraising and receiving operating support from various public and private entities.

Additionally, YMCA has a successful history with Medicaid billing and utilization.

Description of Services

The onsite Case Manager's initial focus will be on assisting residents with basic needs such as food, clothing, and medical care. Once residents' basic needs have been met, the Case Manager will work with residents to create individualized supportive services plans and regularly assess plans to ensure effectiveness. Nelson Park will offer a range of supportive services including service engagement, case management, mental health and psychiatric services, pre-treatment and off-site AOD treatment, medication monitoring, health and dental care, direct client assistance, benefits enrollment, vocational and employment services, and transportation. YMCA will also refer residents to off-site services when needed. Examples include but are not limited to nutritional, educational, employment, health and wellness, safety and transportation programs offered by local nonprofit organizations.

Due to the diverse household makeup found in CMHA family communities Nelson Park's Case Manager will be prepared to offer services to residents of all ages and stages of life. Outside of traditional service coordination needs, residents of CMHA family communities may also benefit from assistance with coordinating workforce development opportunities, job searches, out of school time programming, parenting resources, and adult and youth educational opportunities.

Transportation

Transportation services will be available to residents on a pre-scheduled basis at no charge for residents through a third-party transportation company. Transportation will be available to residents on a regularly scheduled basis to allow residents to participate in outings such as shopping and socialization trips. If a shuttle bus is already scheduled to do a pickup at the site/drop-off, additional requests can be made up until the day/time of pickup on a first-come first served basis and as passenger space permits. Residents will be able to schedule such trips through Nelson Park's onsite Case Manager.

Safety/Security

CMHA and the onsite Case Manager, will work with the City of Columbus Police Department and the City of Columbus Fire Department & Rescue Squad to assist in developing a Block Watch and EMS Safety Program at Nelson Park. Resident Block Watch meetings will be regularly scheduled with participation from the Police Department.

Additionally, Nelson Park will have a property manager onsite at all times who will be available 24/7 to assist tenants with immediate concerns and provide crisis intervention and conflict resolution as needed.

Social and Recreational Activities

The onsite Case Manager will be responsible for coordinating activities held within the community. These activities are important to build community among residents and provide additional "enrichment" opportunities. Where possible, activities will be open to members of the surrounding community to maintain the building residents' connection to the neighborhood and to smooth the transition of neighborhood residents who are contemplating moving to the community.

V. SERVICE COORDINATION

In addition to the Case Management services available to residents of Nelson Park's permanent supportive housing units, all residents of the project will have access to service coordination through CMHA's Resident Initiatives department. To deliver Service Coordination to residents of Nelson Park, CMHA's Resident Initiatives department will make the following personnel available to meet the needs of the community: one Resident Services Coordinator, two Family Self Sufficiency Coordinators, one – two Social Work Interns, and up to four AmeriCorps VISTA Members. This team will be available to receive requests for service referrals directly from residents, as well as property management. CMHA also has an extensive partnership network of local not-for-profit and government organizations, which will provide additional supports to residents of the project. CMHA has more than 20 years' experience in providing supportive services to households at or below 30% AMI up to 80% AMI. This expertise makes CMHA a perfect fit to coordinate supportive services for the Project. CMHA will make Service Coordination available to residents of the Project for the entirety of the 15-year Tax Credit compliance period, which includes, but is not limited to, the services listed in Section IV.

Description of Services

The purpose of CMHA's Service Coordination program is to link residents of the Project to valuable community resources that promote housing stability, including but not limited to, resources that assist residents with their finances, education, employment, and health. CMHA's Service Coordination program will consist of both direct CMHA support staff to link residents to needed services, as well as a larger Service Provider Network, consisting of local not-for-profit and government agencies, which CMHA will coordinate in an effort to bring the most effective and relevant services to the Project. These partners will provide on-site programming for the community, such as job fairs, health screenings, and educational events.

CMHA will also work with the Central Ohio Pathways HUB, which is a convener of direct service providers, and managed by the Healthcare Collaborative of Greater Columbus. The HUB currently coordinates services through ten Care Coordination Agencies (CCA's), and their employed community health workers (CHW's) to provide comprehensive risk assessments and risk mitigation in the healthcare, social, behavioral, economic spheres for individuals and families engaged at the Project. Through a partnership with CMHA, these CHW's will provide supplemental supports to the Project.

CMHA's Service Provider Network will allow residents of the Project to be connected to the most appropriate partner to meet a family's individualized needs, instead of applying a one size fits all approach to the provision of healthcare and social services.

Residents of the Project will have access to a variety of social services intended to enhance and improve quality of life, including but not limited to:

- Credit and budget counseling
- Job search assistance
- Workforce development services
- Continuing adult education
- Out of school time programs for youth
- Scholarship programs
- Access to health Insurance and healthcare resources
- Parenting resources
- Emergency financial assistance
- Emergency utility assistance
- Applying for public assistance

In addition to the previously mentioned services, residents of the project will also have access to other CMHA programs, including but not limited to:

Resident Council

The Resident Council Program is designed to build strong leadership for CMHA Resident Councils. CMHA will assist interested residents in forming a Resident Council in their community. CMHA will provide the Resident Council with training opportunities, including but not limited to, leadership and administrative skill development, conflict resolution, consensus building, volunteer recruitment and management, fundraising, and meeting management. Resident Councils work in partnership with their community to facilitate onsite programming that improves quality of life.

Community Engagement

CMHA aspires to create desirable communities for its residents to live in. CMHA does this by partnering with resident councils, property management, and local agencies, to facilitate community events that provide residents with an opportunity to engage with one another. Community events provide CMHA with an opportunity to engage its residents, for the purpose of promoting prosocial activities and relationship building in and around CMHA communities. Community events also provide CMHA with feedback regarding residents' overall experience living in a CMHA community, including their perception of safety, their management company, and Resident Services.

CMHA RISE Center

CMHA's RISE Center (Resident Initiatives for Success and Empowerment) is a one-stop social services center, where CMHA residents can go to receive services that promote economic self-sufficiency. The RISE Center houses various local agencies that have a shared mission of increasing access to needed supportive services in underserved areas. The RISE Center is conveniently located at 1407 Cleveland Ave, Columbus, OH 43211, just across the street from CMHA's main administrative office, and is open Monday through Friday during CMHA's normal business hours.

This RISE Center provides office space to CMHA staff and community partners that can provide additional supports to the residents of the Project. Residents can request an appointment for services, or simply walk-in to be seen. Because the RISE Center is located across from CMHA, residents can come over before or after their recertifications, which will save them from having to make multiple visits to the area.

VII. EVALUATION

Further Plans to Meet the Needs of the Residents

The resident manager at Nelson Park will utilize an annual resident questionnaire to determine what specialized needs a resident might exist or what programming may be lacking.

Methods to Monitor and Evaluate Service Delivery Outcomes

The onsite Case Manager and CMHA's Resident Initiatives department will collect robust data to monitor the effectiveness of services rendered, identify opportunities for improvement, and adapt offerings to meet resident's evolving needs. Measures reported shall reflect assessment of productivity, efficiency and quality of delivery and quality of effectiveness or produced change of each program or service. Measures for participating residents will be compared to

baseline data to determine whether or not anticipated outcomes are achieved. Measures will include but are not limited to:

- #/% of residents that receive Case Management services
- # and type of needs assessments completed
- # and type of services started
- # and type of services completed
- Average number of days to complete a service
- #/% of residents receiving public assistance
- #/% of residents that gain public assistance
- #/% of households whose income from public assistance increased
- #/% of employed residents
- # of households who gain employment
- # of households whose income from employment increased
- #/% of residents that have a primary care physician
- # of residents that find a primary care physician
- #/% of residents that had preventative care in the last 12 months
- #/% of residents that have health insurance
- # of community events held
- # of residents that attended community events
- # of resident volunteers that assisted with community events
- % of residents that feel safe in their neighborhood
- # of lease violations responded to
- # of lease violations resolved
- # of evictions resolved
- # of residents that enroll in a utility bill assistance program

Long-Term Commitment to Service Coordination

The collective core values of CMHA and YMCA reflect our commitment to serving the families at Nelson Park for the life span of the project. The proposed Nelson Park development has willingly agreed to demonstrate a commitment, in this case specifically YMCA, as an experienced local or regional service provider, to partner to deliver comprehensive services specific to the population of the proposed development for the duration of the compliance period.

Community

Environmental Justice

This section shows indexes from EJScreen, EPA's screening tool for environmental justice (EJ) concerns. EPA uses these indexes to identify geographic areas that may warrant further consideration or analysis for potential EJ concerns. Use of these indexes does not designate an area as an "EJ community" or "EJ facility." EJScreen provides screening level indicators, not a determination of the existence or absence of EJ concerns. For more information, see the EJScreen home page.

Superfund Proximity	60	74
Underground Storage Tanks (UST)	44	66
Wastewater Discharge	80	94

Facility 1-mile Radius Facility Census Block Group

Demographic Profile of Surrounding Area (1-Mile Radius)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 U.S. Census and 2017 - 2021 American Community Survey (ACS) 5-year Summary and are accurate to the extent that the facility latitude and longitude listed below are correct. EPA's spatial processing methodology considers the overlap between the selected radii and the census blocks (for U.S. Census demographics) and census block groups (for ACS demographics) in determining the demographics surrounding the facility. For more detail about this methodology, see the DFR Data Dictionary <<https://epa.gov/help/reports/dfr-data-dictionary#demographic>>.

General Statistics (U.S. Census)		Age Breakdown (U.S. Census) - Persons (%)	
Total Persons	35	Children 5 years and younger	4 (11%)
Population Density	12/sq.mi.	Minors 17 years and younger	10 (29%)
Housing Units in Area	13	Adults 18 years and older	25 (71%)
		Seniors 65 years and older	2 (6%)
General Statistics (ACS (American Community Survey))		Race Breakdown (U.S. Census) - Persons (%)	
Total Persons	429	White	28 (80%)
Percent People of Color	42%	African-American	7 (20%)
Households in Area	154	Hispanic-Origin	0 (0%)

COLUMBUS PUBLIC WATER SYSTEM	
COLUMBUS, OH 43215	
614-645-8460	
Primary Water Source Type	Population Served
Surface water	1277848
This report was created on Nov 13, 2023 Results are based on data extracted on	

NOTICE: EPA is aware of inaccuracies and underreporting of some data in the Safe Drinking Water Information System. We are working with the states to improve the quality of the data.

The tables below list all violations that the state reported to EPA for this water system. Health-based violations are listed first, followed by monitoring, reporting, and other violations.

Health Based Violations: amount of contaminant exceeded safety standard (MCL) or water was not treated properly.

Type of Violation	Compliance Period Begin Date	Compliance Period End Date	Drinking Water Rule or Contaminant	Analytical Result	Violation ID
MCL, Average	Jun 01, 2016	Jun 30, 2016	Nitrate < https://www.epa.gov/your-drinking-water/table-regulated-drinking-water-contaminants >	10.5	8528519

Follow-up Action	Date of Response
St Compliance achieved	Nov 01, 2016
St Public Notif received	Jul 08, 2016
St Violation/Reminder Notice	Jun 30, 2016
St Public Notif requested	Jun 30, 2016

Type of Violation	Compliance Period Begin Date	Compliance Period End Date	Drinking Water Rule or Contaminant	Analytical Result	Violation ID
-------------------	------------------------------	----------------------------	------------------------------------	-------------------	--------------

MCL, Average	Jun 01, 2015	Jun 30, 2015	Nitrate < https://www.epa.gov/your-drinking-water/table-regulated-drinking-water-contaminants >	11	8528516
-----------------	-----------------	-----------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----	---------

Follow-up Action	Date of Response
St Compliance achieved	Jun 17, 2015
St Public Notif received	Jun 17, 2015
St Violation/Reminder Notice	Jun 09, 2015
St Public Notif requested	Jun 09, 2015

Monitoring and Reporting and Other Violations: system failed to complete all samples or sample in a timely manner, or had another non-health-based violation. A significant monitoring violation means the system failed to take a large percentage of the required samples. Non-significant monitoring violations indicate that the water system failed to take some of the required samples, but did do some of the required sampling.

No monitoring or other violations found. EPA has no record of monitoring or other violations reported by the state for this water system (Violations within the last 10 years are included in this report).

Drinking water in your state

Drinking water in general: Visit EPA's Office of Ground Water and Drinking Water <<https://www.epa.gov/aboutepa/about-office-water#ground>> web site or call the Safe Drinking Water Hotline (1-800-426-4791). EPA has also prepared information <<https://www.epa.gov/your-drinking-water/table-regulated-drinking-water-contaminants>> about various regulated drinking water contaminants.

Advanced tools for accessing EPA drinking water data: <https://www.epa.gov/waterdata/drinking-water-tools> <<https://www.epa.gov/waterdata/drinking-water-tools>>

Research Data: As well as monitoring the levels of drinking water contaminants for which EPA has set standards, EPA, states, and water systems also carry out studies of contaminants that may need to be regulated in the future. For more information about these, please see the National Contaminant Occurrence Database <<https://www.epa.gov/dwucmr/national-contaminant-occurrence-database-ncod>> and the

Microbe and Disinfection Byproducts <https://archive.epa.gov/enviro/html/icr/web/html/icr_query.html> study database.

Additional Information

In fiscal year 2005 (the last year for which EPA has complete data) based on information reported to EPA by the states, 1.5 percent of all systems reported a treatment technique violation, 6.1 percent of all systems reported an MCL violation, and 24 percent of all systems reported a reporting/monitoring violation.

Water for Living

Drinking Water
Consumer Confidence Report (CCR)
City of Columbus, Ohio

HOW TO CONTACT US

For additional information or questions about Columbus water quality please call the Water Quality Assurance Lab at 614-645-7691, or visit our website at columbus.gov/drinkingwater/.

For questions involving billing, accounts, service calls, bill payments, and additional CCR copies please contact Customer Service at: 614-645-8276.

For questions involving water emergencies, waterline breaks, hydrant damage or leaks, please contact Distribution Maintenance at: 614-645-7788.

The Sewer and Water Advisory Board meetings are open to the public. Call 614-645-6141 for a schedule of meeting times and dates.

Call 311 for city services or 614-645-3111, or visit the web at columbus.gov/311/.

THE CITY OF
COLUMBUS^{*}

ANDREW J. GINTHER, MAYOR

DEPARTMENT OF
PUBLIC UTILITIES

Division of Water
910 Dublin Road
Columbus, OH 43215

columbus.gov/utilities/

The City of Columbus has a current, unconditioned license to operate our public water system.

YOUR 2022 WATER QUALITY REPORT

The goal of the Division of Water is to ensure that any contaminants in your drinking water are restricted below a level at which there is no known health risk. This report shows the types and amounts of key elements in your water supply, their likely sources and the maximum contaminant level (MCL) that the EPA considers safe. The water delivered to your home meets ALL of the requirements of the Safe Drinking Water Act (SDWA). We use a complex multi-barrier treatment process to assure safe drinking water is delivered to our customers. If for any reason the standards are not met, the public will be notified.

Please share this information with other people who drink this water, especially those who may not have received it directly (for example, people in apartments, nursing homes, schools and businesses). You can do so by posting this report in a public place or distributing copies by hand or mail. You can request additional copies by calling customer service at 614-645-8276, emailing WaterQuality@columbus.gov, or online at columbus.gov/Water-CCR/.

WATER QUALITY ASSURANCE

The City of Columbus' Water Quality Assurance Laboratory (WQAL) is a large modern water lab with a long history of distinguished public service starting under the noted water quality chemist Charles Hoover. The lab continues to maintain that tradition of excellence and technical innovation in the ongoing use of state-of-the-art equipment for water analysis, while continuing to research the latest advancements in water treatment techniques.

The WQAL performs water quality monitoring and treatment research to ensure that Columbus' drinking water meets or is better than all federally mandated Safe Drinking Water Act (SDWA) standards. The WQAL also provides water quality information to the water plants and addresses customer complaints and inquiries regarding water quality. In 2022, the WQAL's EPA licensed and certified laboratory staff completed over 70,000 analyses relating to 33 different organic, inorganic, and microbiological water quality parameters.

To maintain compliance with current SDWA regulations, WQAL activities in 2022 were again directed at the National Primary Drinking Regulations, the Interim Enhanced Surface Water Treatment Rule, the Lead and Copper Rule, the Unregulated Contaminant Monitoring Rule (UCMR), Stage 2 of the Disinfectant/Disinfection Byproducts Rule (D/DBP), and the Long Term 2 Enhanced Surface Water Treatment Rule (LT2ESWTR). Additionally, the lab has been closely involved in planning the improvement of watershed and water distribution system surveillance and detection measures for security concerns and to maintain heightened security protocols.

As with the WQAL staff, the State of Ohio licenses and certifies the water plant operators who are charged with running and maintaining each of the three water plants. These operators also perform the critical task of treatment and process monitoring to insure that the water leaving the plant is of the highest quality. In order to stay current in the ever-changing technical field of water purification, these operators spend many hours of continuing education in the classroom every year.

These operators, the Water Quality Assurance Laboratory staff, and all of the Division of Water employees are dedicated to providing WATER, a life-sustaining resource, for the well-being and economic vitality of the community. This is our mission.

30% Post Consumer Waste

EPA's National Primary Drinking Water Regulation for Consumer Confidence Reports requires that we produce and deliver this report to all of our customers annually.

SOURCE WATER ASSESSMENT INFORMATION

A high-quality source water supply allows the Division of Water to provide consumers with quality water at a reasonable cost. Protecting our raw water sources requires investments to secure the needs of a growing population, now and in the future. As part of its ongoing efforts to maintain regulatory compliance and monitor our water supply, the Division of Water has completed two Source Water Assessment Plans – one for groundwater and one for surface water. Both plans are endorsed by the Ohio Environmental Protection Agency (OEPA) as an effective source water protection strategy. Below is a synopsis of the results.

The City of Columbus water system uses surface water from the Scioto River and Big Walnut Creek, as well as ground water pumped from sand and gravel deposits of the Scioto River Valley. All three sources of water have a relatively high susceptibility to contamination from spills or releases of chemicals. The ground water pumped at the Parsons Avenue plant is susceptible (compared to other ground water systems) because there is no significant clay overlying and protecting the aquifer deposits. The Scioto River and Big Walnut Creek are even more susceptible because they are more accessible and less protected from spills.

The drinking water source protection areas for the City of Columbus' three water sources contain numerous potential contaminant sources, especially the protection area for the Dublin Road Water Plant (extending along the Scioto River). These include industrial activities, storm water runoff from developing areas, and a heavily traveled transportation network running alongside and over the water bodies. Run-off from agricultural fields is a concern in both the Scioto River and Big Walnut Creek watersheds.

The City of Columbus treats the water to meet drinking water quality standards, but no single treatment protocol can address all potential contaminants. The City has been proactive in pursuing measures to further protect its source waters. These include land stewardship programs and incentive-driven programs to reduce erosion and run-off of pesticides and fertilizers into the Scioto River and Big Walnut Creek and their reservoirs. A summary of Columbus' Drinking Water Source Assessment Report can be viewed by calling the Watershed section at 614-645-1721. Visit columbus.gov/watershed/ for more details about watershed management and the land stewardship program.

Less than 1% of the world's fresh water supplies are available for human consumption.

THE WATER TREATMENT PROCESS

The City of Columbus, Division of Water uses a complex multi-barrier approach utilizing state of the art equipment and the latest treatment technologies.

Water flows (1) to the treatment plant from the reservoir or stream through rotating screens (2) to remove large debris. It is then pumped into the plant where alum is added (3) to cause coagulation. After rapid mixing, the water remains in the settling basin (4) while sedimentation of floc occurs (2-4 hours). The water treatment residuals (settled floc) are pumped from the bottom of the pools and stored in holding lagoons to dry.

The softening process (5) involves the addition of sodium carbonate (soda ash) or caustic soda and hydrated lime to remove calcium and magnesium ions that are responsible for water hardness. This process takes an additional 2-4 hours. For each pound of chemical used in the treatment process, two pounds are removed.

After an additional sedimentation process, carbon dioxide is added (6) to lower the pH level to approximately 7.8. Ozone is then added to the water to reduce dissolved organic matter (7). Water then flows through large biologically active filters made up of granular activated carbon (8) to remove any remaining particles and further reduce dissolved organic matter. After the biologically active filters, the water flows through UV contactors where UV light is used to disinfect the water (9).

Addition of chlorine to disinfect the water, fluoride as required to protect teeth, and a corrosion inhibitor take place at the end of the process (10) before water enters large underground clearwells (11) to be held until needed by the community (12).

Please note: When ground water is used (as in the case of the Parsons Avenue Water Plant), screening (2), initial sedimentation (3, 4), ozone (7), and UV disinfection (9) are not needed.

WHAT'S NOT IN YOUR WATER

Reports in the media often raise concerns about the health risks associated with the presence of certain minerals, chemicals, or other contaminants in your food or water. The Columbus Division of Water performs tens of thousands of tests each year to ensure drinking water quality. Many substances for which the division tests never appear in this report because they are not found in the drinking water. For example, there are 51 volatile organic chemicals as well as arsenic, perchlorate, asbestos, MTBE, radium 228, Legionella, microcystins, mercury, 1,2,3-trichloropropane (TCP) and ammonia (just to name a few) that are NOT found in your drinking water.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include: microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, USEPA prescribes regulations which limit the amount of certain contaminants in drinking water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

LEAD IN THE HOME

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Columbus is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for thirty seconds to three (3) minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested.

A list of laboratories certified in the State of Ohio to test for lead may be found at epa.ohio.gov/divisions-and-offices/drinking-and-ground-waters/public-water-systems/monitoring-and-reporting or by calling 614-644-2752. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 1-800-426-4791 or at epa.gov/safewater/lead.

The lead concentration in the drinking water leaving our water plants is below the level of detection. Most homes in the Columbus area do not have lead service lines and have little to no detectable levels of lead in their tap water.

You can also call 614-645-8276 for your free copy of "Reducing Exposure to Lead in Water." This information can also be found online at columbus.gov/LeadinWater/. Our lead program is being used to meet a portion of the notification requirements of OAC Rule 3745-83-02.

PROTECTING OUR WATER FROM BACKFLOW

Homes with underground irrigation systems and most non-residential buildings are required by the Division of Water to have a backflow prevention device. These backflow devices protect the public water system from any potentially contaminated water flowing back into the public system from a customers' plumbing. Some examples requiring backflow systems include: swimming pools, restaurants, medical facilities, laboratories, car washes, automotive shops, industrial sites and property with a well or pond.

A cross-connection is a physical connection between a possible source of contamination and the drinking water system piping. If the pressure of the source of contamination is greater than the water system pressure, contaminated water may backflow into the drinking water system. Pressure drops in the public water system caused by water line breaks, pump failures, and fire-fighting can also cause a backflow situation. If our rules and regulations require a backflow preventer, it must be tested annually by a tester you hire who is approved by our office. Additional information is on our website at columbus.gov/backflow/.

HEALTH CONCERNS

Columbus' water is regularly tested for organisms that could be harmful to people – including *Cryptosporidium*. Crypto was detected 4 out of 12 times in the Scioto River and 5 out of 9 times in Big Walnut Creek. Crypto was not detected in either the DRWP tap water or the HCWP tap water. PAWP source water is groundwater and is not impacted by surface water contaminants like Crypto.

Cryptosporidium is a microbial pathogen found in surface water throughout the U.S. Although filtration removes *Cryptosporidium*, the most commonly used filtration methods cannot guarantee 100% removal. Monitoring of source water indicates the presence of these organisms. Current test methods do not enable us to determine if the organisms are dead or if they are capable of causing disease.

Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can overcome the disease. However, immunocompromised people are at greater risk of developing life-threatening illness. We encourage immunocompromised individuals to consult their doctor regarding appropriate precautions to take to avoid infection. *Cryptosporidium* must be ingested to cause disease and it may be spread through means other than drinking water.

Columbus has a multi-barrier approach to disinfection utilizing both chemical and physical disinfection treatment. Chlorine is used as the primary and secondary disinfectant to kill disease-causing organisms, which includes viruses and Giardia. Ultraviolet (UV) light disinfection was recently added for additional disinfection at both DRWP and HCWP. UV disinfection is effective at inactivating *Cryptosporidium*.

NEWBORNS AND NITRATE

Nitrate in drinking water at levels above 10 ppm is a health risk to infants less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, you should ask for advice from your health care provider.

Seasonally, the Scioto River can experience elevated levels of nitrate due to agricultural runoff. To reduce the health risk to infants the City of Columbus added a treatment process, called anion exchange, to the Dublin Road Water Plant to remove nitrate. Anion exchange works like a water softener and pulls nitrate from the water as it flows through a bed of resin beads. Extensive water quality testing in the watershed upstream of the water plant by the Water Quality Assurance Laboratory helps to determine when we need to turn on the anion exchange system. Then additional water quality testing of the finished drinking water confirms that the nitrate level has been reduced below 10 ppm and is safe for infants.

Additional information about nitrates can be found online at columbus.gov/Nitrate/.

TOTAL ORGANIC CARBON

The value reported under "Level Found" for Total Organic Carbon (TOC) is the lowest running annual average ratio between the percentage of TOC actually removed to the percentage of TOC required to be removed. A value of greater than one indicates that the water system is in compliance with TOC removal requirements. A value of less than one indicates a violation of the TOC removal requirements. The value reported under "Range" for TOC is the lowest monthly ratio to the highest monthly ratio.

TURBIDITY

Utilities that treat surface water and/or filter the water are required to monitor for turbidity, which is a measure of the cloudiness of water and is an indication of the effectiveness of our filtration system. The turbidity limit set by the EPA is 0.3 NTU in 95% of the samples analyzed each month, shall not exceed 1 NTU at any time. The highest recorded turbidity for HCWP was 0.50 NTU and the lowest monthly percentage of samples meeting the standard was 100%. The highest recorded turbidity for DRWP was 0.18 NTU and the lowest monthly percentage of samples meeting the standard was 100%.

PFAS

Per- and Polyfluoroalkyl Substances (PFAS) are a group of man-made chemicals applied to many industrial, commercial and consumer products to make them waterproof, stain resistant, or nonstick. They are used in products like cosmetics, fast food packaging, and a type of firefighting foam called aqueous film forming foam (AFFF), which are used mainly on large spills of flammable liquids, such as jet fuel. PFAS are classified as contaminants of emerging concern, meaning that research into the harm they may cause to human health is still ongoing.

Although it is not required by Ohio EPA, Columbus has been testing for PFAS compounds in your drinking water to be proactive and protective of public health. Several PFAS compounds have been found at very low levels, near the detection limits of the test. All the results to date have been well below the action level established by Ohio EPA.

Currently USEPA is developing a draft drinking water regulation for two PFAS compounds, PFOS and PFOA. According to the USEPA PFAS Strategic Roadmap, a new MCL should be proposed in 2023. For more information about PFAS, please visit the Ohio EPA PFAS in Drinking Water at epa.ohio.gov/monitor-pollution/pollution-issues/per-and-polyfluoroalkyl-substances-pfas.

REGULATED CONTAMINANTS											
Substances we detected (units)	When we checked	What's allowed? (MCL)	What's the goal? (MCLG)	Dublin Road Water Plant		Hap Cremean Water Plant		Parsons Avenue Water Plant		Violation?	Where did it come from?

DEFINITIONS AND TERMS

Action Level (AL) The concentration of a contaminant, which if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant The level of a contaminant in drinking water, below which there is no known or expected health risk. MCLGs allow for a margin of safety.

Maximum Contaminant Level The highest level of contaminant that is allowed in drinking water. MCLs are set as close to the MCLG as feasible using the best available treatment technology.

Secondary MCL (SMCL) A nonenforceable numerical limit set by the USEPA for a contaminant on the basis of aesthetic effects to prevent an undesirable taste, odor, or appearance.

N/A Not Applicable.

ND No Detect.

NTU Nephelometric Turbidity Unit (a measure of particles held in suspension in water).

Parts per Trillion (ppt) or..... Are units of measurement for concentration of a contaminant.

Nanograms per Liter (ng/L) A part per trillion corresponds to about thirty seconds out of every 5 million years.

Parts per Billion (ppb) or Are units of measurement for concentration of a contaminant.

Micrograms per Liter (ug/L)..... A part per billion corresponds to one second in roughly 31.7 years

Parts per Million (ppm) or..... Are units of measurement for concentration of a contaminant.

Milligrams per Liter (mg/L) A part per million corresponds to one second in roughly 11.5 days.

Grains per Gallon (gpg) A non-metric unit of measurement for hardness used in North America.

Microsiemens per Centimeter (uS/cm) Are units of measurement for electrical conductivity. Freshwater is usually between 0 and 1,500 uS/cm, while sea water has a conductivity value of about 50,000 uS/cm.

MRDL..... Maximum Residual Disinfectant Level: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG Maximum Residual Disinfectant Level Goal: The level of drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

The ">" symbol This symbol means "greater than."

The "<" symbol This symbol means "less than." For example, a result of < 5 means that the lowest level that could be detected was 5 and the contaminant in that sample was not detected

Per- and polyfluoroalkyl..... PFAS are a group of man-made chemicals applied to many industrial, commercial and consumer products to make them waterproof, stain resistant, or nonstick. PFAS are also used in products like cosmetics, fast food packaging, and a type of firefighting foam called aqueous film forming foam (AFFF) which are used mainly on large spills of flammable liquids, such as jet fuel. PFAS are classified as contaminants of emerging concern, meaning research into the harm they may cause to human health is still ongoing.

Treatment Technique (TT) A required process intended to reduce the level of a contaminant in drinking water. For Total Organic Carbon (TOC) the level must be above 1. For turbidity the level must be under 0.3 NTU 95% of the time, and always < 1 NTU.

Turbidity A measurement of the cloudiness of the water. We monitor turbidity because it is a good indication of water quality and the effectiveness of our treatment process.

WATER SERVICE AREA MAP

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. Each home, school and business in the greater Columbus area receives water from one of the following three water plants.

- Dublin Road Water Plant (DRWP) serves northwestern and southwestern residents using water from Griggs and O'Shaughnessy Reservoirs.
- Hap Cremean Water Plant (HCWP) serves OSU and northern residents. The water source is the Hoover Reservoir.
- Parsons Avenue Water Plant (PAWP) draws water from wells and serves residents in the southeast.

COTA SYSTEM MAP

SERVICE TYPE *frequency legend*

- STANDARD**
Serving you throughout the day
Departure times are >15 to 60 minutes apart
- FREQUENT**
Serving you throughout the day
Departure times are every 15 minutes or less
- RUSH HOUR**
Serving you Monday-Friday between
6:30-9 a.m. and 3-6 p.m.

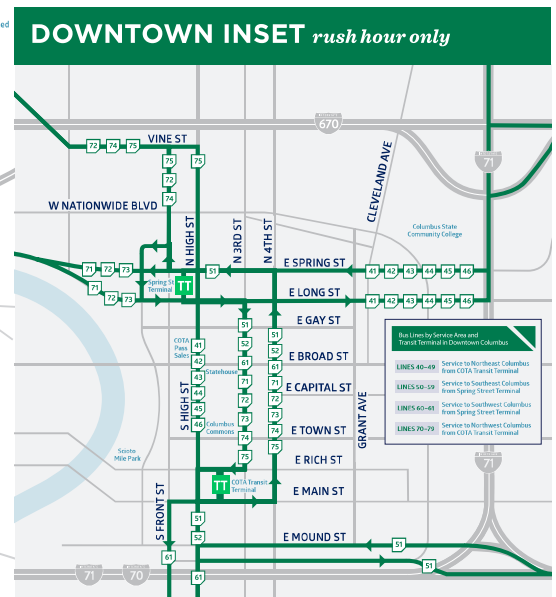

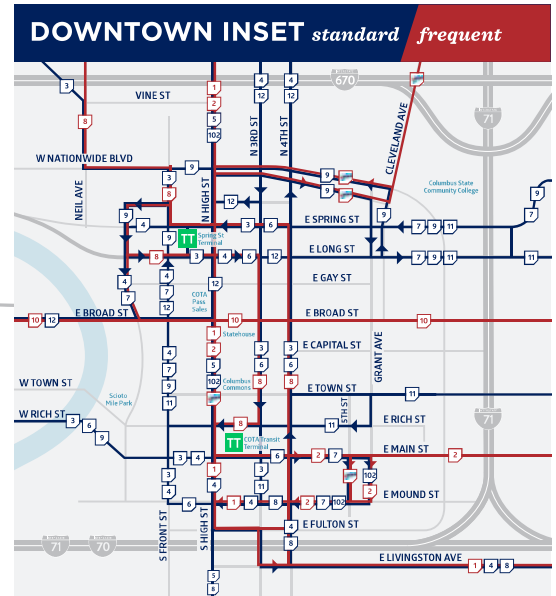

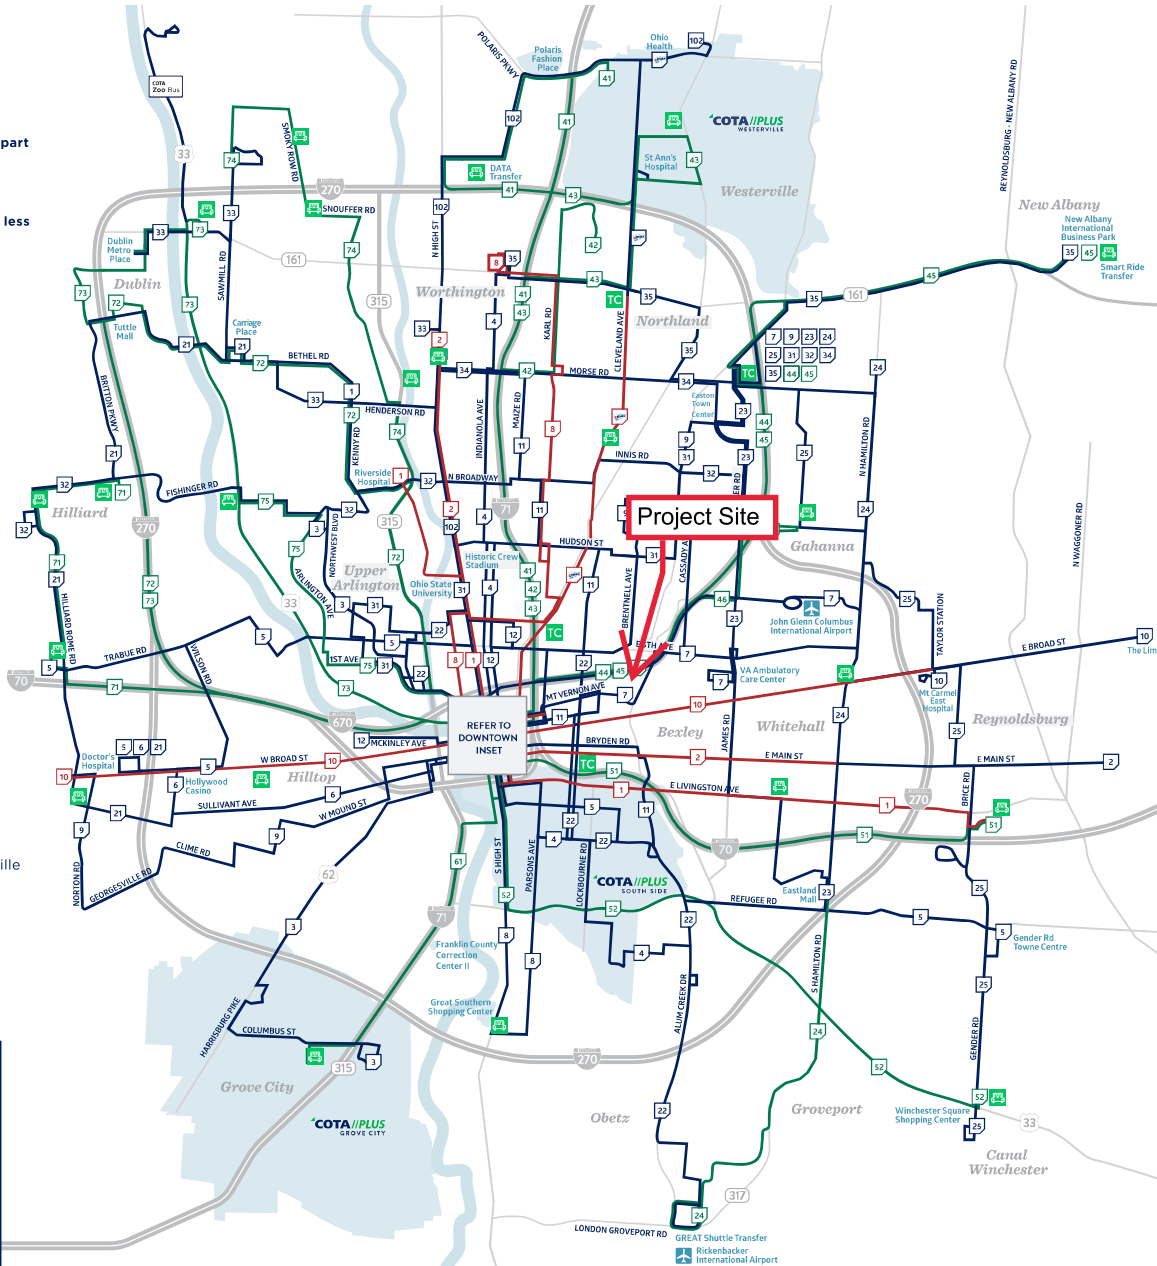

SERVICE LINES *by service area*

- LINE 1-19** Run through Downtown
- LINE 20-29** Run in the North & South Direction
- LINE 30-39** Run in the East & West Direction
- LINE 40-49** Serve Northeast Columbus
- LINE 50-59** Serve Southeast Columbus
- LINE 60-69** Serve Southwest Columbus
- LINE 70-79** Serve Northwest Columbus
- LINE 102** Runs North & South, Downtown to Polaris
- CMAX** Runs North & South along Cleveland Ave., Downtown to Westerville

Nelson Park Apartments (22-0267) Franklin Co., Columbus, OH
Groundwater Resources Map

7D Buried Valley

This hydrogeologic setting varied considerably across Franklin County. The buried valleys were created by pre-glacial or interglacial rivers which downcut into the bedrock. The differing glacial deposits filling these valleys can be best illustrated by describing the two common forms mapped within Franklin County.

One common form of buried valley deposit (Block Diagram a) is exemplified by the southern portion of the Scioto River and Big Walnut Creek Valleys. These valleys are occupied by a modern river and floodplain, and contain numerous outwash terraces and small kames. The upper portions of these valleys contain 50 to 100 feet of outwash. Depth to water is less than 30 feet. Yields over 1,000 gpm are possible from large-diameter wells. Soils are typically loams. The streams are in direct hydraulic connection with the aquifer and recharge is high. GWPP index values for these settings are usually over 160.

The other common form of buried valley is typified by the large valleys extending into Licking County and deep valleys east of Big Darby Creek. The surface topography is flat ground moraine and it is hard to distinguish these areas from ground moraines with shallow depth to rock. They usually lack streams or contain intermittent streams. The aquifer consists of thinner, less discontinuous lenses of sand and gravel interbedded in thick sequences of till or fine lacustrine sediments. Yields are commonly less than 25 gpm. Soils are typically clay loams. Recharge is moderate to low. GWPP index values for these settings are typically less than 100.

Setting: 7D132		GENERAL

ODNR Environmental Review Program

Via email: environmentalreviewrequest@dnr.state.oh.us

Re: Request for Environmental Review
Nelson Park Apartments
Columbus, Franklin County, Ohio

To Whom It May Concern:

On behalf of the Ohio Department of Development, Crawford, Murphy & Tilly, Inc. requests an Environmental Review of the proposed substantial rehabilitation of the existing 177 units of multi-family and senior housing in 47 buildings in Columbus, Franklin County, Ohio. The project will renovate the existing complex resulting in 137 units in 41 buildings. The project will receive federal HOME funds distributed by the Ohio Department of Development (ODOD) and is currently in the application process for City HOME funds distributed by the City of Columbus.

Nelson Park Apartments involves the acquisition and rehabilitation of an existing 177-unit affordable housing development in Columbus's Eastgate neighborhood. The site is currently developed with 47 two-story residential buildings and a maintenance building. A portion of the site in the northwestern corner of the project contains a one-story brick utility building that is not owned by the project team. There are trees and shrubs that are scattered throughout the site. No streams, wetlands, or forested areas are mapped on the project site. The nearest surface water, Alum Creek, is located approximately 340 feet east of the project site. No tree clearing is anticipated as part of the project.

Attached to this email please find shapefiles for the project site, county and USGS topographic location maps, photographs of the project site and surroundings, and the project site plan. A copy of this letter and ODNR's response will be placed in the environmental review record for the proposed project to document coordination with the state division of wildlife.

Please contact me at 614-468-1211 or via email at atadda@cmtengr.com if you have any questions or concerns.

Sincerely,

Crawford, Murphy & Tilly, Inc.

Re: 23-0738; Nelson Park Apartments

Project: The proposed project involves the rehabilitation of the existing 177 units of multi-family and senior housing within 47 buildings, resulting in 137 units in 41 buildings.

Location: The proposed project is located in the City of Columbus, Franklin County, Ohio.

The Ohio Department of Natural Resources (ODNR) has completed a review of the above referenced project. These comments were generated by an inter-disciplinary review within the Department. These comments have been prepared under the authority of the Fish and Wildlife Coordination Act (48 Stat. 401, as amended; 16 U.S.C. 661 et seq.), the National Environmental Policy Act, the Coastal Zone Management Act, Ohio Revised Code and other applicable laws and regulations. These comments are also based on ODNR's experience as the state natural resource management agency and do not supersede or replace the regulatory authority of any local, state, or federal agency nor relieve the applicant of the obligation to comply with any local, state, or federal laws or regulations.

Natural Heritage Database: The Natural Heritage Database has the following data within one mile of the project area:

Tippecanoe Darter (*Etheostoma tippecanoe*), SC
Yellow-crowned Night-heron (*Nyctanassa violacea*), SI
Paddlefish (*Polyodon spathula*), T

The review was performed on the specified project area as well as an additional one-mile radius. Records searched date from 1980. Conservation status abbreviations are as follows: E = state endangered; T = state threatened; P = state potentially threatened; SC = state species of concern; SI = state special interest; U = state status under review; X = presumed extirpated in Ohio; FE = federally endangered, and FT = federally threatened. The species listed above are not recorded within the specified project area boundaries.

Please note that Ohio has not been completely surveyed and we rely on receiving information from many sources. Therefore, a lack of records for an area is not a statement that rare species or unique features are absent from that area.

Fish and Wildlife: The Division of Wildlife (DOW) has the following comments.

The DOW recommends that impacts to streams, wetlands and other water resources be avoided and minimized to the fullest extent possible, and that Best Management Practices be utilized to minimize erosion and sedimentation.

The project is within the vicinity of records for the little brown bat (*Myotis lucifugus*), a state endangered species. Because presence of state endangered bat species has been established in the area, summer tree cutting is not recommended, and additional summer surveys would not constitute presence/absence in the area. However, limited summer tree cutting inside this buffer may be acceptable after further consultation with DOW (contact Eileen Wyza at Eileen.Wyza@dnr.ohio.gov).

In addition, the entire state of Ohio is within the range of the Indiana bat (*Myotis sodalis*), a state endangered and federally endangered species, the northern long-eared bat (*Myotis septentrionalis*), a state endangered and federally endangered species, the little brown bat (*Myotis lucifugus*), a state endangered species, and the tricolored bat (*Perimyotis subflavus*), a state endangered species. During the spring and summer (April 1 through September 30), these bat species predominately roost in trees behind loose, exfoliating bark, in crevices and cavities, or in the leaves. However, these species are also dependent on the forest structure surrounding roost trees. The DOW recommends tree cutting only occur from October 1 through March 31, conserving trees with loose, shaggy bark and/or crevices, holes, or cavities, as well as trees with DBH \geq 20 if possible.

The DOW also recommends that a desktop habitat assessment is conducted, followed by a field assessment if needed, to determine if a potential hibernaculum is present within the project area. Direction on how to conduct habitat assessments can be found in the current USFWS "[RANGE-WIDE INDIANA BAT & NORTHERN LONG-EARED BAT SURVEY GUIDELINES](#)." If a habitat assessment finds that a potential hibernaculum is present within 0.25 miles of the project area, please send this information to Eileen Wyza for project recommendations. If a potential or known hibernaculum is found, the DOW recommends a 0.25-mile tree cutting and subsurface disturbance buffer around the hibernaculum entrance, however, limited summer or winter tree cutting may be acceptable after consultation with the DOW. If no tree cutting or subsurface impacts to a hibernaculum are proposed, this project is not likely to impact these species.

The project is within the range of the following listed mussel species.

Federally Endangered

clubshell (*Pleurobema clava*)
rayed bean (*Villosa fabalis*)
northern riffleshell (*Epioblasma torulosa rangiana*)
snuffbox (*Epioblasma triquetra*)
purple cat's paw (*Epioblasma o. obliquata*)

Federally Threatened

rabbitsfoot (*Quadrula cylindrica cylindrica*)

State Endangered

elephant-ear (*Elliptio crassidens crassidens*)
pocketbook (*Lampsilis ovata*)
long solid (*Fusconaia maculata maculate*)
washboard (*Megalonaias nervosa*)

Ohio pigtoe (*Pleurobema cordatum*)

State Threatened

pondhorn (*Uniomerus tetralasmus*)

Salamander Mussel (*Simpsonaias ambigua*)

Due to the location, and that there is no in-water work proposed in a perennial stream, this project is not likely to impact these species.

The project is within the range of the following listed fish species.

State Endangered

goldeye (*Hiodon alosoides*)

shortnose gar (*Lepisosteus platostomus*)

Iowa darter (*Etheostoma exile*)

spotted darter (*Etheostoma maculatum*)

northern brook lamprey (*Ichthyomyzon fossor*)

tonguetied minnow (*Exoglossum laurae*)

popeye shiner (*Notropis ariommus*)

State Threatened

lake chubsucker (*Erimyzon sucetta*)

paddlefish (*Polyodon spathula*)

Due to the location, and that there is no in-water work proposed in a perennial stream, this project is not likely to impact these species.

Due to the potential of impacts to federally listed species, as well as to state listed species, we recommend that this project be coordinated with the US Fish & Wildlife Service.

Water Resources: The Division of Water Resources has the following comment.

The [local floodplain administrator](#) should be contacted concerning the possible need for any floodplain permits or approvals for this project.

ODNR appreciates the opportunity to provide these comments. Please contact Mike Pettegrew at mike.pettegrew@dnr.ohio.gov if you have questions about these comments or need additional information.

JOHN H. CHAFEE COASTAL BARRIER RESOURCES SYSTEM

OHIO

LAKE
ERIE

Project Site located this direction
in Franklin County

Number of CBRS Units:	10
Number of System Units:	10
Number of Otherwise Protected Areas:	0
Total Acres:	4,891
Upland Acres:	1,159
Associated Aquatic Habitat Acres:	3,732
Shoreline Miles:	9

Map Date: March 14, 2016

Boundaries of the John H. Chafee Coastal Barrier Resources System (CBRS) shown on this map were transferred from the official CBRS maps for this area and are depicted on this map (in red) for informational purposes only. The official CBRS maps are enacted by Congress via the Coastal Barrier Resources Act, as amended, and are maintained by the U.S. Fish and Wildlife Service. The official CBRS maps are available for download at <http://www.fws.gov/CBRA>.

MEMORANDUM OF AGREEMENT
BETWEEN
THE OHIO DEPARTMENT OF DEVELOPMENT AND
THE CITY OF COLUMBUS
REGARDING
THE ADOPTION OF THE ENVIRONMENTAL REVIEW RECORD
FOR THE
NELSON PARK PROJECT AT
1994 MARYLAND AVENUE, COLUMBUS, FRANKLIN COUNTY, OHIO 43219

WHEREAS, the Nelson Park Preservation Associates, LLC proposes to construct the Nelson Park project (Project) at 1994 Maryland Avenue, Columbus, Ohio 43219; and

WHEREAS, the U.S. Department of Housing and Urban Development (HUD) has a grant agreement with the Ohio Department of Development (DEVELOPMENT) to provide federal HOME Investment Partnership (HOME) funds to eligible projects; and

WHEREAS, DEVELOPMENT has granted HOME funds to the Ohio Housing Finance Agency (OHFA) to be distributed through its Housing Development Assistance Program (HDAP); and

WHEREAS, pursuant to 24 CFR 58.2(a)(7), DEVELOPMENT remains the responsible entity, for purposes of environmental review, for its HOME funds; and

WHEREAS, OHFA intends to loan HOME funds to the Nelson Park Preservation Associates, LLC for the proposed Project; and

WHEREAS, the U.S. Department of Housing and Urban Development (HUD) has a grant agreement with the City of COLUMBUS (CITY) to provide federal HOME Investment Partnership (HOME) funds to eligible projects; and

WHEREAS, the CITY intends to loan HOME funds to the Nelson Park Preservation Associates, LLC for the proposed Project; and

WHEREAS, pursuant to 24 CFR 58.2(a)(7), the CITY remains the responsible entity, for purposes of environmental review, for its HOME funds; and

WHEREAS, DEVELOPMENT and the CITY, as responsible entities for their respective federal funds, intend to adopt a single environmental review record (ERR) pursuant to 24 CFR 58.14 for the Project to fulfill their environmental responsibilities under 24 CFR Part 58.

NOW, THEREFORE, DEVELOPMENT and the CITY agree that environmental review procedures under 24 CFR Part 58 shall be implemented for the Project in accordance with the following stipulations.

I. STIPULATIONS

A. ENVIRONMENTAL REVIEW RECORD

OHFA's environmental consultant, Crawford, Murphy & Tilly (CMT), shall prepare an ERR for the

Project that cites DEVELOPMENT and the CITY as responsible entities. To formally adopt and accept the conclusions of the ERR, the certifying officers for DEVELOPMENT and the CITY shall each sign the ERR and make a Finding of No Significant Impact after reviewing and approving the final ERR.

B. PUBLIC NOTICES

In accordance with 24 CFR 58.43, DEVELOPMENT will prepare a Combined Notice to Public of a Finding of No Significant Impact on the Environment (FONSI) and Notice of Intent to Request Release of Funds (NOI/RROF) that identifies DEVELOPMENT and the CITY as responsible entities for their respective federal funds. DEVELOPMENT and the CITY will coordinate to address any comments submitted by members of the public during the published comment periods. Neither DEVELOPMENT nor the CITY will submit a Request for Release of Funds (HUD 7015.15) to HUD until all comments have been addressed to the satisfaction of DEVELOPMENT and the CITY.

C. REQUEST FOR RELEASE OF FUNDS

DEVELOPMENT and the CITY are the responsible entities for their respective federal funds and will submit separate Request for Release of Funds (HUD 7015.15) documents to the U.S. Department of Housing and Urban Development.

D. RE-EVALUATION

DEVELOPMENT and the CITY will follow the procedures outlined in 24 CFR 58.47 to re-evaluate the ERR if the Project changes significantly in scope or the Project encounters unanticipated environmental conditions during construction.

II. GENERAL PROVISIONS

A. AMENDMENT

Any party to this Memorandum of Agreement may propose to the other parties that it be amended, whereupon the parties will consult to consider such an amendment. To be effective, any such amendment must be in writing and signed by all parties.

B. DURATION

If the Project has not been implemented within five years of the submission of the Request for Release of Funds (HUD 7015.15) documents to the U.S. Department of Housing and Urban Development, DEVELOPMENT and the CITY must re-evaluate the ERR to determine if the original findings are still valid. DEVELOPMENT and the CITY will update the ERR, as necessary, and consult with the U.S. Department of Housing and Urban Development to determine if an additional public notice or submission of HUD 7015.15 documentation is required.

IN WITNESS WHEREOF, the parties have hereby caused this Memorandum of Agreement to be executed.

Attachment A: Standard Mitigations

1. No construction activity, purchase of property, or other choice limiting activities (as detailed in Section II of the OHFA Environmental Review Standards dated May 2016) will occur in advance of the completion of the environmental review record.
2. Any proposed changes to the project must be conveyed to OCD and OHFA promptly. The Environmental Review must be reevaluated by OCD and OHFA prior to initiation of any proposed changes.
3. Project personnel shall be notified, both verbally and through notations on the final construction drawings, that work shall be halted and OCD and OHFA notified immediately if archaeological remains are discovered during construction to allow for coordination with SHPO regarding appropriate actions.
4. If an additional phase or affiliated project is proposed by a member of the current project team, this additional work must be coordinated with SHPO, prior to initiation and regardless of the funding source.
5. Best Management Practices and Reasonably Available Control Measures [OAC Rule 3745-17-08(B)] shall be employed by the Contractor to control fugitive dusts during construction activities.
6. Construction drawings/specifications shall be modified to include the following statement: "The Contractor shall at no time incorporate any materials that are composed of or contain any amount of asbestos. The substitution of materials that contain any amount of asbestos will in no circumstances be acceptable. Upon completion of the project, the Contractor and Project Architect shall submit written statements or certifications asserting that no asbestos containing materials were used in any portion of the construction."
7. Noise-producing construction activities should be avoided during the designated noise-sensitive period (10:00 pm to 7:00 am).
8. Project personnel shall be notified, both verbally and through notations on the final construction drawings, that work shall be halted if indicators of contamination (fill other than "clean hard fill," discolored soils or chemical/petroleum odors) are identified during construction to allow for a qualified environmental professional to inspect the site and make recommendations regarding appropriate actions.
9. Unless the project provides documentation that it is exempt, a site specific Storm Water Pollution Prevention Plan must be developed in accordance with the NPDES Construction Storm Water Permit, which will detail the appropriate Best Management Practices to control erosion until final site stabilization is achieved. In accordance with the construction storm water permit, site inspections must be conducted at least every 7 days and within 24 hours after a significant rain event. During the site inspections, erosion control measures should be observed to ensure

they are functioning correctly. If the project is exempt from construction storm water permitting, no Storm Water Pollution Prevention Plan is required but the Contractor must follow storm water management best practices during construction to prevent erosion and siltation of runoff from any excavated or exposed soils.

10. The Project Sponsor/Project Developer shall ensure that contractors arrange for proper disposal at appropriately-licensed facilities of all solid and/or hazardous waste generated by the construction, as well as any materials currently dumped on the property. The Property Manager will contract with a public or private hauler for removal of waste generated by the occupant households, or will ensure that residents have arranged for trash removal with the local service provider. For elderly residents, the Property Manager shall ensure that trash removal is arranged for residents who are not physically capable of removing their household wastes.
11. The Property Manager shall notify prospective tenants that the unit was constructed as part of a federally funded project and that an environmental review of the project was completed as required under the National Environmental Policy Act. The Property Manager shall advise tenants that the review will be maintained on file by the Project Sponsor throughout the tax credit period and is available for review by the prospective tenant.
12. The Project will follow Occupational Safety and Health Administration (OSHA) recommendations and guidelines during construction activities to ensure worker and public safety. This will include safety equipment to be worn by workers and barriers to public access.
13. Prior to move-in, management shall advise tenants, in person, of safety precautions, including use of locks and other safety features, 911 emergency service, and available neighborhood watch programs.
14. All units shall be equipped with air conditioning systems
15. A spill response kit should be present on the site during construction activities and chemical storage on-site should be minimized.

I have reviewed the above listed standard mitigations for federally funded projects in the state of Ohio and agree to comply with them upon implementation of the project. I understand that project specific mitigations will be developed during the course of the environmental review record, and a review of these additional mitigations will also be necessary.

Hi Alex,

I meant to send on Friday, but please see attached. I can't get rid of the highlighting, and I also don't see a place to sign. Should there be one?

At any rate, let me know how to proceed. Thanks,

Kelan

EXTERNAL E-MAIL

Hi Kelan,

Thank you for your feedback. We made some adjustments to the first two mitigations. Please review the attached updated document and let me know by tomorrow.

Thanks,
Alex Tadda

Thanks Alex. This still does not appear to be 100% accurate given the ODH guidance. I believe the following changes should be made:

1. No sooner than one month after completion of construction, ~~but prior to occupancy~~, the Property Manager shall conduct radon testing in conformance with O.A.C. 3701:69-07, as well as ANSI/AARST "Protocol for Conducting Radon and Radon Decay Product Measurements in Multifamily Buildings (MAMF-2017) with 1/2021 Revisions" or the most recent testing protocols for the applicable building type. The radon sampling tester shall be licensed by the State of Ohio and shall certify that the correct sampling procedures have been followed. ~~If a radon level of 4 pCi/L or greater is detected in any sample, the Property Manager shall install exhaust fans on all radon system risers to convert the passive radon removal systems to active removal systems. Radon testing shall be repeated no sooner than one month after system modifications to confirm that radon levels in all units are below 4 pCi/L.~~ For any area where test results continue to be at or above 4 pCi/L, the Property Manager must consult with a radon mitigation specialist licensed by the State of Ohio to modify the radon removal system to reduce radon levels, resulting in confirmatory test results in all units below 4 pCi/L. *The Project Sponsor shall provide a copy of all radon sample reports to CSD, the City of Columbus, and OHFA and maintain a copy in the project file. If system modifications are required, the Project Sponsor shall provide CSD, the City of Columbus, and OHFA with documentation of the nature and installation date(s) of the modifications and maintain a copy in the project file.*

2. The Project Developer shall install an active radon removal system (sub-slab depressurization system) or systems serving all project units. All slab and basement wall and floor] penetrations shall be sealed using best practices. *Construction drawings shall be modified to include all required radon system components, including sub-slab collection of vapors, venting of vapors away from project units, powered fans and provisions for sealing all slab penetrations with suitable methods. The revised plan sheets shall be provided to CSD, the city of Columbus and OHFA.*

~~Also, arguably #2 should precede #1 and be renumbered.~~

Please advise. Thanks,

Kelan

Subject: Nelson Park Apartments - updated project-specific mitigation measures

EXTERNAL E-MAIL

Hello Kelan,

Attached please find the updated mitigations and monitoring requirements that have been developed for the Nelson Park Apartments Project. Changes were made to the radon system mitigation (Project Specific Mitigation #2) based at the direction of OHFA, based on their communication with ODH and the requirements of the OHFA program. The signed off mitigations are needed for the ERR to be fully complete, so please respond by tomorrow, June 28th, 2024, to abide by OHFA's deadline.

Thank you,
Alex Tada

Subject: RE: Nelson Park Apartments - project-specific mitigation measures

Hello Kelan,

Per OHFA policy, for renovation projects, testing can be done prior to and/or after construction. If any result from the testing is higher than 4pci, a radon mitigation system is needed project wide, regardless of where the results are from in the project. Let me know if you have any other questions.

Thanks,
Alex

Hi Alex,

Quick question for you - whose requirement is it to put radon subslab systems in all units/buildings regardless of whether the unit tested at/above 4pci?

Let me know. Thanks,

Kelan

EXTERNAL E-MAIL

Hello Kelan,

Attached are the mitigations and monitoring requirements that have been developed for the Nelson Park Apartments Project. These mitigations have been developed to minimize environmental impacts and to allow for a Finding of No Significant Impact to be issued for the project. **The project team should promptly review all mitigations, as the project will be required to comply with these mitigations. The project team must respond to this email that they have reviewed and agree to the mitigations before the review record can be released.**

When the project team's response is received, the environmental review record will be sent to ODOD. When ODOD is satisfied with the record, ODOD will contact project personnel to arrange for the required public notices. During the public and agency

comment periods, comments may be received which require modification to the record. All comment periods must be completed and all legitimate comments must be addressed before the funds can be released.

Remember, no work may proceed on the project until the project has received a hard copy of the Acknowledgement of Release of Funds from ODOD OCD. If your project has other federal funding sources, you should also ensure that your project has completed all necessary review requirements for those funding sources before proceeding.

Questions regarding the public notices, public comment periods, and release process should be directed to Ms. Jasmin Walton (Jasmin.Walton@development.ohio.gov). Please allow time for the record to reach ODOD and be reviewed before contacting Ms. Walton.

Thank you,
Alex Tadda

**ODOD OCD Environmental Review
Field Notes Checklist**

This checklist is to be completed during the field visit to the project site and is to be attached to the environmental review record (ERR). It will constitute full documentation for some factors in the ERR, and partial documentation for other factors. Some factors on the Checklist require other kinds of documentation (e.g. contacts and correspondence with the State Historic Preservation Office, interviews and correspondence with fire and police, schools, etc.), so those factors are not included in this checklist.

Aggregate all activities that comprise the project (fund with HOME, ESG, CDBG, or any other funds). Provide answers to all questions that can be observed during the field visit. Use spaces provided for any supplemental information and/or for recording any recommended mitigation measures. Use additional sheets if necessary, but key additional information to the relevant questions.

Several different types of maps will be useful on the field visit, such as project plan or plat map, location map showing major features and facilities in the vicinity, USGS topographical map, zoning map, and land use map. Many of the conditions observed can and should be recorded directly on the project plan. Distances to major features and facilities (e.g., schools and fire stations) and a description of the surrounding area are examples. The plan can then be referenced as "source/documentation" on the EA form.

Section 1: General Project Information

Grant Agreement Number(s): _____

Single year or Multi-Year: _____

General or Tier Review: _____

Project Name: Nelson Park Apartments

Activity Name(s) and Grant Agreement Attachment A Number: _____

Location (Street Address, City, Township, County): _____

Brief Description of Aggregated Project: _____

Site visit date: 9/11 Reviewer: AMT Accompanied by: ARC

1. Project is in a location described as: Central City Suburban Infill Urban Development

In a Developing Rural Area In an Undeveloped Area

2. Project is served by: Paved Access Public Water Public Sanitary Sewer Public Storm Sewers

Gas Electric Other Utilities (Specify) _____

3. Is the project an addition to existing development? Yes No _____

4. Are there existing buildings on the site? Yes No _____

5. Is the site covered with trees and non-agricultural vegetation? Yes No Scattered trees
6. Is the site presently being farmed? Yes No

Section 2: Noise

7. Is the project within 1,000 feet of a major road/highway/freeway? Yes No
8. Is the project within 3,000 feet of a railroad? Yes No
9. Is the project within 15 miles of a military airfield? Yes No
10. Is the project within 5 miles of a civil airport? Yes No

If yes was answered to any question 7 – 10, then a noise assessment must be conducted. For airports, use adopted Day/Night Noise Level (DNL) Contours. For project environments that exceed HUD noise standards, mitigation measures must be conducted.

Section 3: Floodplain/Wetlands/Coastal Zones

11. Are there drainage, streams, rivers, or coastlines on or near the site? Yes No
12. Is the project or access in the floodplain? Yes No
(If the project is in the floodplain compliance will require following the 8-step process.)
13. Are there ponds, marshes, bogs, or evidence of jurisdictional wetlands on or near the site? Yes No
14. Are there soils or vegetation characteristic of wetlands on or near the site? Yes No

Section 4: Hazards

15. Are industrial facilities handling explosive or fire-prone material such as liquid propane, gasoline, or other storage tanks visible from the project site? Yes No
If yes, check for compliance with 24 CFR Part 51 C, using HUD Hazards Guidebook
List storage vessel type, size, contents, location: _____
16. Is the project within 3,000 feet from the end of a runway at a civil airport? Yes No
If yes, check for compliance requirements at 24 CFR Part 51.
17. Is the project within 2½ miles from the end of a runway at a military airfield? Yes No
If yes, check for compliance requirements at 24 CFR Part 51.
18. Is the project near a dump or landfill site? Yes No
19. Is the project near an industry using or disposing of chemicals or hazardous wastes? Yes No

Section 5: Compatibility with Surrounding Development

20. Is the project compatible with surrounding area in terms of:

	Yes	No		Yes	No
Land Use	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Texture, Materials	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Height, Bulk, Mass	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Building Type (Low/High Rise)	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Building Density	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Building Arrangement	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Population Density	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Light/Shadow and Ventilation	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Setback	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Landscaping	<input checked="" type="checkbox"/>	<input type="checkbox"/>

21. Will the project be unduly influenced by:

	Yes	No		Yes	No
Building Obsolescence	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Transition of Land Uses	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Vacant Buildings	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Transition in Density	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Building Deterioration	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Non-Conforming Conversions	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Postponed Maintenance	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Incompatible Land Uses	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Obsolete Public Facilities	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Inadequate Off-Street Parking	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Buildings Crowding Land	<input type="checkbox"/>	<input checked="" type="checkbox"/>			

Section 6: Site Accessibility, Parks and Recreation, Commercial/Retail, Transportation

22. Is the project accessible to employment, shopping, and services? Yes No _____

23. Are parks and play spaces available on site or near by? Yes No _____

(24) Are commercial/retail shopping centers nearby? Yes No _____

25. Is public transportation service available? Yes No _____

Section 7: Physical Site Suitability

26. Slopes are: Not applicable Steep Moderate Slight western side of site
27. Is there evidence of slope erosion? Yes No
 (Such as extensive gullies/small ravines? Bowed retaining walls? Washing away of top-soil and grasses? Tree movement? Fire scars?)
28. Is there evidence of unstable slope conditions? Yes No retaining wall pieces missing
 (Such as trees perpendicular to slope? Vertical cracks at top of slope? Tilted utility poles? Hummocky-undulations on mid to lower slopes?)
29. Is there evidence of ground subsidence at the site? Yes No

Section 8: Soil Suitability and Erodibility

30. Soils are: Loose, Fine Grained Silts Gravel/Sands Clay (Hard/Dry) Non-Expansive
 Moderately Expansive Highly Expansive Mix of (Check Appropriate Boxes) _____
31. Are there visual indications of filled ground? Yes No
 (Materials loosely piled on ground? Loose vegetation? Earth has graded appearance or topography appears unnatural in grade as related to the vicinity?)
32. Are there active rills and gullies on site? Yes No
33. Is there off-site drainage to site? Yes No

Section 9: Natural Hazards

34. Will the project be affected by:

	Yes	No		Yes	No
Faults, Fractures	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Fire Hazards	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Cliffs, Bluffs, Crevices	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Wind/Sand Storms	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Slope Failures from Rains	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Poisonous Plants, Insects, Animals	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Unprotected Water Bodies	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Hazardous Terrain Features	<input checked="" type="checkbox"/>	<input type="checkbox"/>

broken retaining wall would be hazard if remains

Section 10: Man-made Hazards and Nuisances

35. Will the project be affected by:

	Yes	No		Yes	No
Hazardous Street Conditions	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Rail Crossing Hazards	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Dangerous Intersections	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Hazards in Vacant Lots	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Inadequate Street Lighting	<input type="checkbox"/>	<input type="checkbox"/>	Chemical Tank-Car Terminals	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Sanitary Landfills or Mining Operations	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Trucking Terminals	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Industrial Operations	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Other Hazardous Chemical Storage	<input type="checkbox"/>	<input checked="" type="checkbox"/>
High Pressure Gas Transmission Lines	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Overhead Transmission Lines	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Hazardous Cargo Transportation Routes	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Oil and Gas Wells	<input type="checkbox"/>	<input type="checkbox"/>
Through Traffic Problems	<input type="checkbox"/>	<input checked="" type="checkbox"/>	ASTM Phase I Identified Hazards	<input type="checkbox"/>	<input type="checkbox"/>
Inadequately Screened Drainage Catchment Structures	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Children's Play Area Located Near High-Volume Traffic Ways	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Inadequate Separation of Pedestrian and Vehicle Traffic	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Unscreened Quarries or Other Excavations	<input type="checkbox"/>	<input checked="" type="checkbox"/>

36. Will the project be affected by:

	Yes	No		Yes	No
Gas, Smoke, Fumes	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Unightly Land Uses	<input type="checkbox"/>	<input checked="" type="checkbox"/>

DATE OF REPORT:

September 13, 2023

ONSITE DATE:

July 7, 2023

Summary Table

ASTM E 1527-21 Scope Considerations

Assessment Component	Acceptable	Finding	Routine Solution	Phase II	Estimated Cost §	Reference Section	Page
Adjacent Properties (Section 3.3)	✓					9.1.1.1	<u>39</u>
Regulatory Review (Section 5.2)	✓					9.1.1.2	<u>39</u>
Tier I Vapor Encroachment Screening (Section 5.4)	✓					9.1.1.3	<u>39</u>
Historical Review (Section 5.6 & 5.7)	✓					9.1.1.4	<u>39</u>
Surface Areas (Section 6.3.1)	✓					9.1.1.5	<u>39</u>
Exterior Facility Storage Tanks (above or below ground) (Section 6.3.2)	✓					9.1.1.6	<u>40</u>
Operational Activities (Section 6.4.1)	✓					9.1.1.7	<u>40</u>
Hazardous Materials / Petroleum Products (Section 6.4.2)	✓					9.1.1.8	<u>40</u>
Polychlorinated Biphenyls (PCBs) (Sections 6.3.3 and 6.4.3)	✓					9.1.1.9	<u>40</u>
Wastes (Section 6.4.4)	✓					9.1.1.10	<u>40</u>
Interior Facility Storage Tanks (above or below ground) (Section 6.4.5)	✓					9.1.1.11	<u>40</u>

Conditions noted in the Project Summary Table are representative of the overall conditions of the property. There may be more detail on specific assessment components in the report text, therefore the Project Summary Table should not be used as a stand-alone document.

§ Costs depicted are for investigation/program development activities. Remediation costs, if required, will be identified as a result of the activities.

ASTM E 1527-21 Non-scope and HUD-specific Scope Considerations

Histoplasmosis (Section 8.26)	✓					9.1.2.26	<u>45</u>

Conditions noted in the Project Summary Table are representative of the overall conditions of the property. There may be more detail on specific assessment components in the report text, therefore the Project Summary Table should not be used as a stand-alone document.

§ Costs depicted are for investigation/program development activities. Remediation costs, if required, will be identified as a result of the activities.

(1) Based on the 1958 date of construction, there is potential that the paint at the subject property is lead-based. A Lead-Based Paint Inspection and Lead Paint Risk Assessment was performed at the subject property in June 2023. Results of the assessment indicate that no lead painted components were identified. However, a lead dust hazard was identified on the living room floor of Unit 1902. The area with the lead dust hazard should be addressed using special wet cleaning of the affected area. Minimum specifications include HEPA vacuuming, wet wiping, and a final HEPA vacuuming. The USEPA requires clearance sampling following abatement activities. In addition, the subject property currently has on-file a Lead-Based Paint Operations and Maintenance (O&M) Program, prepared by Bureau Veritas and dated June 28, 2023.

(2) Based on the date of construction (pre January 1, 1978), ACM testing was performed in June 2023. Multiple suspect ACMs were identified during the course of the baseline survey. Samples of various suspect materials were collected based on friability and condition of the materials as observed by the Asbestos Inspector. Of the 1,506 samples analyzed, 172 materials were found to contain asbestos. Asbestos abatement procedures should be included in planned construction specifications and all ACM should be abated as part of the demolition/rehabilitation activities in accordance with local, state, and federal regulations. A copy of the Inspection Report (BV Project No. 156846.22R000-001.086) including complete results, findings and conclusions is appended. In addition, the subject property currently has on-file an Asbestos-Containing Materials Operations and Maintenance (O&M) Plan, prepared by Bureau Veritas and dated June 20, 2023. The remaining materials can be maintained in place with implementation of the Asbestos O&M Plan. A properly designed O&M Program is sufficient to maintain the development in accordance with current regulatory standards.

(3) Sampling for radon gas was conducted at the subject property in 2022. Based on the results of laboratory analysis, several locations were identified with radon gas concentrations above the USEPA action level of 4.0 pCi/L. An executed contract for installation of the radon mitigation systems was provided by the user to address this concern. A Radon Mitigation Operations and Maintenance (O&M) Program is required to ensure the proper maintenance of the mitigation systems that will be installed, as well as any others that might be installed in the future. Otherwise, no further action or investigation is recommended regarding radon.

(4) Bureau Veritas performed a limited visual assessment for the presence of mold, conditions conducive to mold, and evidence of moisture in readily accessible interior areas of the subject property. Moisture conditions including water damaged finishes and suspect fungal growth were observed throughout the vacant apartment units entered. In addition, the Key Site Manager indicated that suspect fungal growth is present in the bathroom, living room, and kitchen areas of multiple apartment units. The size of the areas affected by the moisture was not reported to BV. BV recommends that the moisture conditions be investigated and remediated by a licensed contractor in accordance with industry standards and best practices prior to occupation. Furthermore, the source of the moisture should be investigated and corrected in accordance with industry standards.

- APPENDIX K: OPERATIONS AND MAINTENANCE PLANS
- APPENDIX L: RESUMES

1. SUMMARY

Bureau Veritas Technical Assessments LLC (BV) performed a Phase I Environmental Site Assessment, that included on-site observations of the accessible areas of Nelson Park Apartments.

Property Summary	
Subject Property Name	Nelson Park Apartments
Subject Property Address	1994 Maryland Avenue Columbus, Franklin County, Ohio 43219
Number of Parcels	1
Tax Map ID	010-070987-00 A copy of the tax map is included in the Appendices .
Subject Property Lands	9.46 acres
Subject Property Use	Multi-family residential
Year of Construction	1958
Year of Last Renovation	Late 1970s
Number of Buildings	45 residential buildings
Number of Stories	2
Number of Units	177 apartments
Number of Beds	Not applicable
Number of Ancillary Buildings	Two, including a utility building and a maintenance building
Commercial Uses on Subject Property	No
Generalized Vicinity Property Use	Residential and commercial

The following statements summarize the independent conclusions representing BV's best professional judgment based on information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by the Client, owner, or their representatives, has been assumed to be correct and complete. Additionally, the conclusions presented are based on the conditions that existed at the time of the assessment.

The purpose of this report is to provide the Client an assessment concerning environmental conditions (limited to those issues identified in the report), as they existed at the subject property. The assessment was conducted utilizing generally accepted Phase I industry standards, using American Society for Testing and Materials (ASTM) Standard Practice E 1527-21 and the applicable HUD Scope of Work.

The following definitions apply based on ASTM E 1527-21:

A recognized environmental condition is defined as *(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.*

A historical recognized environmental condition is defined as *A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities, without subjecting the property to any controls (e.g. property use restriction, AULS, institutional controls, or engineering controls), at the time the Phase I ESA is conducted (e.g., if there has been a change in the regulatory criteria). If the EP considers this past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusion section of the report as a REC.*

A controlled recognized environmental condition is defined as *A recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).*

A *de minimis* condition is defined as *A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.*

A business environmental risk is defined as *A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.*

A data gap is defined as *A lack or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.*

A significant data gap is defined as *A data gap that affects the ability of the environmental professional to identify a recognized environmental condition.*

HUD-specific scope considerations beyond those specified in ASTM Standard E 1527-21 are considered to be business environmental risks for the purposes of this evaluation.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard E 1527-21 of the subject property. Any exceptions to, or deletions from, this practice are described in Section 2 of this report.

This assessment has revealed no evidence of significant data gaps, Recognized Environmental Conditions (RECs), Historical RECs, or Controlled RECs in connection with the subject property.

However, the following business environmental risks and HUD Scope of Work items were identified:

- Suspect lead-based paint was identified at the subject property. Please refer to Section 8.1 for additional information.
- Identified and suspect asbestos containing materials were identified at the subject property. Please refer to Section 8.2 for additional information.
- The subject property is located within an area of high radon concentrations. Please refer to Section 8.3 for additional information.

- The subject property is located within the vicinity of HUD-defined sources of noise. Please refer to Section 8.13 for additional information.
- A natural gas pipeline was identified along the northwest property boundary. Please refer to Section 8.16 for additional information.
- Moisture conditions were identified at the subject property. Please refer to Section 8.21 for additional information.

2. SURVEY APPROACH / PURPOSE

2.1 Purpose

The purpose of this report is to provide the Client an assessment concerning environmental conditions (limited to those issues identified in the report) as they existed at the subject property. The assessment was conducted utilizing generally accepted Phase I industry standards in accordance with ASTM Standard E 1527-21 and the HUD Multifamily Accelerated Processing (MAP) Scope of Work; the Scope of Work for the Housing Assistance Payments (HAP) Contract Section 8 Tenant-Based Assistance Housing Choice Voucher Program; and the Ohio Housing Finance Agency (OHFA) Scope of Work.

2.2 Detailed Scope of Services

BV reviewed available federal, state, and local records in an effort to identify sites of known or suspected hazardous waste activity located at or near the subject property which could have an adverse impact on the subject property. In an attempt to determine whether historical uses of the subject property and surrounding area have had an environmental impact on the subject property, BV interviewed individuals knowledgeable about the subject property and reviewed available pertinent records and documents. This assessment is based on the evaluation of the information gathered, laboratory analysis of samples collected (when required), and accessibility at the time of the assessment.

The scope of work included an evaluation of:

- The subject property history in an attempt to identify any possible ownership(s) and/or uses that would suggest an impact to the environmental integrity of the subject property as identified through review of reasonably ascertainable standard historical sources.
- Physical characteristics of the subject property as identified through review of reasonably ascertainable topographic, wetlands, flood plain, soils, geology, and groundwater data.
- Current subject property conditions (as applicable), including compliance with appropriate regulations as they pertain to the presence or absence of:
 - Facility storage tanks, drums, containers (above or below ground), etc.
 - Transformers and other electrical equipment which utilize fluid which may potentially contain PCBs
 - The use of hazardous materials/chemicals and petroleum products, and/or the generation, treatment, storage, or disposal of hazardous, regulated, or medical wastes

The scope of work further included:

- For properties built prior to January 1, 1989, a determination if asbestos sampling has previously been performed at the Subject Property, and an assessment for the potential existence of asbestos, including the identification of all suspect materials in areas (interior and exterior) accessed during the site visit. Any materials not sampled are considered suspect until tested and proven otherwise.

The assessment is designed to meet the “baseline survey” requirements of **ASTM E 2356-18**.

The basis for “suspect” determination is taken from the materials listed in Appendix G of the USEPA publication *Managing Asbestos in Place* (the “Green Book”). For the purposes of this report, and following the applicable HUD Guidelines, only those sites constructed prior to January 1, 1989 are evaluated for asbestos.

In instances where samples were collected and analyzed, the laboratory reports list the samples taken from the subject property and their subsequent analytical results for asbestos. Analysis was performed using the “positive-stop” method, whereby analysis is stopped on a group of samples once the first positive sample is analyzed, the entire homogeneous material is considered asbestos-containing, in accordance with applicable federal, state, and local requirements.

Please note, that in the event of any repair, renovation, or demolition activities at the subject property, U.S. Occupational Safety and Health Administration (OSHA) regulations, as well as various state and local regulations, require that additional materials also be considered as suspect ACM until tested and proven otherwise. These materials, as listed in the USEPA Green Book, include resilient floor tile, asbestos-cement board (transite), and roofing felt, which are considered by OSHA to be suspect regardless of installation date (these materials continue to be manufactured and installed in the United States). In addition, state level requirements for sampling and analysis, as well as abatement, may exceed those specified by HUD.

- For residential properties constructed prior to January 1, 1978, visual observations for the potential presence of lead-based paint and a determination if there is an X-ray Fluorescence (XRF) Survey evaluating for lead-based paint at the subject property.
- An evaluation of information contained in programs such as the NPL, CERCLIS, SHWS, RCRIS, SWF, LUST, and other governmental information systems within specific search distances of the subject property. This evaluation was performed to identify any sites that would have the potential to impact the environmental integrity of the subject property.
- The regulatory agency report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report is based on a radius search which focuses on both the subject property and neighboring sites which may impact the subject property. Neighboring sites listed in governmental environmental records are identified within a specific search distance. The search distance varies depending upon the particular government record being checked. The search is designed to meet the requirements of ASTM Standard E 1527-21 and the applicable HUD Scope of Work. The information provided is assumed to be correct and complete.
- Visual observation of the adjacent properties to identify high-risk neighbors and the potential for contamination, if present or suspected, to migrate onto the subject property.
- An evaluation of sources noted above to determine the potential for vapor encroachment conditions at the subject property from both current and former activities at the subject property and adjacent properties. The vapor encroachment screening is designed to meet the requirements of **ASTM Standard E 2600-15**.
- Radon gas propensity, through the review of the USEPA's Map of Radon Zones. For all properties, radon gas concentrations through the exposure and analysis of canisters, using the charcoal liquid scintillation method for all residential properties, in those instances where it is required by HUD, as set forth in the HUD Guidebook. At a minimum, the testing will be performed in accordance to ANSI/AARST protocol for conducting radon and radon decay product measurements in multifamily buildings (ANSI-AARST MAMF-2017, section 111.3.1). In addition, state level requirements may exceed those specified by HUD, and are followed as needed.

2.3 Significant Assumptions

Factual information presented in this report regarding operations, conditions, and test data provided by the Client, owner, or their representative have been assumed by BV to be correct and complete. BV assumes no responsibility for misrepresentation of conditions or information by the property owner, its representatives, public information officials or any authority consulted in connection with the compilation of this report.

BV assumes that all information provided by Environmental Risk Information Services (ERIS) regarding the regulatory status of facilities within the approximate minimum search distance is complete, accurate and current.

2.4 Assessment Viability

This assessment is presumed to be viable for 180 days after the earliest date of the components of the assessment according to the ASTM Standard E1527.

Assessment Component Dates	
Assessment Component	Date
Interviews with owners, operators, and occupants:	July 7, 2023
Reviews of federal, tribal, state, and local government records:	June 27, 2023
Visual inspections of the subject property and of adjoining properties:	July 7, 2023
Declaration by the environmental professional responsible for the assessment:	September 13, 2023
Searches for recorded environmental cleanup liens:	User responsibility

2.5 Limitations and Exceptions

BV identified the following limitations, exceptions, and/or data gaps as part of this Phase I ESA:

- Discussions pertaining to on-site observations are based solely on data collected on July 7, 2023. Observations do not reflect conditions that may have existed prior to this time, or since this time, except as noted in regard to previous investigations conducted at the subject property.
- According to 40 CFR Part 312, Standards and Practices for All Appropriate Inquiries: Final Rule, CERCLA liability rests with the owner or operator of a property and not with an environmental professional hired by the prospective landowner and who is not involved with the ownership or operation of the property.
- Where appropriate and necessary, BV has amended the distances between the subject property and the sites listed in the regulatory database report in order to reflect real world distances.
- The findings, opinions, and conclusions presented here represent BV's best professional judgment based on information and data available to us during the course of this assignment. Additionally, the conclusions presented are based on the conditions that existed at the time of the assessment.

2.5.1 Data Gaps

No significant data gaps in historical information were identified that would impact BV's ability to identify RECs. While data gaps in information may exist, because the data gaps were not determined to be material in identifying a Recognized Environmental Conditions (RECs) they are not considered by ASTM standards to be *significant* and therefore, are not individually addressed in this report.

2.6 User Reliance

BV has completed a HUD Phase I Environmental Site Assessment of the Nelson Park Apartments (the "subject property"), located at 1994 Maryland Avenue in Columbus, Ohio, 43219. The assessment was performed at the Client's request using the methods and procedures consistent with good commercial and customary practice designed to conform with acceptable

industry standards. This report is written to meet the guidelines of the U.S. Department of Housing and Urban Development (HUD) mortgage insurance program and may be relied upon by HUD, and HUD has been named an authorized User of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and BV.

BV understands that this Phase I Environmental Site Assessment will be used by Renewal Housing Associates, LLC to document to HUD that the HUD Approved Lender's application for FHA multi-family mortgage insurance was prepared and reviewed in accordance with HUD requirements. BV certifies this review was in accordance with the HUD requirements applicable on the date of the review and that BV has no financial interest or family relationship with the officers, directors, stockholders, or partners of the Borrower, the general contractor, any subcontractors, the buyer or seller of the proposed property or engages in any business that might present a conflict of interest.

BV was under contract for this specific assignment (Phase I Environmental Site Assessment) by the HUD Approved Lender (underwriter) and has no other side deals, agreements, or financial considerations with the HUD Approved Lender or others in connection with this transaction.

Warning: Title 18 U.S.C. 1001, provides in part that whoever knowingly and willfully makes or uses a document containing any false, fictitious, or fraudulent statement or entry, in any manner in the jurisdiction of any department or agency of the United States, shall be fined not more than \$10,000 or imprisoned for not more than five years or both.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of BV. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to BV.

2.7 Certification

In expressing the opinions stated in this report, BV has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional in the same community and in the same time frame given the same or similar facts and circumstances. Documentation and data provided by the Client, designated representatives of the Client or other interested third parties, or from the public domain, and referred to in the preparation of this assessment, have been used and referenced with the understanding that BV assumes no responsibility or liability for their accuracy.

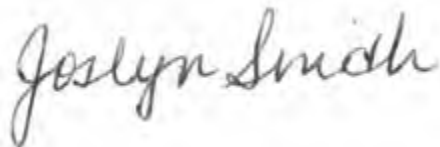

The independent conclusions represent our professional judgment based on information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by the Client or their representative has been assumed to be correct and complete. The conclusions presented are based on the data provided, observations, and conditions that existed on the date of the on-site visit.

If you have any questions regarding this report, please contact the Senior Environmental Consultant listed on the cover page of this report.

Researched by: Heather Hardman, Project Manager
Surveyed by: Heather Hardman, Project Manager
Written by: Heather Hardman, Project Manager

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the All Appropriate Inquiries in conformance with the standard and practices set forth in 40 CFR Part 312.

Joslyn Smith, Senior Environmental Consultant

3. SITE DESCRIPTION

3.1 Subject Property Description

Property Summary	
Subject Property Name	Nelson Park Apartments
Subject Property Address	1994 Maryland Avenue Columbus, Franklin County, Ohio 43219
Number of Parcels	1
Tax Map ID	010-070987-00 A copy of the tax map is included in the Appendices .
Subject Property Lands	9.46 acres
Subject Property Use	Multi-family residential
Year of Construction	1958
Year of Last Renovation	Late 1970s
Number of Buildings	45 residential buildings
Number of Stories	2
Number of Units	177 apartments
Number of Beds	Not applicable
Number of Ancillary Buildings	Two, including a utility building and a maintenance building
Commercial Uses on Subject Property	No
Generalized Vicinity Property Use	Residential and commercial

Subject Property Utility Providers	
Utility	Supplier
Natural Gas Service	Columbia Gas
Electric Service	American Electric Power (AEP)
Sanitary Sewer	City of Columbus
Domestic Water	City of Columbus
Other	Not applicable

No on-site septic systems or potable water wells were identified at the subject property.

According to the local water utility's most recent Water Quality Report, the potable water supplied to the subject property is within federal, state, and local drinking water quality standards.

3.2 Miscellaneous Systems

No miscellaneous systems were identified at the subject property.

3.3 Current Uses of Adjacent Properties

North	
Bordering Street/Road:	Not applicable
Address Range:	510 Sunbury Road and 525 North Nelson Road
Description of Property Use:	Warehouse and distribution facility (Amazon)
East	
Bordering Street/Road:	North Nelson Road
Address Range:	440 and 460 North Nelson Road
Description of Property Use:	Commercial office building and Multi-Family Residential
South	
Bordering Street/Road:	Maryland Avenue
Address Range:	Not applicable
Description of Property Use:	Residential
West	
Bordering Street/Road:	Sunbury Road
Address Range:	Not applicable
Description of Property Use:	Wooded land and a railroad
Findings	
Environmentally Suspect Uses:	No environmentally suspect uses, such as gas stations or dry cleaners, were identified.
Visual Evidence of a Release:	No visual evidence of a release, such as staining or monitoring wells, was observed.
Releases Reported:	The north adjoining property is identified on the LUST database, indicating a release occurred at this facility.
Conclusion:	Refer to Section 7.1.2 for further discussion of the adjacent regulatory database listing(s). No recognized environmental conditions or environmental concerns were identified with the remaining adjacent properties.

4. USER PROVIDED INFORMATION

This Section documents whether the user reported to BV information pursuant to the responsibilities described in Section 6 of the ASTM Standard E 1527-21.

4.1 Chain of Title

Review of the available deed records indicates that the subject property has been owned by NPA Associates, Ltd. since 1980. Deed records were researched back to 1957.

Chain of Title	
Owner	Year Purchased
English Village Inc.	1957
Eastgate Apartments, Inc	1958
Federal Housing Commissioner	1963
Eastgate Apartments	1966
Eastgate Apartment, Ltd.	1974
NPA Associates, Ltd.	1980

4.2 User Engaged Environmental Cleanup Liens and Activity and Use Limitation (AUL) Review

The user engaged BV to review title and judicial records for environmental liens or Activity and Use Limitations (AULs) recorded against the subject property. To do this, BV partnered with AFX Research, LLC to complete this research.

According to the information provided, there are no environmental liens and or AULs are filed against the subject property.

4.3 User Questionnaire

A User Questionnaire was provided to the user (Client) to assist the user and BV in gathering information from the user that may be material to identifying RECs. BV did not receive a response to the User Questionnaire that was provided to the user. Furthermore, the user did not provide any of the information requested in the questionnaire and required by Section 6 of the ASTM Standard E 1527-21. The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

4.4 Reason for Assessment

The purpose of the report is to meet the guidelines of the HUD Multifamily Accelerated Processing (MAP) Scope of Work for New Construction; the Scope of Work for the Housing Assistance Payments (HAP) Contract Section 8 Tenant-Based Assistance Housing Choice Voucher Program; and the Ohio Housing Finance Agency (OHFA) Scope of Work. In addition, the reason for the assessment is assumed to be to qualify for an LLP to CERCLA liability.

5. RECORDS REVIEW

5.1 Physical Setting

5.1.1 Topography

Copies of topographic maps are included in the [Appendices](#).

USGS Topographic Map and Google Earth Review	
Topographic Map Name:	Southeast Columbus, Ohio
Topographic Map Year:	2016
Subject Property Topography	
Upper Elevation (feet):	800
Lower Elevation (feet):	760
Surface Slope:	Moderately sloping
Slope Direction:	Southeast
General Vicinity Topography	
Slope Direction:	Southeast
Nearest Surface Water Feature:	Alum Creek
Nearest Surface Water Feature Distance:	Approximately 470 feet
Nearest Surface Water Feature Direction:	East

5.1.2 Soils / Geology

Review of information available from the United States Department of Agriculture Web Soil Survey indicated the following:

Soil Series Name	Drainage	Texture	Hydric Soils
Eldean-Urban land complex, 0 to 2 percent slopes	Well drained	Silty clay loam	Yes
Cardington-Urban land complex, 6 to 12 percent slopes	Moderately well drained	Sandy clay loam	Yes

Generalized Geology	
Source:	ERIS
Unit Name:	Ohio Shale
Primary Rock Type:	Black shale
Secondary Rock Type:	Shale

5.1.3 Groundwater Hydrology

Estimated groundwater levels may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations.

Hydrogeology	
Source:	Groundwater well data provided by the Ohio Department of Natural Resources Water Resources
Estimated Depth to Shallow Groundwater:	Approximately 20 feet below ground surface
Estimated Direction of Shallow Groundwater Flow:	Southeast

5.2 Standard Environmental Record Sources

The purpose of the records review is to obtain and review records that will help identify recognized environmental conditions. ASTM E1527-21 requires the review of reasonably ascertainable records from standard sources as defined in Section 8.2.1 of ASTM E1527-21. Additional records sources, such as local fire department records, local building department records, and local environmental health department records may be obtained and reviewed at the discretion of the environmental professional.

The availability of record information varies widely, depending on the source. Reasonably ascertainable records are those records that are publicly available, obtainable within reasonable time and cost constraints, and practically reviewable. In addition, the records must be provided by the agency within 20 calendar days of receiving a request, at no more than a nominal cost intended to cover the source's cost of retrieving and duplicating the information.

BV obtained a regulatory database report from ERIS in an effort to determine if the subject property is a listed regulatory site and whether there are any mappable regulatory database sites. The regulatory database search was run in accordance with the Scope of Work for this assessment. BV made a reasonable attempt to field-verify the locations of the ERIS-identified regulatory sites, as well as confirm distances and locations relative to the subject property using available mapping software. Therefore, the distances and/or directions noted in this section may not match the ERIS Report. In addition, BV reviewed the unmappable sites in the database report, cross-referencing addresses and site names. Unmappable sites are environmental risk sites that cannot be plotted with confidence, but can be located by zip code or city name. In general, a site cannot be geocoded because of inaccurate or missing location information in the record provided by the agency. Any identified sites within the specified search radii are included below. A copy of the regulatory database report is included in the [Appendices](#).

See the appended regulatory database report for details of databases reviewed for this assessment.

Regulatory Report Summary

Database	Search Radius	Target Property	Within 0.12mi	0.12mi to 0.25mi	0.25mi to 0.50mi	0.50mi to 1.00mi	Total
CRO	0.125	0	1	-	-	-	1
DERR	1.0	0	0	0	1	7	8

Database	Search Radius	Target Property	Within 0.12mi	0.12mi to 0.25mi	0.25mi to 0.50mi	0.50mi to 1.00mi	Total
ERNS	0.125	1	0	-	-	-	1
FINDS/FRS	0.125	0	4	-	-	-	4
LUST	0.5	0	3	0	5	-	8
PRP	0.125	0	1	-	-	-	1
RCRA NON GEN	0.25	0	2	1	-	-	3
RCRA SQG	0.25	0	1	0	-	-	1
SPILLS	0.125	0	7	-	-	-	7
TANKS 2	0.25	0	1	0	-	-	1
UST	0.25	0	3	0	-	-	3

5.2.1 Subject Property Regulatory Database Review

Facility Name	Facility Address	Database
Nelson Park Apartments	2032 Maryland Avenue	ERNS

Emergency Response Notification System (ERNS)

The ERNS database is a listing of oil and hazardous substances spill reports made available by the US Coast Guard National Response Center. According to the database, a natural gas leak at a private residence was reported in 2010. The caller indicated they detected the odor intermittently. At the time of BV's visit, no natural gas odor was detected at the subject property.

The information provided in this database is not indicative of a recognized environmental condition and no further action or investigation is recommended.

5.2.2 Off-Site Regulatory Database Review

Copco Papers Inc./Unisource Distribution Division/Veritiv Operating Company - Columbus (OH214)	
Facility Address:	525 North Nelson Road
Databases:	LUST, FINDS, PRP, UST, CRO, RCRA NON GEN, SPILLS
Distance:	Adjoining
Direction:	North
Estimated Groundwater Flow:	Southeast
Relationship to Subject Property:	Toward the subject property
Release Reported:	Yes
Release Date:	Not reported (LUST) and 2000 (Spill)
Contaminant(s) of Concern:	Diesel
Media Impacted:	Not reported
Regulatory Status of Release:	No further action
Regulatory Status Date:	Not reported
Other Significant Database Information:	Information from the UST database indicates that a 10,000-gallon diesel UST was removed in 1994. Information in the LUST database indicates that a release associated with a UST closure was reported at this facility, but no date of release was reported. A responsible party, Copco Papers, was identified with the release, which was also designated with an inactive status and assigned a No Further Action (NFA) status by the Ohio Bureau of Underground Storage Tank Regulations (BUSTR). BUSTR assigns a NFA status only when residual contamination, if any, has been investigated and/or remediated in accordance with applicable environmental requirements at the time of closure.
Significant Information from Other Sources:	Closure and NFA status verification documentation was obtained from BUSTR. The property has been redeveloped.
Significant Factors:	Current regulatory status. Removal of the petroleum source. Redevelopment of the property.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the subject property and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	No

506 Sunbury Road	
Facility Address:	506 Sunbury Road
Databases:	TANKS 2
Distance:	Adjoining
Direction:	North
Estimated Groundwater Flow:	Southeast
Relationship to Subject Property:	Toward the subject property

Release Reported:	No
Other Significant Database Information:	Liquid tank/piping permit dated March 15, 2023
Significant Information from Other Sources:	Not Applicable
Significant Factors:	Lack of a reported release.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the subject property and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	No

North Nelson Road/ Maryland Avenue	
Facility Address:	North Nelson Road/ Maryland Avenue
Databases:	SPILLS
Distance:	Adjoining
Direction:	Southeast
Estimated Groundwater Flow:	Southeast
Relationship to Subject Property:	Away from the subject property
Release Reported:	Yes
Release Date:	1998, 2011, and 2018
Contaminant(s) of Concern:	Sewage and Petroleum hydrocarbons
Media Impacted:	Surface water
Regulatory Status of Release:	Not reported
Regulatory Status Date:	Not reported
Other Significant Database Information:	In 2018 a sheen was observed on surface water from an unknown source.
Significant Information from Other Sources:	Not Applicable
Significant Factors:	Estimated direction of groundwater flow. Apparent minor nature of the spill. Lack of reported groundwater contamination.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the subject property and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	No

440 N Nelson Road	
Facility Address:	440 North Nelson Road
Databases:	SPILLS
Distance:	Adjoining
Direction:	Southeast
Estimated Groundwater Flow:	Southeast
Relationship to Subject Property:	Away from the subject property

Release Reported:	Yes
Release Date:	2008
Contaminant(s) of Concern:	Unknown
Media Impacted:	Not reported
Regulatory Status of Release:	Not reported
Regulatory Status Date:	Not reported
Other Significant Database Information:	A bright green material was observed.
Significant Information from Other Sources:	Not Applicable
Significant Factors:	Length of time that has passed since the incident occurred. Lack of reported groundwater contamination.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the subject property and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	No

Sears Roebuck & Co./ Ohio Drop Off	
Facility Address:	533 Nelson Road
Databases:	LUST, FINDS, UST, RCRA Non Gen
Distance:	Approximately 345 feet
Direction:	North
Estimated Groundwater Flow:	Southeast
Relationship to Subject Property:	Parallel to the subject property
Release Reported:	Yes
Release Date:	1994
Contaminant(s) of Concern:	Waste oil
Media Impacted:	Not reported
Regulatory Status of Release:	No further action
Regulatory Status Date:	Not reported
Other Significant Database Information:	A used oil UST was removed in 1993.
Significant Information from Other Sources:	Closure and NFA status verification documentation was obtained from BUSTR. The property has been redeveloped.
Significant Factors:	Current regulatory status. Removal of the petroleum source. Distance from the subject property. Length of time that has passed since closure was granted.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the subject property and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	No

The initial search distances employed for this assessment were defined by ASTM E 1527-21. BV has evaluated the listings noted in the initial determination made by ERIS. It is BV's opinion that none of the remaining listed sites are anticipated to impact the subject property. This determination was based on, but not limited to, such factors such as topographic gradient in relation to the subject property, estimated groundwater flow direction at each site, distance between the listed site and the subject property, and/or the type of site or materials involved.

5.3 Additional Environmental Record Sources

BV reviewed local agency records to supplement the database listings discussed above. Please refer to [Interviews](#) below for detailed discussion of departments contacted and information obtained.

5.4 Tier 1 Vapor Encroachment Screening

Bureau Veritas performed a Non-Invasive Tier 1 Vapor Encroachment Screening in compliance with ASTM E 2600-15 "Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions". The purpose of the Tier 1 Screening is to conduct an initial screen to determine if a Vapor Encroachment Condition (VEC) exists in connection with the subject property (referenced as the "Target Property" in the ASTM E 2600-15 Standard). A VEC is defined as the presence or likely presence of vapors from any chemical of concern (COC) in the subsurface of a property caused by the release of vapors on or near the property.

Bureau Veritas reviewed standard environmental record sources to identify if there are known or suspected sources of contamination within the area of concern. The approximate minimum search distance is based upon the chemical of concern (*i.e.* petroleum hydrocarbons vs. non-petroleum hydrocarbons) and the location of a known or suspected source of contamination. According to ASTM E 2600-15, for contaminated sites with petroleum hydrocarbon COCs, the search radius is 528 feet (1/10th mile) from the contaminated site to the boundary of the Target Property. For contaminated site with non-petroleum hydrocarbon COC, the search radius is 1,760 feet (1/3rd mile) from the contaminated site to the boundary of the Target Property. The AOC search distances were determined by ASTM based upon conservative consideration of both contaminated plume lengths and the distances vapors volatilized from contaminated plumes might travel along a path of least resistance in relatively permeable soil from a source through the vadose zone directly to a Target Property. The default AOC may be expanded or reduced by the environmental professional using experience and professional judgment. Consideration may be given, for example, to groundwater flow direction, subsurface characteristics, surficial features and man-made features.

Bureau Veritas obtained a regulatory database report from ERIS in an effort to determine if the subject property is a listed regulatory site and whether there are any mappable regulatory database sites within the specified search distance. Bureau Veritas attempted to confirm distances and locations relative to the subject property using available mapping software. Therefore, the distances and/or directions noted in this section may not match the Database Report. In addition, Bureau Veritas reviewed the unmappable sites in the database report, cross-referencing addresses and site names.

A Vapor Screening Report (VSR) was generated through the ERIS Vapor Screening Tool in order to help identify vapor risks associated with the Subject Property. The ERIS Vapor Screening Tool is designed to assist those in conducting a VES on a property involved in Real Estate Transactions under the ASTM Standard Designation E2600-15. The search distances listed in the VSR are based on search distances used in the Database Report and the search results are grouped based on the minimum default search distances for COCs and petroleum hydrocarbon COCs (PHCOCs). Sites that were identified as potential vapor concerns were further analyzed with respect to distance from the Subject Property, groundwater flow gradient, the presence of preferential pathways, hydraulic barriers, physical barriers, and soil geology when applicable.

A copy of the Vapor Encroachment Screening is attached in the [Appendices](#).

5.4.1 Subject Property Sources

Based on on-site observations, a review of the ERIS Regulatory Database Report, and the ERIS Vapor Encroachment Screening Report, no on-site sources of VECs were identified, and a VEC associated with on-site activities can be ruled out.

5.4.2 Off-Site Sources

Based on observations of adjacent and nearby properties, a review of the ERIS Regulatory Database Report, and the ERIS Vapor Encroachment Screening Report, no off-site sources of VECs were identified, and a VEC associated with off-site properties can be ruled out.

5.5 Historical Use Information

5.5.1 Historical Data Sources

A history of the previous uses of the subject property, and properties in the surrounding area to the extent that this information was revealed in the course of researching the subject property, was developed consistent with practices specified in ASTM Standard E 1527-21 § 8.3. A summary of the standard historical sources and data reviewed by BV is listed below. Copies of representative historical source information are provided in applicable [Appendices](#).

Standard Historical Sources		
Data Type	Source	Years Covered
USGS Topographic Maps:	ERIS	1925, 1943, 1955, 1964, 1973, 1985, 1994, 2013, 2016, 2019
Aerial Photographs:	ERIS	1938, 1946, 1953, 1963, 1972, 1979, 1989, 1995, 2004, 2005, 2006, 2009, 2010, 2013, 2015, 2017, 2019
Fire Insurance (Sanborn) Maps:	ERIS	1887, 1891, 1901, 1922, 1950, 1971
Local Street Directories:	ERIS	1932, 1937, 1941, 1945, 1951, 1955, 1960, 1965, 1971, 1976, 1981, 1986, 1991, 1997, 2000, 2003, 2008, 2011, 2016, 2020
Building Department Records:	Columbus Building and Zoning Department	1995-Current
Fire Department Records:	Columbus Fire Department	Pending response from agency
Zoning/Land Use Records:	Columbus Building and Zoning Department	Current
Property Tax Files	Franklin County Assessor	1957-Current
Recorded Land Title Records	Not applicable	Current
Other Historical Sources:	Not applicable	Not applicable

5.5.2 Prior Use Interviews

Prior-Use Interviews				
Person	Contacts	Knowledgeable	Associated with Property Since	Comments
Maikeda Holt Property Manager ABC Management	614.928.1098	Knowledgeable	2016	Interviewee was unaware of any prior uses of the subject property.
James Summerall Head Maintenance ABC Management	614.426.3764	Knowledgeable	2020	Interviewee was unaware of any prior uses of the subject property.

No adjacent property owners were interviewed regarding the prior use of the surrounding area.

5.5.3 Historical Environmental Documentation

Historical Environmental Documentation					
Report Title	Prepared By	Report Date	Obtained From	Copy of Report	Concerns Identified
Lead-Based Paint Inspection and Risk Assessment Report	Get the Lead Out, LLC	October 12, 2007	Client	Available Upon Request	Yes. Further discussed below.
HUD Phase I Environmental Site Assessment	EMG (currently BV)	December 20, 2018	Client	Available Upon Request	Yes. Further discussed below.
Asbestos Inspection Report	EMG (currently BV)	December 27, 2018	Client	Available Upon Request	Yes. Further discussed below.
Short-Term Radon Testing Report	BV	June 19, 2022	Client	Available Upon Request	Yes. Further discussed below.
HUD Phase I Environmental Site Assessment	BV	August 1, 2022 (Revised: June 29, 2023)	Client	Available Upon Request	Yes. Further discussed below.

Lead-Based Paint

Lead based-paint was previously identified in samples of exterior components including door lintels, window lintels, doors, and door frames at the subject property. Dust and deteriorated paint was identified to be present on stair floors and exterior door lintels. Get the Lead Out, LLC's (GLO) recommendations included that the owner eliminate all lead paint hazards identified in the report within 90 days of receiving the report in units where a child younger than age 6 lives and the common areas servicing those units and to eliminate lead paint hazards within 12 months in all other dwelling units.

EMG indicated that based on the date of construction, there was the potential that paint at the subject property was lead based. No sampling took place as part of the assessment. EMG stated that the subject property reportedly maintains a Lead-Based Paint operations and maintenance (O&M) Program prepared by C. Martin Company and dated September 2008; however, it was not provided for review. Refer to Section 8.1 for further discussion of current conditions.

Previous Asbestos Sampling

EMG with RiskNomics completed an Asbestos Inspection at Building 2036 in 2018. In addition, a limited inspection was conducted at Building 2082 at that time. The inspections were completed prior to renovation activities planned at the time of the inspections. Asbestos was identified in samples of drywall texture and joint compound, vinyl floor tile, and various mastics the subject property. Refer to Section 8.2 for further discussion of current conditions.

Previous Radon Sampling

Radon sampling was conducted in 2022. Results of the previous radon sampling indicated radon was detected at levels above the action level of 4.0 pCi/L as established by the USEPA. Refer to Section 8.2 for further discussion.

HUD/OHFA Scope of Work Items

The following HUD/OHFA Scope of Work items were identified during EMG/BV's Phase I Environmental Site Assessments:

- The subject property was identified to be located within the vicinity of HUD-defined sources of noise. Refer to Section 8.13 for further discussion.
- A natural gas transmission pipeline was reported to be present on or immediately adjacent to the subject property. Refer to Section 8.16 for further discussion.

5.6 Historical Use Information for the Subject Property

Based on review of the historical resources identified in Section 5.5.1, the following chronological history was developed for the subject property.

Historical Use Information			
From	To	Subject Property Use	Environmental Concerns
Not Applicable	1887	No historical data was available.	No
1887	1950s	Undeveloped, naturally vegetated land and/or agricultural land.	No
1958	Current	The subject property was developed with the present day apartment complex, formerly Eastgate Apartments and currently Nelson Park Apartments.	No

The historical information developed and reviewed for the subject property revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs).

BV was not able to obtain the subject property history in five year intervals. This data failure represents a data gap; however, this data gap is not considered a significant data gap and therefore is not addressed in Section 3.4.1.

5.7 Historical Use Information for the Adjoining Properties

To the extent that indications of current and past uses of adjoining properties were identified through reconnaissance observation, interviews, records review or through client provided information, they are described below. Locations of adjoining properties discussed can be found on the site vicinity sketch in the [Appendices](#).

Chronological History of Adjoining Properties			
From	To	Adjoining Property Use	Environmental Concern
North			
Not Applicable	1887	No historical data available	No
1887	1950s	Franklin County Children's Home and naturally vegetated and/or agricultural land	No
1950s	1960s	Naturally vegetated and/or agricultural land	No
Mid 1960s	Late 2010s	Warehouse and naturally vegetated land	Yes. Refer to Section 5.2.2.
2021	Current	Warehouse/commercial	No
East			
Not Applicable	1887	No historical data available	No

Chronological History of Adjoining Properties			
From	To	Adjoining Property Use	Environmental Concern
1887	1940s	Naturally vegetated land	No
Late 1940s	1970s	Residential and naturally vegetated land	No
1970s	Current	Multi-family residential and offices	No
South			
Not Applicable	1887	No historical data available	No
1887	1920s	Naturally vegetated and/or agricultural	No
1920s	Current	Residential	No
West			
Not Applicable	1887	No historical data available	No
1887	Current	Naturally vegetated land and/or agricultural land and a railroad	No

The historical information developed and reviewed for the adjoining properties revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs).

6. SUBJECT PROPERTY RECONNAISSANCE

6.1 Methodology and Limiting Conditions

The objective of the site reconnaissance is to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the property. In accordance with ASTM E1527-21, BV attempted to visually observe the periphery of the subject property and all structures to the extent not obstructed by obstacles. In addition, BV attempted to visually observe interior common areas, maintenance and repair areas, and a representative sample of occupant spaces. In general, BV does not look under floors, above ceilings, behind walls, in confined spaces, in transformer vaults, or in other areas not considered to be safe to access.

Site Reconnaissance Conditions	
Date Completed:	July 7, 2023
BV Project Manager:	Heather Hardman
On-Site Point-of-Contact (POC)	Maikeda Holt, Property Manager, ABC Management
Weather Conditions:	Sunny
Temperature (F):	80s
Percent of Units Observed:	Approximately 10%
Areas Accessed:	Areas accessed included apartment numbers 494, 502, 1874, 1906, 1914, 1924, 1934B, 1938B, 1940D, 1950, 1954, 1960A, 1962D, 1966, 2040A, 2086, 2090 and 2096; all common areas; all exterior areas (except the roofs); and the subject property boundaries.
Access Limitations:	None
Unaccessed Areas:	Visual observation of pipe chases, behind walls, and above drop ceiling tiles was not performed as part of this assessment.
Pre-Survey Questionnaire	
Pre-Survey Questionnaire	A Pre-Survey Questionnaire was completed as a part of this assessment
PSQ Included in the Appendices?	Yes

6.2 General Site Setting

General Site Setting	
Generalized Vicinity Property Use	Residential and commercial

6.3 Exterior Observations

6.3.1 Surface Areas

Surface Areas	
Feature	Identified at Subject Property
Parking Provisions:	Yes. Further discussed below.
Environmentally Significant Floor Drains, Sumps and Pits:	No

Surface Areas	
Feature	Identified at Subject Property
Pools of Liquid Waste:	No
Surface Staining:	No
Unusual or Noxious Chemical Odors:	No
Landfilling:	No
Stressed Vegetation:	No
Stormwater Retention/Detention Basins:	No
Domestic Water Wells:	No
Monitoring Wells:	No
Irrigation Wells:	No
Dry Wells:	No

Parking Provisions	
Parking provisions:	Surface-level paved parking and drive areas
Collection of run-off:	Stormwater from drive and parking surfaces is directed to surface drains via sheet flow.
Staining or Discharges:	Minor oil discharges were observed on the parking surfaces; however, the discharges are incidental in nature and corrective action is neither practical nor warranted.

6.3.2 Exterior Facility Storage Tanks (above or below ground)

Visual observations for manways, vent pipes, fill connections, concrete pads, and saw cuts in paved areas did not identify any surface connections or disturbances that would indicate the potential for an underground storage tank (UST) installation on the exterior portions of the subject property.

No aboveground storage tanks (ASTs) were observed on the exterior portions of the subject property.

The manways and surface caps observed at the subject property were for site services (i.e., domestic water, storm water, and sanitary sewer system).

Furthermore, review of currently installed mechanical equipment and historical information concerning mechanical equipment identified the use of alternate fuel sources (i.e., electric, natural gas), thereby eliminating the need for additional on-site fuel storage on the exterior of the subject property.

Based on the review of the state list of registered USTs, no USTs are registered for the subject property.

Interviews with persons knowledgeable of the subject property did not identify any evidence of current or historic storage tanks (above or below ground) on the exterior of the subject property.

6.3.3 Polychlorinated Biphenyls (PCBs) - Exterior Observations

Potential PCB-Containing Equipment	
Feature	Identified at Subject Property
Oil Cooled Transformers:	Yes. Further discussed below.
Other Hydraulic Equipment:	No

Oil Cooled Transformers	
Type:	Pole-mounted
Number of Units:	12
Owner:	Utility company
Labeled:	Not labeled
Age:	Appears to have been installed after 1979
PCB Status:	Unlikely to be PCB-contaminated based on the apparent age of the equipment.
Spills or Leaks Observed:	No
Conclusion:	Based on the information above, the presence of this equipment does not represent a recognized environmental condition.

6.4 Interior Observations

6.4.1 Operational Activities / Noteworthy Tenants

Current Property Use	
Current Property Use	Multifamily
Noteworthy tenants at the Property?	No
Environmental permits, registrations, notifications on file?	No
Environmentally suspect activities or operations conducted at this Property?	No

BV observed no circumstances of environmental concern associated with the operational activities at the subject property. No further action or investigation is recommended regarding operational activities at the subject property.

6.4.2 Hazardous Materials / Petroleum Products Storage and Handling

Visual observation for the use and/or storage of hazardous materials and petroleum products was performed. The following products listed in the Observed Materials Table below were identified.

Storage and Use of Hazardous Materials and Petroleum Products			
Material	Quantity	Storage Location	Spills or Leaks
Janitorial and maintenance supplies	Retail-sized containers	Janitor closets and other designated areas	No

Review of the hazardous materials use and storage at the subject property did not identify any recognized environmental conditions or environmental concerns with regards to the materials listed in the table above.

6.4.3 Elevators and Other Hydraulic Equipment

Elevators and Other Hydraulic Equipment	
Feature	Identified at Subject Property
Hydraulic Elevators:	No
Hydraulic Lifts:	No
Other Hydraulic Equipment:	No

6.4.4 Waste Generation, Treatment, Storage, and Disposal

Waste Generation and Disposal	
Feature	Identified at Subject Property
Waste Generation:	Yes. Further discussed below.
Septic Systems:	No
Sewer Lift Stations:	No
Grease Traps:	No
Oil Water Separators:	No
Unknown Drums or Containers:	No
Waste Disposal Ponds or Lagoons:	No

Waste Generation			
Waste Type	Disposal Method	Storage Location	Spills or Leaks
Domestic sewage	Sanitary sewer	Not applicable	No
Municipal trash	Contracted waste hauler	Dumpsters	No

Review of waste storage and disposal information did not identify any recognized environmental conditions or environmental concerns with regards to the wastes listed in the table above.

6.4.5 Interior Facility Storage Tanks (above or below ground)

Visual observations for manways, vent pipes, fill connections, concrete pads, and saw cuts in paved areas did not identify any surface connections or disturbances that would indicate the potential for an underground storage tank (UST) installation on the interior of the subject property.

No aboveground storage tanks (ASTs) were observed on the interior of the subject property.

The manways and surface caps observed at the subject property were for site services (i.e., domestic water, storm water, and sanitary sewer system).

Furthermore, review of currently installed mechanical equipment and historical information concerning mechanical equipment identified the use of alternate fuel sources (i.e., electric, natural gas), thereby eliminating the need for additional on-site fuel storage on the interior of the subject property.

Based on the review of the state list of registered USTs, no USTs are registered for the subject property.

Interviews with persons knowledgeable of the subject property did not identify any evidence of current or historic storage tanks (above or below ground) on the interior of the subject property.

7. INTERVIEWS

7.1 Owner

BV submitted an Owner Questionnaire to the client in an effort to identify the owner of the subject property who could be interviewed to provide information regarding proceedings involving the subject property.

A completed Owner Questionnaire was not returned to BV. The lack of this information represents a data gap. However, based on the other information obtained during the completion of this assessment, the lack of the Owner Questionnaire does not represent a significant data gap. A copy of the blank Owner Questionnaire is included in the Appendices .

7.2 Key Site Manager

BV attempted to interview the Key Site Manager as part of this assessment. In addition, a Questionnaire was provided to the Key Site Manager to assist BV in determining if recognized environmental conditions exist at the subject property.

Key Site Manager Interviews			
Name	Relationship To Property	Years With Property	Telephone Number
Maikeda Holt	Property Manager	7	614.928.1098

The Key Site Manager did not identify any recognized environmental conditions or environmental concerns with the current or historical use of the subject property. A copy of the Key Site Manager Questionnaire is included in the Appendices.

7.3 Occupants

BV made a reasonable attempt to interview all major occupants and also those other occupants whose operations are likely to indicate a recognized environmental condition.

The subject property is a multifamily residential facility and contains no non-residential tenants. Therefore, based on the ASTM Standard guidance, occupants were not interviewed.

7.4 Past Owners, Operators, and Occupants

No past owners of the subject property, who likely would have material information regarding recognized environmental conditions at the subject property, were identified.

7.5 Owners or Occupants of Adjacent or Nearby Property

The subject property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews were not conducted with adjacent or nearby property owners or occupants.

7.6 Interviews with Local Government Officials

Building Department

Name of Agency:	Columbus Building and Zoning Department
Contact Name/Telephone:	Not applicable
Review Method:	Review of online records.
Records Date Back To:	1995-Current
Summary of Records Reviewed:	General building permits for new construction are on file for the subject property.
Environmentally Significant Information:	None identified

Fire Department	
Name of Agency:	Columbus Fire Department
Contact Name/Telephone:	Not applicable
Review Method:	A written request for information and a follow-up request has been submitted. A response is currently pending.
Records Date Back To:	Pending response from agency
Summary of Records Reviewed	No response has been received to date. However, based on review of other historical and regulatory resources, it is not anticipated the information from this agency, if any, would significantly alter the findings and conclusions of this report. Upon receipt and review, any environmentally significant information not identified through other sources will be provided to the Client.
Environmentally Significant Information:	Pending response from agency

Planning/Zoning Department	
Name of Agency:	Columbus Building and Zoning Department
Review Method:	Review of online records.
Current Zoning:	ORIG, Residential, R4

Health Department	
Name of Agency:	Columbus Fire Department
Contact Name/Telephone:	Not applicable
Review Method:	A written request for information has been submitted. A response is currently pending.
Records Date Back To:	Pending response from agency
Summary of Records Reviewed	No response has been received to date. However, based on review of other historical and regulatory resources, it is not anticipated the information from this agency, if any, would significantly alter the findings and conclusions of this report. Upon receipt and review, any environmentally significant information not identified through other sources will be provided to the Client.
Environmentally Significant Information:	Pending response from agency

7.7 Interviews with Others

No other individuals were interviewed as part of this assessment.

8. NON-ASTM SCOPE AND HUD SCOPE OF WORK CONSIDERATIONS

8.1 Lead-Based Paint

Based on the 1958 date of construction, there is potential that the paint at the subject property is lead-based. A Lead-Based Paint Inspection and Lead Paint Risk Assessment was performed at the subject property in June 2023. Results of the assessment indicate that no lead painted components were identified. However, a lead dust hazard was identified on the living room floor of Unit 1902. The area with the lead dust hazard should be addressed using special wet cleaning of the affected area. Minimum specifications include HEPA vacuuming, wet wiping, and a final HEPA vacuuming. The USEPA requires clearance sampling following abatement activities.

A copy of the survey report is included in the appendices. In addition, the subject property currently has on-file a Lead-Based Paint Operations and Maintenance (O&M) Program, prepared by Bureau Veritas and dated June 28, 2023.

8.2 Asbestos-Containing Materials

Based on the date of construction (pre January 1, 1978), ACM testing was performed in June 2023. Multiple suspect ACMs were identified during the course of the baseline survey. Samples of various suspect materials were collected based on friability and condition of the materials as observed by the Asbestos Inspector. Of the 1,506 samples analyzed, 172 materials were found to contain asbestos. A copy of the Inspection Report (BV Project No. 156846.22R000-001.086) including complete results, findings and conclusions is appended. In addition, the subject property currently has on-file an Asbestos-Containing Materials Operations and Maintenance (O&M) Plan, prepared by Bureau Veritas and dated June 20, 2023.

8.3 Radon Gas

On May 24, 2022, AARST/NRPP certified radon technician Mr. Kurt Brickner (cert# 107585-RMP) placed 157 short-term charcoal radon devices at the subject property. The devices were retrieved on May 26, 2022. Several locations were identified with radon gas concentrations above the USEPA action level of 4.0 pCi/L, and there were numerous missing devices and access issues during canister deployment and retrieval. Confirmatory radon testing was subsequently conducted at the subject property. On September 23, 2022 and September 27, 2022 Mr. Kurt Brickner placed 93 short-term charcoal radon devices at the subject property. The devices were retrieved on September 27, 2022 and September 29, 2022 respectively.

The devices were analyzed by Airchek, Inc. (NRPP Lab ID# RL10) and were analyzed via the EPA Method #402-R-92-004.

The testing was performed in accordance to ANSI/AARST protocol for conducting radon and radon decay product measurements in multi-family buildings. (ANSI-AARST MAMF-2017), section 111.3.1. QA/QC samples (field blanks and duplicates) were also submitted in accordance with AARST guidelines. Where applicable and more stringent, state-level requirements were followed in place of HUD-prescribed methodology.

The USEPA uses a continuous exposure level of 4.0 pCi/L (picoCuries per liter of air) as an action level at which additional action is recommended.

Based on the results of laboratory analysis, several locations were identified with radon gas concentrations above the USEPA action level of 4.0 pCi/L. These locations and the results of their analysis are listed in the Short-Term Radon Testing Report included in Appendix J. The remaining samples collected were below the USEPA action level of 4.0 pCi/L.

A copy of the laboratory analytical results report is appended (Appendix J).

8.4 Floodplain

Flood Zone Map Review			
Community Panel	Map Date	Subject Property Flood Zone	Area
39049C0327K	June 17, 2008	Zone X (unshaded), minimal risk areas outside the one percent and 0.2 percent annual chance floodplains. No base flood elevations or base flood depths are shown within these zones.	Entire subject property

No preliminary or pending FEMA maps were identified for the subject property address.

A copy of the flood plain map is appended (Appendix D).

The subject property is not within a 100-year or 500-year floodplain.

8.5 Wetlands

Wetlands Review	
Subject Property	Adjacent Properties
Review of the NWI data did not identify any wetlands.	Review of the NWI data did not identify any wetlands.

A copy of the Wetlands map is appended (Appendix D).

8.6 Landfills

Review of regulatory databases indicates that there are no active or inactive landfills located within 3,000 feet of the subject property.

8.7 Sole Source Aquifer Recharge Area

Based on review of the Designated Sole Source Aquifers Nationally Map, published by the U.S. Environmental Protection Agency (EPA), the subject property is not located in an area with a sole source aquifer.

8.8 Coastal Barriers

Based on the review of the USFWS Coastal Barrier Resources System Mapper, the subject property is not located within a designated coastal barrier as established by the U.S. Congress through the Coastal Barrier Improvement Act.

8.9 Farmlands Protection

The Farmland Protection Policy Act (FPPA) of 1981 requires Federal Agencies to minimize the extent to which their programs contribute to commitment if farmland is converted to nonagricultural use. USDA Regulations implementing the FPPA require Federal agencies to conduct a farmland conversion impact rating when a proposed project may convert farmlands to non-agricultural uses.

The project involves new construction. Review of the USDA Web Soil Survey indicated that prime farmland regulated under the Farmland Protection Policy Act is not present at the project location. This project is in compliance with the Farmlands Protection Policy Act.

8.10 Coastal Zone Management

Based on the review of Coastal Zone Boundary map published by the Ohio Department of Natural Resources, the subject property is not located in a designated Coastal Management Zone.

8.11 Endangered or Threatened Species or Habitat

The project will involve new construction and ground disturbance. BV has reviewed information on the US Fish and Wildlife Service mapper, NOAA Fisheries, and the Ohio Natural Heritage Program to determine whether any federally listed threatened or endangered species, or their habitat, may exist on or in close proximity to the subject property. Based on review of these resources, it is possible that the project could impact up to three threatened, endangered, or candidate species. Final critical habitat has been designated for one of these species, the Indiana Bat. The subject property does not contain any of the critical habitat designated for this species. Therefore, the potential for impact to this species from the proposed new construction is not anticipated. One of the species (Northern Long-eared Bat) is noted to require only the streamlined review process. The subject property consists of a developed area consisting of buildings, landscaping, and paved areas. The habitat of the Northern Long-eared Bat generally consists of caves and mines in the winter, and forested areas in the remainder of the year. The Northern Long-eared Bat tends to select areas based on the availability of roosting cavities in trees and under bark. The proposed new construction is expected to take place in previously developed areas and will not result in the removal of any trees at the subject property. Therefore, it is BV's opinion that the proposed new construction will have no effect on this species or habitat associated with this species. The Monarch Butterfly is currently a Candidate species. There is no available data that would suggest that the proposed new construction would result in impact to the Monarch Butterfly species. Therefore, this project has been determined to have No Effect on listed species. This project is in compliance with the Endangered Species Act without mitigation.

8.12 Historic Preservation

The Nelson Park Apartments have been determined by the Ohio State Historic Preservation Office (SHPO) to be potentially eligible for listing in the National Register of Historic Places under Criterion A for its role and story of the effects of urban renewal in Columbus. The SHPO reviewed the plans for rehabilitation and issued a letter to HUD dated February 8, 2023 of No Adverse Effect on historic properties provided that the planned work was completed as proposed and that the finished work would be submitted to the Technical Preservation Services department of the SHPO and the National Park Services for approval.

8.13 Noise

HUD Guidelines indicate the following noise sources should be evaluated:

- Freeways, major highways, or busy roads within 1,000 feet
- Railroads within 3,000 feet
- Civil airports within five miles
- Military airports within 15 miles

The following noise source(s) were identified in the subject property area.

Noise Source	Name	Distance	Direction
Busy Road	Nelson Road	Adjacent	East
Busy Road	Interstate 670	Approximately 970 feet	North
Railroad	Norfolk Southern Railroad	Approximately 140 feet	West
Railroad	Columbus & Ohio River Railroad	Approximately 765 feet	North
Civil airport	John Glenn Columbus International Airport	Approximately 2.24 miles	Northeast
Military airport	Rickenbacker International Airport (includes Ohio National Air Guard flight operations)	Approximately 10.29 miles	Southeast

Based on proximity of the noise sources, BV conducted a noise study for the subject property. The noise study was conducted using methodology prescribed in the HUD Noise Guidebook and the On-Line HUD Site DNL Calculator. Based on the results of the noise study, the exterior noise level at the subject property was calculated to be 73 decibels (dB), which is defined by HUD as Normally Unacceptable. The projected 10-year exterior noise level at the subject property is 74 dB, which is also defined by HUD as Normally Unacceptable.

8.14 Rail Lines

There are no right-of-ways for surface-level railroads within 100 feet of the subject property boundary.

8.15 Explosive or Flammable Hazards

An explosive/flammable hazard is a stationary container which stores, handles, or processes explosive or fire prone substances, such as liquid propane or gasoline that is greater than 20 gallons (pressurized) or greater than 100 gallons (unpressurized).

No explosive/flammable hazards were identified at the subject property. In addition, there is no direct line of sight from any part of the subject property to any explosive/flammable hazard. In addition, review of available aerial photographs did not identify any explosive/flammable hazards, nor is there an explosive or flammable hazard in the near vicinity that is not shielded from the subject property by topography, existing structures, or other barriers, natural or man-made. Furthermore, no documentation or information was available that would indicate that any new aboveground storage tanks or containers of more than 100 gallons are proposed to be installed at the subject property.

8.16 Natural Gas or Petroleum Pipelines

The Pipeline Table below describes the pipeline that was identified at the subject property and on the adjoining property to the north.

Natural Gas or Petroleum Pipelines				
Owner	Location	Product	Operating Pressure	Status
Columbia Gas	Northwestern portion of the subject property and along the northern property boundary.	Natural gas	Low	Active

Bureau Veritas contacted a utility representative for additional information concerning the pipeline. According to the representative, the pipeline is low pressure.

8.17 High Voltage Power Transmission or Other Towers

The on-site buildings are not located within the easement of any overhead high voltage transmission line. In addition, the on-site buildings are also not located within the engineered fall distance of any high voltage power transmission, radio antennae, satellite, cellular, or other towers.

8.18 Airport Hazards

The subject property is not located within 2,500 feet from the end of a civil airport runway or 15,000 feet from the end of a runway at a military airfield.

8.19 Oil and Gas Operations

The subject property is not located within 300 feet from any existing or planned oil and gas drilling operations or any hydraulic fracturing (fracking) activities.

Furthermore, the subject property is not located within 75 feet of an operating or abandoned oil or gas well.

8.20 Traffic Hazards

The subject property is not located in an area with traffic hazards that could directly impact the subject property and/or subject property resident safety during normal activities at the subject property.

8.21 Mold

Bureau Veritas performed a limited visual assessment for the presence of mold, conditions conducive to mold, and evidence of moisture in readily accessible interior areas of the subject property. Moisture conditions including water damaged finishes and suspect fungal growth were observed throughout the vacant apartment units entered. In addition, the Key Site Manager indicated that suspect fungal growth is present in the bathroom, living room, and kitchen areas of multiple apartment units. The size of the areas affected by the moisture was not reported to BV.

This assessment does not constitute a comprehensive mold survey of the subject property. The reported observations and conclusions are based solely on interviews with subject property personnel and conditions as observed in readily accessible interior areas of the subject property on the assessment date.

8.22 Contaminated Sites

The subject property is not suspected nor known to be contaminated with a hazardous substance or petroleum product.

8.23 Environmental Justice

The subject property is currently developed affordable housing. The subject property requires rehabilitation due to general due to age and use, as well as the changing needs of the community. The project is therefore being pursued in order to replace aging buildings and systems, add a community building and other amenities, and improve the accessibility, energy efficiency, and the overall appearance of the property. As such, this project will strengthen the community's supply of safe, decent, and sanitary affordable housing. No environmental justice issues were identified with the current and expected use.

8.24 Underground Mines, Sink Holes, or Tunnels

Based on a review of the Ohio Department of Natural Resources (ODNR) Abandoned Underground Mine Locator Map, the subject property is not located in an underground mine proximity region.

8.25 Air Quality

The subject property's management district or county is in maintenance status for 8-Hour Ozone (2008 and 2015 standards). Based on the project description, this project does not exceed *de minimis* emissions levels or the screening level established by the state or air quality management district for the pollutants identified above. The project does not constitute a new stationary source of air pollution and will ultimately reduce the number of residential units at the subject property, resulting in less vehicular traffic. The project is in compliance with the Clean Air Act.

8.26 Histoplasmosis

Bird or bat infestations were not observed at the time of the on-site reconnaissance. In addition, no accumulation of bird droppings or bat guano was observed.

9. FINDINGS / OPINIONS / CONCLUSIONS

The following summarizes the independent conclusions representing BV's best professional judgment based on information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by the Client, owner, or their representative have been assumed to be correct and complete. Additionally, the conclusions presented are based on the conditions that existed at the time of the assessment.

9.1 Findings and Opinions

9.1.1 ASTM E 1527-21 Scope Considerations

9.1.1.1 Adjacent Properties (Section 3.3)

- BV identified no adjacent properties that are anticipated to have a negative impact on the environmental integrity of the subject property. No further action or investigation is recommended regarding the adjacent properties.

9.1.1.2 Regulatory Review (Section 5.2)

- Based on review of the regulatory database report, the subject property is listed on the ERNS database for a report of a natural gas leak. On-site evaluation and review of available information did not indicate evidence of a release at the subject property. No further action or investigation is recommended regarding the on-site regulatory review.
- Based on review of the regulatory database report, none of the sites listed are anticipated to have an impact on the subject property. No further action or investigation is recommended regarding the off-site regulatory review.

9.1.1.3 Tier I Vapor Encroachment Screening (Section 5.4)

- A VEC does not exist and is not likely to exist at the subject property. No further action or investigation is recommended regarding vapor encroachment at the subject property.

9.1.1.4 Historical Review (Section 5.6 & 5.7)

- The review of the historical data available for the subject property and surrounding area revealed no evidence that may have led to an environmental impact to the subject property. No further action or investigation is recommended regarding historical uses.

9.1.1.5 Surface Areas (Section 6.3.1)

- No issues associated with surface areas were identified. No further action or investigation is recommended regarding surface areas at the subject property.

9.1.1.6 Exterior Facility Storage Tanks (above or below ground) (Section 6.3.2)

- No evidence of storage tanks (above or below ground) was identified on the exterior of the subject property. No further action or investigation is recommended regarding storage tanks at the subject property.

9.1.1.7 Operational Activities (Section 6.4.1)

- BV observed no circumstances of environmental concern associated with the operational activities at the subject property. No further action or investigation is recommended regarding operational activities at the subject property.

9.1.1.8 Hazardous Materials / Petroleum Products (Section 6.4.2)

- The subject property is not involved in the use of petroleum products; however, the subject property is involved in the use of hazardous materials in the form of routine janitorial and maintenance supplies. The identified materials appear to be properly stored. The materials observed do not appear to pose a hazard to the subject property, provided they continue to be used as designed, are properly handled, and all regulations regarding their use are followed. No further action or investigation is recommended regarding the use of hazardous materials or petroleum products at the subject property.

9.1.1.9 Polychlorinated Biphenyls (PCBs) (Sections 6.3.3 and 6.4.3)

- BV identified utility-owned owned transformers at the subject property that are assumed to be “Non-PCB” based on the apparent installation date (after 1979). This equipment appeared to be in good condition with no evidence of leaks. No further action or investigation is recommended regarding the transformers at the subject property.

9.1.1.10 Wastes (Section 6.4.4)

- The subject property is not involved in the generation, treatment, storage, or disposal of hazardous, medical, or regulated wastes; however, the subject property generates non-hazardous solid and liquid wastes. Generated wastes appear to be stored and disposed of properly. No further action or investigation is recommended regarding wastes at the subject property.

9.1.1.11 Interior Facility Storage Tanks (above or below ground) (Section 6.4.5)

- No evidence of storage tanks (above or below ground) was identified on the interior of the subject property. No further action or investigation is recommended regarding storage tanks at the subject property.

9.1.2 Non-ASTM E 1527-21 Scope and HUD Scope of Work Considerations

9.1.2.1 Lead Based Paint (Section 8.1)

- Based on the 1958 date of construction, there is potential that the paint at the subject property is lead-based. A Lead-Based Paint Inspection and Lead Paint Risk Assessment was performed at the subject property in June 2023. Results of the assessment indicate that no lead painted components were identified. However, a lead dust hazard was identified on the living room floor of Unit 1902. The area with the lead dust hazard should be addressed using special wet cleaning of the affected area. Minimum specifications include HEPA vacuuming, wet wiping, and a final HEPA vacuuming. The USEPA requires clearance sampling following abatement activities.

A copy of the survey report is included in the appendices. In addition, the subject property currently has on-file a Lead-Based Paint Operations and Maintenance (O&M) Program, prepared by Bureau Veritas and dated June 28, 2023.

9.1.2.2 Asbestos-Containing Materials (Section 8.2)

- Based on the date of construction (pre January 1, 1978), ACM testing was performed in June 2023. Multiple suspect ACMs were identified during the course of the baseline survey. Samples of various suspect materials were collected based on friability and condition of the materials as observed by the Asbestos Inspector. Of the 1,506 samples analyzed, 172 materials were found to contain asbestos. Asbestos abatement procedures should be included in planned construction specifications and all ACM should be abated as part of the demolition/rehabilitation activities in accordance with local, state, and federal regulations. A copy of the Inspection Report (BV Project No. 156846.22R000-001.086) including complete results, findings and conclusions is appended. In addition, the subject property currently has on-file an Asbestos-Containing Materials Operations and Maintenance (O&M) Plan, prepared by Bureau Veritas and dated June 20, 2023. The remaining materials can be maintained in place with implementation of the Asbestos O&M Plan. A properly designed O&M Program is sufficient to maintain the development in accordance with current regulatory standards.

9.1.2.3 Radon Gas (Section 8.3)

- Sampling for radon gas was conducted at the subject property in 2022. Based on the results of laboratory analysis, several locations were identified with radon gas concentrations above the USEPA action level of 4.0 pCi/L. An executed contract for installation of the radon mitigation systems was provided by the user to address this concern and is included in the appendices. A Radon Mitigation Operations and Maintenance (O&M) Program is required to ensure the proper maintenance of the mitigation systems that will be installed, as well as any others that might be installed in the future. Otherwise, no further action or investigation is recommended regarding radon.

9.1.2.4 Floodplain (Section 8.4)

- The subject property is located outside the 100-year and 500-year floodplains. Furthermore, there is no current development within a floodplain, and there is no proposed development within a floodplain. No further action or investigation is recommended regarding floodplains.

9.1.2.5 Wetlands (Section 8.5)

- No wetland areas are indicated at the subject property or adjacent properties. No further action or investigation is recommended regarding wetlands.

9.1.2.6 Landfills (Section 8.6)

- Review of regulatory databases indicates that there are no active or inactive landfills located within 3,000 feet of the subject property. No further action or investigation is recommended regarding landfills.

9.1.2.7 Sole Source Aquifer Recharge Area (Section 8.7)

- Based on review of the Designated Sole Source Aquifers Nationally Map, published by the United States Environmental Protection Agency (USEPA), the subject property is not located in an area with a sole source aquifer. No further action or investigation is recommended regarding sole source aquifers.

9.1.2.8 Coastal Barriers (Section 8.8)

- Based on the review of the USFWS Coastal Barrier Resources System Mapper, the subject property is not located within a designated coastal barrier as established by the U.S. Congress through the Coastal Barrier Improvement Act. No further action or investigation is recommended regarding coastal barriers.

9.1.2.9 Farmlands Protection (Section 8.9)

- Review of the USDA Web Soil Survey indicated that prime farmland regulated under the Farmland Protection Policy Act is not present at the project location. This project is in compliance with the Farmlands Protection Policy Act. No further action or investigation is recommended regarding farmlands protection.

9.1.2.10 Coastal Zone Management (Section 8.10)

- Based on the review of Coastal Zone Boundary map published by the Ohio Department of Natural Resources, the subject property is not located in a designated Coastal Management Zone. No further action or investigation is recommended regarding coastal zone management.

9.1.2.11 Endangered or Threatened Species or Habitat (Section 8.11)

- The project will involve new construction and ground disturbance. BV has reviewed information on the US Fish and Wildlife Service mapper, NOAA Fisheries, and the Ohio Natural Heritage Program to determine whether any federally listed threatened or endangered species, or their habitat, may exist on or in close proximity to the subject property. Based on review of these resources, it is possible that the project could impact up to three threatened, endangered, or candidate species. Final critical habitat has been designated for one of these species, the Indiana Bat. The subject property does not contain any of the critical habitat designated for this species. Therefore, the potential for impact to this species from the proposed new construction is not anticipated. One of the species

(Northern Long-eared Bat) is noted to require only the streamlined review process. The subject property consists of a developed area consisting of buildings, landscaping, and paved areas. The habitat of the Northern Long-eared Bat generally consists of caves and mines in the winter, and forested areas in the remainder of the year. The Northern Long-eared Bat tends to select areas based on the availability of roosting cavities in trees and under bark. The proposed new construction is expected to take place in previously developed areas and will not result in the removal of any trees at the subject property. Therefore, it is BV's opinion that the proposed new construction will have no effect on this species or habitat associated with this species. The Monarch Butterfly is currently a Candidate species. There is no available data that would suggest that the proposed new construction would result in impact to the Monarch Butterfly species. Therefore, this project has been determined to have No Effect on listed species. This project is in compliance with the Endangered Species Act without mitigation. No further action or investigation is recommended regarding endangered or threatened species or habitat.

9.1.2.12 Historic Preservation (Section 8.12)

- The Nelson Park Apartments have been determined by the Ohio State Historic Preservation Office (SHPO) to be potentially eligible for listing in the National Register of Historic Places under Criterion A for its role and story of the effects of urban renewal in Columbus. The SHPO reviewed the plans for rehabilitation and issued a letter to HUD dated February 8, 2023 of No Adverse Effect on historic properties provided that the planned work was completed as proposed and that the finished work would be submitted to the Technical Preservation Services department of the SHPO and the National Park Services for approval.

9.1.2.13 Noise (Section 8.13)

- Based on the Normally Unacceptable noise level at the subject property, per HUD Guidelines, the project architect completed an evaluation of the interior noise level using the HUD Sound Transmission Classification Assessment Tool (*STraCAT*). The sound attenuation of the building components mitigated the interior noise level to an acceptable level, and no further action or investigation is recommended.

9.1.2.14 Rail Lines (Section 8.14)

- There are no right-of-ways for surface-level railroads within 100 feet of the subject property boundary. No further action or investigation is recommended regarding rail lines.

9.1.2.15 Explosive or Flammable Hazards (Section 8.15)

- Within a one mile radius of the subject property, there is no direct line of sight from any part of the subject property to any hazard, nor is there a hazard in the near vicinity which is not shielded from the subject property by topography. No further action or investigation is recommended regarding Explosive or Flammable Hazards.

9.1.2.16 Natural Gas or Petroleum Pipelines (Section 8.16)

- Visual observations identified surface markings indicating the existence of a natural gas pipeline on the northwestern portion of the subject property and along the northern property boundary. HUD Guidelines indicate that the operating pressure of the pipeline should be identified to evaluate the potential hazards to the on-site

residents. Bureau Veritas contacted a utility representative for additional information concerning the pipeline. According to the representative, the pipeline is low pressure. No further action or investigation is recommended regarding natural gas or petroleum pipelines.

9.1.2.17 High Voltage Power Transmission or Other Towers (Section 8.17)

- The on-site buildings are not located within the easement of any overhead high voltage transmission line. In addition, the on-site buildings are also not located within the engineered fall distance of any high voltage power transmission, radio antennae, satellite, cellular, or other towers. No further action or investigation is recommended regarding high voltage transmission or other towers.

9.1.2.18 Airport Hazards (Section 8.16)

- The subject property is not located within 2,500 feet from the end of a civil airport runway or 15,000 feet from the end of a runway at a military airfield. No further action or investigation is recommended regarding airport hazards.

9.1.2.19 Oil and Gas Operations (Section 8.19)

- The subject property is not located in an area with traffic hazards that could directly impact the subject property and/or subject property resident safety during normal activities at the subject property. No further action or investigation is recommended regarding traffic hazards.

9.1.2.20 Traffic Hazards (Section 8.20)

- The subject property is not located in an area with traffic hazards that could directly impact the subject property and/or subject property resident safety during normal activities at the subject property. No further action or investigation is recommended regarding traffic hazards.

9.1.2.21 Mold (Section 8.21)

- Bureau Veritas performed a limited visual assessment for the presence of mold, conditions conducive to mold, and evidence of moisture in readily accessible interior areas of the subject property. Moisture conditions including water damaged finishes and suspect fungal growth were observed throughout the vacant apartment units entered. In addition, the Key Site Manager indicated that suspect fungal growth is present in the bathroom, living room, and kitchen areas of multiple apartment units. The size of the areas affected by the moisture was not reported to BV.
- BV recommends that the moisture conditions be investigated and remediated by a licensed contractor in accordance with industry standards and best practices prior to occupation. Furthermore, the source of the moisture should be investigated and corrected in accordance with industry standards.

9.1.2.22 Contaminated Sites (Section 8.22)

- The subject property is not suspected nor known to be contaminated with a hazardous substance or petroleum product. No further action or investigation is recommended regarding contaminated sites.

9.1.2.23 Environmental Justice (Section 8.23)

- The subject property is currently developed with affordable housing. The subject property requires rehabilitation due to general due to age and use, as well as the changing needs of the community. The project is therefore being pursued in order to replace aging buildings and systems, add a community building and other amenities, and improve the accessibility, energy efficiency, and the overall appearance of the property. As such, this project will strengthen the community's supply of safe, decent, and sanitary affordable housing. No environmental justice issues were identified with the current and expected use. No further action or investigation is recommended regarding environmental justice.

9.1.2.24 Underground Mines, Sink Holes, or Tunnels (Section 8.24)

- Based on a review of the Ohio Department of Natural Resources (ODNR) Abandoned Underground Mine Locator Map, the subject property is not located in an underground mine proximity region. No further action or investigation is recommended regarding underground mines, sink holes, or tunnels.

9.1.2.25 Air Quality (Section 8.25)

9.1.2.26 Histoplasmosis (Section 8.26)

- Bird or bat infestations were not observed at the time of the on-site reconnaissance. In addition, no accumulation of bird droppings or bad guano was observed. No further action or investigation is recommended regarding histoplasmosis.

9.2 Recommendations

BV recommends the following:

Recommendation	Estimated Cost
The area with the lead dust hazard (living room floor, Unit 1902) should be addressed using special wet cleaning of the affected area. Minimum specifications include HEPA vacuuming, wet wiping, and a final HEPA vacuuming. The USEPA requires clearance sampling following abatement activities.	To Be Determined
Asbestos abatement procedures should be included in planned construction specifications and all ACM should be abated as part of the demolition/rehabilitation activities in accordance with local, state, and federal regulations. The remaining materials can be maintained in place with implementation of the Asbestos O&M Plan.	Not applicable

Recommendation	Estimated Cost
Per HUD Guidelines, a Radon Mitigation Operations and Maintenance (O&M) Program is required to ensure the proper maintenance of the mitigation systems that are currently in place, as well as any others that might be installed in the future. The Program should be developed by the radon mitigation system installation contractor.	Not applicable
BV recommends that the moisture conditions be investigated and remediated by a licensed contractor in accordance with industry standards and best practices prior to occupation. Furthermore, the source of the moisture should be investigated and corrected in accordance with industry standards.	To Be Determined

Applicant / Grant Recipient: Renewal Housing Associates, LLC

Point of Contact: Kelan Craig (kcraig@renewalhousing.com)

HUD Preparer: John Storen

Consultant (if applicable): Bureau Veritas

Point of Contact: Joslyn Smith

Project Location: 1994 Maryland Ave, Columbus, OH 43219

Additional Location Information:

N/A

Description of the Proposed Project [24 CFR 50.12 & 58.32; 40 CFR 1508.25]:

Nelson Park Apartments is a multifamily residential development and contains 177 apartment units on approximately 9.46 acres of land. The subject property was constructed in 1958, with renovations in the late 1970s. Subject property improvements consist of 45 two-story buildings, a maintenance building, an office/community building, paved parking and drive areas, and landscaping. Properties in the immediate vicinity of the site include residential and general commercial uses. The proposed action involves a transfer of the

existing HUD Mark-to-Market Use Agreement from Nelson Park Apartments to another property, known as Warren Heights Apartments. In addition, the Section 8 PBRA HAP Contract for Nelson Park Apartments will be bifurcated and transferred under Section 8(bb) to another property, known as Ivywood Apartments. Finally, the subject property is being submitted under HUD MAP 221(d)(4) mortgage insurance for rental and cooperative housing. The undertaking will involve moderate rehabilitation to the existing development, construction of four additional buildings within the existing site boundaries, and demolition of the existing maintenance and utility buildings and three existing buildings and associated paved parking on the western end of the development. The project scope includes reducing the number of residential units, adding ADA compliant units, improving plumbing, updating HVAC systems, adding a community building, and updating interior electrical units. The redevelopment will result in 137 units in 41 residential buildings with one-, two- and three-bedroom townhomes serving both families and seniors, 100% of which are covered by a HUD Section 8 HAP contract. A Conceptual Redevelopment Plan is attached. The project site is located in an established urban area with existing community services, and enjoys proximity to major employers as well as various retail, health care, and recreational facilities.

Does this project involve over 200 lots, dwelling units, or beds?

✓ No

Yes (Consult early with the Environmental Clearance Officer (ECO), who is required to sign off on this project if it requires an Environmental Assessment)

Statement of Purpose and Need for the Proposal [40 CFR 1508.9(b)]:

The property requires rehabilitation due to general due to age and use, as well as the changing needs of the community. This rehabilitation project is therefore being pursued in order to replace aging buildings and systems, add a community building and other amenities, and improve the accessibility, energy efficiency, and the overall appearance of the property. As such, this project will strengthen the City of Columbus' supply of safe, decent, and sanitary affordable housing.

Existing Conditions and Trends [24 CFR 58.40(a)]:

Originally constructed in 1958, the property has not received a substantial rehabilitation since 1980. Preservation of this asset for the near east side community is critically important as rents and home values continue to escalate while affordability continues to decline. Properties in the immediate vicinity of the project include single-family residences and commercial properties, including an Amazon warehouse and distribution facility to the north. Most of the properties in the neighborhood maintain an acceptable level of property maintenance and condition. These trends would likely continue in the absence of the project.

Maps, photographs, and other documentation of project location and description:

[Nelson Park Site Photographs.pdf](#)

Determination:

	Finding of No Significant Impact [24 CFR 58.40(g)(1); 40 CFR 1508.13] The project will not result in a significant impact on the quality of human environment
	Finding of Significant Impact

Funding Information

Grant / Project Identification Number	HUD Program	Program Name
TBD	Housing: Multifamily FHA	Other Multifamily FHA Program
TBD	Housing: Multifamily FHA	Section 221(d)(4). Mortgage Insurance for new construction or substantial rehabilitation of Multifamily Rental Housing - profit-motivated sponsors

Estimated Total HUD Funded, Assisted or Insured Amount: \$0.00

Estimated Total Project Cost [24 CFR 58.2 (a) (5)]: \$0.00

Compliance with 24 CFR §50.4, §58.5 and §58.6 Laws and Authorities

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §50.4, §58.5, and §58.6	Are formal compliance steps or mitigation required?	Compliance determination (See Appendix A for source determinations)
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR §50.4 & § 58.6		
Airport Hazards Clear Zones and Accident Potential Zones; 24 CFR Part 51 Subpart D	<input type="checkbox"/> Yes <input type="checkbox"/> No	Review of the USEPA NEPAassist tool and available mapping resources indicated that the project site is not within 15,000 feet of a military airport or 2,500 feet of a civilian airport. The project is in compliance with Airport Hazards requirements.

<p>Coastal Barrier Resources Act Coastal Barrier Resources Act, as amended by the Coastal Barrier Improvement Act of 1990 [16 USC 3501]</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>According to review of the U.S. Fish and Wildlife Service Coastal Barrier Resources System Mapper, this project is not located in a CBRS Unit. Therefore, this project has no potential to impact a CBRS Unit and is in compliance with the Coastal Barrier Resources Act.</p>
<p>Flood Insurance Flood Disaster Protection Act of 1973 and National Flood Insurance Reform Act of 1994 [42 USC 4001-4128 and 42 USC 5154a]</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>Review of the FEMA Flood Insurance Rate Map (Community/Panel No. 39049C0327K, dated June 17, 2008) indicated that the structure or insurable property is not located in a FEMA-designated Special Flood Hazard Area. No preliminary or pending FEMA maps were identified on file for the project location. The project is located within the City of Columbus, which is a participating community under the NFIP (Community ID: 390170). While flood insurance may not be mandatory in this instance, HUD recommends that all insurable structures maintain flood insurance under the National Flood Insurance Program (NFIP). The project is in compliance with flood insurance requirements.</p>
<p>STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR §50.4 & § 58.5</p>		
<p>Air Quality Clean Air Act, as amended, particularly section 176(c) & (d); 40 CFR Parts 6, 51, 93</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>The project's management district or county is in maintenance status for 8-Hour Ozone (2008 and 2015 standards). Based on the project description, this project does not exceed de minimis emissions levels or the screening level established by the state or air quality management district for the pollutants identified above. The project does not constitute a new stationary source of air pollution and will ultimately reduce the number of residential units at the project, resulting in less vehicular traffic. The project is in compliance with the Clean Air Act.</p>
<p>Coastal Zone Management Act Coastal Zone Management Act, sections 307(c) & (d)</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>Based on review of the Coastal Zone Boundary map published by the Ohio Department of Natural Resources, this</p>

		<p>project is not located in or does not affect a Coastal Zone as defined in the state Coastal Management Plan. The project is in compliance with the Coastal Zone Management Act.</p>
<p>Contamination and Toxic Substances 24 CFR 50.3(i) & 58.5(i)(2)]</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>Site contamination was evaluated as follows: ASTM Phase I ESA, ASTM Vapor Encroachment Screening. On-site or nearby toxic, hazardous, or radioactive substances that could affect the health and safety of project occupants or conflict with the intended use of the property were not found. The project is in compliance with contamination and toxic substances requirements.</p>
<p>Endangered Species Act Endangered Species Act of 1973, particularly section 7; 50 CFR Part 402</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>The project will involve new construction and ground disturbance. Bureau Veritas has reviewed information on the US Fish and Wildlife Service mapper, NOAA Fisheries, and the Ohio Natural Heritage Program to determine whether any federally listed threatened or endangered species, or their habitat may exist on or in close proximity to the project. Based on review of these resources, it is possible that the project could impact up to three threatened, endangered, or candidate species. Final critical habitat has been designated for one of these species, the Indiana Bat. The project does not contain any of the critical habitat designated for this species. Therefore, the potential for impact to this species from the proposed new construction is not anticipated. One of the species (Northern Long-eared Bat) is noted to require only the streamlined review process. The project consists of a developed area consisting of buildings, landscaping, and paved areas. The habitat of the Northern Long-eared Bat generally consists of caves and mines in the winter, and forested areas in the remainder of the year. The Northern Long-eared Bat tends to select areas</p>

		<p>based on the availability of roosting cavities in trees and under bark. The proposed new construction is expected to take place in previously developed areas and will not result in the removal of any trees at the project. Therefore, it is Bureau Veritas's opinion that the proposed new construction will have no effect on this species or habitat associated with this species. The Monarch Butterfly is currently a Candidate species. There is no available data that would suggest that the proposed new construction would result in impact to the Monarch Butterfly species. Therefore, this project has been determined to have No Effect on listed species. This project is in compliance with the Endangered Species Act without mitigation.</p>
<p>Explosive and Flammable Hazards Above-Ground Tanks)[24 CFR Part 51 Subpart C</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>Within a 1 mile radius of the project, there is no direct line of sight from any part of the project to any hazard, nor is there a hazard in the near vicinity which is not shielded from the project by topography. The project is in compliance with Explosive and Flammable Hazards requirements</p>
<p>Farmlands Protection Farmland Protection Policy Act of 1981, particularly sections 1504(b) and 1541; 7 CFR Part 658</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>This project includes activities that could potentially convert agricultural land to a non-agricultural use, but an exemption applies. Review of the US Census Bureau TIGERweb application and available topographic maps indicated that the project is located on land already in or committed to urban development. Therefore, the project is exempt from compliance with the Farmland Protection Policy Act (7 CFR 658.2(a)).</p>
<p>Floodplain Management Executive Order 11988, particularly section 2(a); 24 CFR Part 55</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>Review of the FEMA Flood Insurance Rate Map (Community/Panel No. 39049C0327K, dated June 17, 2008) indicated that this project does not occur in a floodplain. No preliminary or pending FEMA maps were identified on</p>

		file for the project location. The project is in compliance with Executive Order 11988.
<p>Historic Preservation National Historic Preservation Act of 1966, particularly sections 106 and 110; 36 CFR Part 800</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>The Nelson Park Apartments have been determined by the Ohio State Historic Preservation Office (SHPO) to be potentially eligible for listing in the National Register of Historic Places under Criterion A for its role and story of the effects of urban renewal in Columbus. The SHPO reviewed the plans for rehabilitation and issued a letter to HUD dated February 8, 2023 of No Adverse Effect on historic properties provided that the planned work was completed as proposed and that the finished work would be submitted to the Technical Preservation Services department of the SHPO and the National Park Services for approval. The project is in compliance with Section 106.</p>
<p>Noise Abatement and Control Noise Control Act of 1972, as amended by the Quiet Communities Act of 1978; 24 CFR Part 51 Subpart B</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>The project includes new construction activities. The project property is located within 1,000 feet of a busy road and highway; 3,000 feet of two railroads; five miles of a civil airport; and 15 miles of a military airport. The busy road, Nelson Road, is located east adjacent to the project. The highway, Interstate 670, is located approximately 970 feet to the north of the project. A portion of the Norfolk Southern Railway is located approximately 140 feet to the west, and a portion of the Columbus & Ohio River Railroad is located approximately 765 feet to the north. The civil airport, John Glenn Columbus International Airport, is located approximately 2.2 miles to the northeast. The military airport, Rickenbacker International Airport (which includes Ohio National Air Guard flight operations and general civil aviation and commercial flight operations) is located approximately</p>

		<p>10.3 miles to the southeast. Based on proximity of the noise sources, Bureau Veritas conducted a noise study for the project. The noise study was conducted using methodology prescribed in the HUD Noise Guidebook and the On-Line HUD Site DNL Calculator. Based on the results of the noise study, the exterior noise level at the project was calculated to be 73 decibels (dB), which is defined by HUD as Normally Unacceptable. The projected 10-year exterior noise level at the project is 74 dB, which is also defined by HUD as Normally Unacceptable. The project architect evaluated the interior noise level using the HUD Sound Transmission Classification Assessment Tool (STraCAT). The sound attenuation was determined to be acceptable. The project is in compliance with HUD's Noise regulation without mitigation.</p>
<p>Sole Source Aquifers Safe Drinking Water Act of 1974, as amended, particularly section 1424(e); 40 CFR Part 149</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>Review of the USEPA Interactive Map of Sole Source Aquifers indicated that the project is not located on a Sole Source Aquifer. The project is in compliance with Sole Source Aquifer requirements.</p>
<p>Wetlands Protection Executive Order 11990, particularly sections 2 and 5</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>Based on a review of the U.S. Fish & Wildlife Service National Wetlands Inventory (NWI) map, no wetlands were identified on the project site or vicinity. Therefore, the project is not anticipated to impact an on- or off-site wetland. The project is in compliance with Executive Order 11990.</p>
<p>Wild and Scenic Rivers Act Wild and Scenic Rivers Act of 1968, particularly section 7(b) and (c)</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>	<p>Based on review of the National Wild & Scenic Rivers System maintained by the U.S. Bureau of Land Management, National Park Service, US Fish and Wildlife Service, and US Forest Service, as well as the NEPAssist tool, this project is not within proximity of a NWSRS river. The project is in compliance with the Wild and Scenic Rivers Act.</p>

HUD HOUSING ENVIRONMENTAL STANDARDS		
Housing Requirements (50) [MAP Guide - Chapter 9: Lead-based paint, Radon, and Asbestos]	<input type="checkbox"/> Yes <input type="checkbox"/> No	See appendix for compliance with Housing Requirements.
ENVIRONMENTAL JUSTICE		
Environmental Justice Executive Order 12898	<input type="checkbox"/> Yes <input type="checkbox"/> No	Nelson Park Apartments was constructed in 1958 to provide assistance in creating housing opportunities for people who were displaced by the demolition surrounding the Goodale Expressway project under Urban Renewal. These units were requested and authorized by the FHA in anticipation that a large portion of them would be available to families of color who were about to be displaced by the new expressway construction and redevelopment of Goodale. In addition, review of the EJScreen report obtained from the USEPA indicated that the project site is currently located in an area with people of color and low-income populations greater than the state average. No adverse environmental conditions were identified that would result in a disproportionately high adverse human health impact or environmental impact on people of color or low income populations. Additionally, the redevelopment of the project site is designed to respond to resident concerns, improve residential density and accessibility, add neighborhood amenities, and facilitate a better connection to the surrounding neighborhood. The project is in compliance with Executive Order 12898.

Environmental Assessment Factors [24 CFR 58.40; Ref. 40 CFR 1508.8 &1508.27]

Impact Codes: An impact code from the following list has been used to make the determination of impact for each factor.

- (1)** Minor beneficial impact

- (2) No impact anticipated
- (3) Minor Adverse Impact – May require mitigation
- (4) Significant or potentially significant impact requiring avoidance or modification which may require an Environmental Impact Statement.

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
LAND DEVELOPMENT			
Conformance with Plans / Compatible Land Use and Zoning / Scale and Urban Design	2	The proposed project supports the various goals and policies in the Columbus Comprehensive Plan by bolstering the supply of affordable housing to meet the needs of families and seniors. The project site is zoned R4 (Residential), which allows for multifamily uses. The project is in conformance with city zoning requirements and is compatible with the surrounding area. The project design was selected to be compatible with the size, design, materials, and siting of the existing on-site and surrounding buildings. Based on the project description, the project will not contribute to urban sprawl or environmental injustices. No impacts are anticipated.	
Soil Suitability / Slope/ Erosion / Drainage and Storm Water Runoff	2	The project is located in an urban area and consists of an existing multi-family residential facility. No evidence of ground disturbance, seismic activity, high water table, or other unusual conditions at the site were noted during BV's site reconnaissance. The project lands are graded to provide slope and swale to direct stormwater away from the on-site buildings. Stormwater from drive and parking surfaces is directed to surface drains via sheet flow. Stormwater from vegetated surface areas generally infiltrates into the subsurface. During construction activities, the contractor is expected to ensure compliance with all local, state, and federal requirements related to sediment control, drainage, and discharge of surface runoff and stormwater from the site. Upon completion, the project will discharge stormwater to existing infrastructure.	

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
		Based on the project description, no impacts are anticipated.	
Hazards and Nuisances including Site Safety and Site-Generated Noise	2	Based on site observations and review of available planning resources, the project will not be affected by any natural hazards such as earthquakes, severe storms, floods, and forest and range fires; or by any man-made site hazards or nuisances. Additionally, the project is not a noise-generating facility. During demolition and construction activities, best practices will be employed to minimize noise, vibration, and dust. No impacts are anticipated.	
SOCIOECONOMIC			
Employment and Income Patterns	1	The City of Columbus ranks No. 1 among the 10 largest Midwest metros in private sector job growth since 2010. The city has a workforce of 1.1 million and is home to 11 Fortune 1000 headquarters operations. Area residents find employment opportunities primarily in the following sectors: trade, transportation, and utilities; professional and business services; government; education and health services; and leisure and hospitality. The average weekly wage is \$1,281 and the unemployment rate is 3.1%. The project is expected to create some temporary construction-related jobs.	
Demographic Character Changes / Displacement	2	The population of Columbus is approximately 906,528. Among this total, approximately 10% are aged 65 years and older and 22% are aged under 18. The population is largely White (57%); however, the African American population comprises the next largest group (29%). The project will be a tenant-in-place redevelopment with expected supportive services to residents, where applicable. In addition, the project will have a limited timeframe and anticipates the use of local labor. Therefore, the project is not expected to impact the physical, social, and	

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
		psychological characteristics of the community.	
Environmental Justice EA Factor	2	Based on review of an EJSscreen Report obtained for the project location from the USEPA, the project is located in an area with people of color and low-income populations greater than the state average. The surrounding land use is primarily residential and general commercial, and no significant sources of pollution or historical environmental injustices were identified during the environmental review. Furthermore, the project is limited to rehabilitation of the existing improvements and will not affect areas of local or cultural significance. No disproportional environmental and health impacts faced by low-income and/or minority communities were identified.	
COMMUNITY FACILITIES AND SERVICES			
Educational and Cultural Facilities (Access and Capacity)	2	The project location is served by Columbus City Schools. Local schools are required by law to accept students that live within their area of service. However, this project is not expected to overrun existing capacity as the number of residential units will decrease. Children living within the community are able to walk to school or take public transportation. Eastgate Elementary School is located approximately 650 feet south of the project. Cultural facilities, including the Columbus Cultural Arts Center, Wexner Center for the Arts, and Franklin Park Conservatory, are accessible via public and private transportation.	
Commercial Facilities (Access and Proximity)	2	Commercial office and retail facilities are available via public and private transportation. Local grocery stores include Kroger (2000 E Main St), Save A Lot (2200 Mock Rd), and Bexley Natural Market (508 Cassady Ave). Various restaurants, gas stations, drug stores, banks, and other commercial facilities are located within one	

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
		mile of the project. Regional shopping malls and centers include Easton Town Center (160 Easton Town Center), Polaris Fashion Place (1500 Polaris Parkway), and Graceland Shopping Center (182 Graceland Boulevard). The available goods and services should be adequate to meet the needs of community.	
Health Care / Social Services (Access and Capacity)	2	The project location is accessible to local hospitals, emergency facilities, clinics, and physician services. Hospitals within the Columbus area are equipped to handle residents. However, this project is not expected to overrun existing capacity as the number of residential units will decrease. Nearby facilities include Ohio State East Hospital (181 Taylor Ave), OhioHealth Grant Medical Center (111 S Grant Ave), and Nationwide Children's Hospital (700 Children's Dr). Franklin County maintains Social Services offices, which are available via public and private transportation.	
Solid Waste Disposal and Recycling (Feasibility and Capacity)	2	Numerous waste disposal facilities are located throughout the greater Columbus area. Wastes generated during demolition and construction activities, as well as any waste materials containing asbestos and lead, will be removed and disposed of in accordance with professionally prepared construction specifications and in accordance with federal, state, and local regulations as part of the planned rehabilitation project. After redevelopment, the community will continue to utilize existing contracted trash collection services.	
Waste Water and Sanitary Sewers (Feasibility and Capacity)	2	Existing services are provided by the City of Columbus Division of Sewerage & Drainage. The project will not increase current occupancy and is therefore not expected to overrun existing capacity. Climate change-induced floods may increase the risk of combined sewage overflow events over the	

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
		expected life of the project; however, the city has implemented Green Infrastructure Design Guidelines to mitigate these impacts.	
Water Supply (Feasibility and Capacity)	2	The City of Columbus receives its water supply from a blend of surface water from the Scioto River and Big Walnut Creek, as well as groundwater pumped from sand and gravel deposits of the Scioto River Valley. According to the 2021 Consumer Confidence Report, the municipal water supply is within federal, state, and local drinking water quality standards. The project will not increase current occupancy and is therefore not expected to overrun existing capacity. In addition, the project is not located on a Sole Source Aquifer. Climate change may result in issues such as water shortages and/or water quality concerns over the expected life of the project. These can be mitigated with water saving measures and treatment systems.	
Public Safety - Police, Fire and Emergency Medical	2	Police, Fire, and Emergency Medical services are provided by the City of Columbus. The nearest police station (1371 Cleveland Ave) is located approximately 1.8 miles away, the nearest fire station (2646 E 5th Ave) is located approximately 0.9 miles away, and the nearest medical facility (Ohio State East Hospital, 181 Taylor Ave) is located approximately 0.7 miles away. Emergency equipment and personnel appear adequate to meet the needs of the community. Response times range from 5 minutes to 30 minutes depending upon the incident and time of day. In addition, the project is not located in an area prone to wildfires. No increase on the demand for public safety services is anticipated to occur as a result of the project.	
Parks, Open Space and Recreation (Access and Capacity)	2	The project is expected to add a play area to the property for resident use and may also add a flower garden at the western portion of the property. In addition, parks,	

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
		open space, and green space for recreation throughout the City of Columbus are available via public and private transportation. Nearby facilities include Nelson Park (430 N Nelson Rd), Jeffrey Park (165 N Parkview Ave), and Hayden Park (900 N Nelson Rd). The project will not increase the demand for parks or open space and will not result in the deterioration of existing facilities.	
Transportation and Accessibility (Access and Capacity)	2	The project is not anticipated to impact local traffic patterns since it involves an existing residential community. The project is served by the Central Ohio Transit Authority (COTA). A bus stop for Bus Route 7 is located adjacent to the project site on N Nelson Road. Major destinations include John Glenn Columbus International Airport, Easton Town Center, and Easton Transit Center, which offers connections to six other bus lines. The project currently has 10 points of vehicular ingress and egress along Maryland Avenue, which will be reduced to 5 following redevelopment. The project provides adequate on-site surface parking. Sidewalks and signals facilitate pedestrian movement. Some bike infrastructure is present. In addition, the project is not located adjacent to a highway or high traffic area which would expose the community to harmful air pollutants.	
NATURAL FEATURES			
Unique Natural Features /Water Resources	2	Based on review of project plans, site observations, aerial photography, topographic maps, and information available from the National Natural Landmarks Program, no unique natural features or water resources are present within the area of the property or visible from the property. Therefore, the project is not expected to adversely impact unique natural features or ecosystem services.	
Vegetation / Wildlife (Introduction,	2	The project is located in an urban area and consists of an existing multi-family	

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
Modification, Removal, Disruption, etc.)		residential facility. The property does not contain significant undisturbed natural areas. Landscaping is designed in a manner so as not to harm local wildlife and to fit in the overall character of the community. Furthermore, the project has been determined to have no effect on federally listed threatened or endangered species, or their habitat. No impact is anticipated.	
Other Factors 1			
Other Factors 2			
CLIMATE AND ENERGY			
Climate Change	1	As the project activities consist of rehabilitation of an existing residential development, the project is not expected to contribute significantly to climate change impacts. The project will reduce the total number of residential units at the property, resulting in decreased local vehicular traffic and energy use. In addition, the project is expected to incorporate energy saving and water saving measures through various electrical, HVAC, and plumbing upgrades. In addition, considering the project's location and residential land use, the project is not expected to be uniquely vulnerable to climate change impacts that would threaten resident safety, wellbeing, or property within the useful life of the project. According to information on the U.S. Climate Resilience Toolkit, current and future climate change impacts for urban cities in the Midwest region include extreme heat, flooding, and human health impacts such as poor air quality days, extension of pollen seasons, and modified distribution of disease-carrying pests and insects. The project is fully landscaped with mature trees, shrubs, and lawn; the buildings are equipped with air conditioning and adequate insulation; and the project is served by a municipal water	

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
		supply. Based on review of current FEMA maps, the flood risk is considered minimal for the anticipated lifespan of the project (30+ years).	
Energy Efficiency	1	The property is located proximate to transportation, retail, and community services. The project will result in five fewer residential buildings and 40 fewer residential units, thereby reducing overall energy consumption at the property. In addition, the project is expected to include energy saving construction practices and appliances that will reduce the overall utility consumption and burden to the public utilities.

Stephanie Scilingo

5/24/2022 12:00:00 AM

[Nelson Park Site Photographs.pdf](#)**List of Sources, Agencies and Persons Consulted [40 CFR 1508.9(b)]:**

See attached.

[Nelson Park List of Sources Agencies and Persons Consulted.pdf](#)**List of Permits Obtained:****Public Outreach [24 CFR 58.43]:**

To be completed by HUD.

Cumulative Impact Analysis [24 CFR 58.32]:

Based on the existing residential land use and availability of local services and amenities, cumulative impacts to the environment are expected to be minimal. The planned project is expected to produce minor beneficial environmental impacts in the form of decreased energy consumption and landscaping improvements. Any potentially adverse impacts resulting from this project are minor and include those typically of any similar scale redevelopment project. These impacts include noise attenuation, worker safety, storm water runoff, and contact with hazardous materials. The project is expected to incorporate elements to minimize these potentially negative impacts. The steps to be taken include the preparation and implementation of a project specific Health and Safety Plan and installation of sediment erosion/control features. Confirmed lead-based paint and asbestos-containing materials are to be removed and disposed of in accordance with professionally prepared construction specifications and in accordance with federal, state, and local regulations as part of the planned renovation activities. In addition, radon gas is to be mitigated through installation of mitigation systems and development and implementation of an O&M Plan.

Alternatives [24 CFR 58.40(e); 40 CFR 1508.9]

No Alternatives were considered, other than No Action.

No Action Alternative [24 CFR 58.40(e)]

The "no action" alternative would allow the property to fall into disrepair from deferred maintenance, which could lead to resident safety concerns, accessibility concerns, and the eventual obsolescence of the community.

Summary of Findings and Conclusions:

The most identifiable impacts of the project include the beneficial impacts associated with the rehabilitation of the aging housing, improvement of residential density and accessibility, and addition of neighborhood amenities. In addition, the project is expected to create a number of temporary construction jobs and energy efficiency improvements. Any potentially adverse impacts resulting from this project are minor and include those typically of any similar scale redevelopment project. These impacts include worker safety and contact with hazardous materials, which will be mitigated with best management practices. In addition, historic preservation impacts are to be mitigated with the development of a Memorandum of Agreement. Noise impacts are to be mitigated with the planned construction materials. Identified lead-based paint and asbestos are to be mitigated through abatement and implementation of Operations and Maintenance (O&M) Plans. Radon gas is to be mitigated through installation of mitigation systems and the development and implementation of an O&M Plan. No additional formal compliance steps or mitigation is recommended at this time.

Mitigation Measures and Conditions [CFR 1505.2(c)]:

Summarized below are all mitigation measures adopted by the Responsible Entity to reduce, avoid or eliminate adverse environmental impacts and to avoid non-compliance or non-conformance with the above-listed authorities and factors. These measures/conditions must be incorporated into project contracts, development agreements and other relevant documents. The staff responsible for implementing and monitoring mitigation measures should be clearly identified in the mitigation plan.

Law, Authority, or Factor	Mitigation Measure or Condition	Comments on Completed Measures	Mitigation Plan	Complete
Housing Requirements (50)	<p>The area with the lead dust hazard should be addressed using special wet cleaning of the affected area. Minimum specifications include HEPA vacuuming, wet wiping, and a final HEPA vacuuming. The USEPA requires clearance sampling following abatement activities.</p> <p>Radon mitigation systems require routine maintenance and upkeep. In addition, the fans within the units need to be replaced after approximately 7 years. The units serviced by the</p>	N/A	To be completed by project ownership and its contractors in connection with the planned renovation.	

	<p>mitigation units should be tested biennially to ensure that the systems remain effective at reducing radon concentrations below the USEPA action level. Testing of the entire property should be conducted every five years using the testing protocols described in AARST MAMF 2017, or the most recent version. In addition, per HUD Guidelines, a Radon Mitigation Operations and Maintenance (O&M) Program is required to ensure the proper maintenance of the mitigation systems that are currently in place, as well as any others that might be installed in the future.</p> <p>Asbestos abatement procedures should be included in planned construction specifications and all ACM should be abated as part of the demolition/rehabilitation activities in accordance with local, state, and federal regulations. The remaining materials can be maintained in place with implementation of the Asbestos O&M Plan.</p>

APPENDIX A: Related Federal Laws and Authorities

Airport Hazards

General policy	Legislation	Regulation
It is HUD's policy to apply standards to prevent incompatible development around civil airports and military airfields.		24 CFR Part 51 Subpart D

1. To ensure compatible land use development, you must determine your site's proximity to civil and military airports. Is your project within 15,000 feet of a military airport or 2,500 feet of a civilian airport?

✓ No

Based on the response, the review is in compliance with this section. Document and upload the map showing that the site is not within the applicable distances to a military or civilian airport below

Yes

Screen Summary

Compliance Determination

Review of the USEPA NEPAAssist tool and available mapping resources indicated that the project site is not within 15,000 feet of a military airport or 2,500 feet of a civilian airport. The project is in compliance with Airport Hazards requirements.

Supporting documentation

[Nelson Park Airport Locator Map.pdf](#)

Are formal compliance steps or mitigation required?

Yes

No

Coastal Barrier Resources

General requirements	Legislation	Regulation
HUD financial assistance may not be used for most activities in units of the Coastal Barrier Resources System (CBRS). See 16 USC 3504 for limitations on federal expenditures affecting the CBRS.	Coastal Barrier Resources Act (CBRA) of 1982, as amended by the Coastal Barrier Improvement Act of 1990 (16 USC 3501)	

1. Is the project located in a CBRS Unit?

✓ No

Document and upload map and documentation below.

Yes

Compliance Determination

According to review of the U.S. Fish and Wildlife Service Coastal Barrier Resources System Mapper, this project is not located in a CBRS Unit. Therefore, this project has no potential to impact a CBRS Unit and is in compliance with the Coastal Barrier Resources Act.

Supporting documentation

[Nelson Park Coastal Barrier Resources Map.pdf](#)

Are formal compliance steps or mitigation required?

Yes

No

Flood Insurance

General requirements	Legislation	Regulation
Certain types of federal financial assistance may not be used in floodplains unless the community participates in National Flood Insurance Program and flood insurance is both obtained and maintained.	Flood Disaster Protection Act of 1973 as amended (42 USC 4001-4128)	24 CFR 50.4(b)(1) and 24 CFR 58.6(a) and (b); 24 CFR 55.1(b).

1. Does this project involve financial assistance for construction, rehabilitation, or acquisition of a mobile home, building, or insurable personal property?

No. This project does not require flood insurance or is excepted from flood insurance.

Yes

2. Upload a FEMA/FIRM map showing the site here:

[Nelson Park FEMA FIRM.pdf](#)

The Federal Emergency Management Agency (FEMA) designates floodplains. The [FEMA Map Service Center](#) provides this information in the form of FEMA Flood Insurance Rate Maps (FIRMs). For projects in areas not mapped by FEMA, use the best available information to determine floodplain information. Include documentation, including a discussion of why this is the best available information for the site. Provide FEMA/FIRM floodplain zone designation, panel number, and date within your documentation.

Is the structure, part of the structure, or insurable property located in a FEMA-designated Special Flood Hazard Area?

No

Based on the response, the review is in compliance with this section.

Yes

4. While flood insurance is not mandatory for this project, HUD strongly recommends that all insurable structures maintain flood insurance under the National Flood Insurance Program (NFIP). Will flood insurance be required as a mitigation measure or condition?

Yes

✓ No

Screen Summary**Compliance Determination**

Review of the FEMA Flood Insurance Rate Map (Community/Panel No. 39049C0327K, dated June 17, 2008) indicated that the structure or insurable property is not located in a FEMA-designated Special Flood Hazard Area. No preliminary or pending FEMA maps were identified on file for the project location. The project is located within the City of Columbus, which is a participating community under the NFIP (Community ID: 390170). While flood insurance may not be mandatory in this instance, HUD recommends that all insurable structures maintain flood insurance under the National Flood Insurance Program (NFIP). The project is in compliance with flood insurance requirements.

Supporting documentation**Are formal compliance steps or mitigation required?**

Yes

No

Air Quality

General requirements	Legislation	Regulation
The Clean Air Act is administered by the U.S. Environmental Protection Agency (EPA), which sets national standards on ambient pollutants. In addition, the Clean Air Act is administered by States, which must develop State Implementation Plans (SIPs) to regulate their state air quality. Projects funded by HUD must demonstrate that they conform to the appropriate SIP.	Clean Air Act (42 USC 7401 et seq.) as amended particularly Section 176(c) and (d) (42 USC 7506(c) and (d))	40 CFR Parts 6, 51 and 93

1. Does your project include new construction or conversion of land use facilitating the development of public, commercial, or industrial facilities OR five or more dwelling units?

Yes

No

Air Quality Attainment Status of Project's County or Air Quality Management District

2. Is your project's air quality management district or county in non-attainment or maintenance status for any criteria pollutants?

No, project's county or air quality management district is in attainment status for all criteria pollutants.

Yes, project's management district or county is in non-attainment or maintenance status for the following criteria pollutants (check all that apply):

Carbon Monoxide

Lead

Nitrogen dioxide

Sulfur dioxide

- ✓ Ozone
- Particulate Matter, <2.5 microns
- Particulate Matter, <10 microns

3. What are the *de minimis* emissions levels (40 CFR 93.153) or screening levels for the non-attainment or maintenance level pollutants indicated above

Ozone 100.00 ppb (parts per million)

Provide your source used to determine levels here:

USEPA General Conformity De Minimis Tables (Note: emissions levels are provided in tons/year)

4. Determine the estimated emissions levels of your project. Will your project exceed any of the *de minimis* or threshold emissions levels of non-attainment and maintenance level pollutants or exceed the screening levels established by the state or air quality management district?

- ✓ No, the project will not exceed *de minimis* or threshold emissions levels or screening levels.

Enter the estimate emission levels:

Ozone ppb (parts per million)

Based on the response, the review is in compliance with this section.

Yes, the project exceeds *de minimis* emissions levels or screening levels.

Screen Summary

Compliance Determination

The project's management district or county is in maintenance status for 8-Hour Ozone (2008 and 2015 standards). Based on the project description, this project does not exceed *de minimis* emissions levels or the screening level established by the state or air quality management district for the pollutants identified above. The project does not constitute a new stationary source of air pollution and will ultimately reduce the number of residential units at the project, resulting in less vehicular traffic. The project is in compliance with the Clean Air Act.

Are formal compliance steps or mitigation required?

Yes

No

Contamination and Toxic Substances

General requirements	Legislation	Regulations
It is HUD policy that all properties that are being proposed for use in HUD programs be free of hazardous materials, contamination, toxic chemicals and gases, and radioactive substances, where a hazard could affect the health and safety of the occupants or conflict with the intended utilization of the property.		24 CFR 58.5(i)(2) 24 CFR 50.3(i)

1. How was site contamination evaluated? Select all that apply. Document and upload documentation and reports and evaluation explanation of site contamination below.

- American Society for Testing and Materials (ASTM) Phase I Environmental Site Assessment (ESA)
- ASTM Phase II ESA
- Remediation or clean-up plan
- ASTM Vapor Encroachment Screening
- None of the Above

2. Were any on-site or nearby toxic, hazardous, or radioactive substances found that could affect the health and safety of project occupants or conflict with the intended use of the property? (Were any recognized environmental conditions or RECs identified in a Phase I ESA and confirmed in a Phase II ESA?)

- No

Explain:

No RECs were identified in the Phase I ESA dated August 2022 (Revised June 2023).

Based on the response, the review is in compliance with this section.

Yes

Screen Summary

Compliance Determination

Site contamination was evaluated as follows: ASTM Phase I ESA, ASTM Vapor Encroachment Screening. On-site or nearby toxic, hazardous, or radioactive substances

that could affect the health and safety of project occupants or conflict with the intended use of the property were not found. The project is in compliance with contamination and toxic substances requirements.

Are formal compliance steps or mitigation required?

Yes

No

Endangered Species

General requirements	ESA Legislation	Regulations
Section 7 of the Endangered Species Act (ESA) mandates that federal agencies ensure that actions that they authorize, fund, or carry out shall not jeopardize the continued existence of federally listed plants and animals or result in the adverse modification or destruction of designated critical habitat. Where their actions may affect resources protected by the ESA, agencies must consult with the Fish and Wildlife Service and/or the National Marine Fisheries Service (“FWS” and “NMFS” or “the Services”).	The Endangered Species Act of 1973 (16 U.S.C. 1531 <i>et seq.</i>); particularly section 7 (16 USC 1536).	50 CFR Part 402

1. Does the project involve any activities that have the potential to affect species or habitats?

No, the project will have No Effect due to the nature of the activities involved in the project.

No, the project will have No Effect based on a letter of understanding, memorandum of agreement, programmatic agreement, or checklist provided by local HUD office

- ✓ Yes, the activities involved in the project have the potential to affect species and/or habitats.

2. Are federally listed species or designated critical habitats present in the action area?

No, the project will have No Effect due to the absence of federally listed species and designated critical habitat

- ✓ Yes, there are federally listed species or designated critical habitats present in the action area.

3. What effects, if any, will your project have on federally listed species or designated critical habitat?

- ✓ No Effect: Based on the specifics of both the project and any federally listed species in the action area, you have determined that the project will have absolutely no effect on listed species or critical habitat. in the action area.

Document and upload all documents used to make your determination below. Documentation should include a species list and explanation of your conclusion, and may require maps, photographs, and surveys as appropriate

May Affect, Not Likely to Adversely Affect: Any effects that the project may have on federally listed species or critical habitats would be beneficial, discountable, or insignificant.

Likely to Adversely Affect: The project may have negative effects on one or more listed species or critical habitat.

6. For the project to be brought into compliance with this section, all adverse impacts must be mitigated. Explain in detail the exact measures that must be implemented to mitigate for the impact or effect, including the timeline for implementation. This information will be automatically included in the Mitigation summary for the environmental review. If negative effects cannot be mitigated, cancel the project using the button at the bottom of this screen.

Mitigation as follows will be implemented:

- ✓ No mitigation is necessary.

Explain why mitigation will not be made here:

This project has been determined to have No Effect on federally listed species.

Screen Summary
Compliance Determination

The project will involve new construction and ground disturbance. Bureau Veritas has reviewed information on the US Fish and Wildlife Service mapper, NOAA Fisheries, and the Ohio Natural Heritage Program to determine whether any federally listed threatened or endangered species, or their habitat may exist on or in close proximity to the project. Based on review of these resources, it is possible that the project could impact up to three threatened, endangered, or candidate species. Final critical habitat has been designated for one of these species, the Indiana Bat. The project does not contain any of the critical habitat designated for this species. Therefore, the potential for impact to this species from the proposed new construction is not anticipated. One of the species (Northern Long-eared Bat) is noted to require only the streamlined review process. The project consists of a developed area consisting of buildings, landscaping, and paved areas. The habitat of the Northern Long-eared Bat generally consists of caves and mines in the winter, and forested areas in the remainder of the year. The Northern Long-eared Bat tends to select areas based on the availability of roosting cavities in trees and under bark. The proposed new construction is expected to take place in previously developed areas and will not result in the removal of any trees at the project. Therefore, it is Bureau Veritas's opinion that the proposed new construction will have no effect on this species or habitat associated with this species. The Monarch Butterfly is currently a Candidate species. There is no available data that would suggest that the proposed new construction would result in impact to the Monarch Butterfly species. Therefore, this project has been determined to have No Effect on listed species. This project is in compliance with the Endangered Species Act without mitigation.

Are formal compliance steps or mitigation required?

Yes

No

Explosive and Flammable Hazards

General requirements	Legislation	Regulation
HUD-assisted projects must meet Acceptable Separation Distance (ASD) requirements to protect them from explosive and flammable hazards.	N/A	24 CFR Part 51 Subpart C

1. Is the proposed HUD-assisted project itself the development of a hazardous facility (a facility that mainly stores, handles or processes flammable or combustible chemicals such as bulk fuel storage facilities and refineries)?

No

Yes

2. Does this project include any of the following activities: development, construction, rehabilitation that will increase residential densities, or conversion?

No

Yes

3. Within 1 mile of the project site, are there any current or planned stationary aboveground storage containers that are covered by 24 CFR 51C? Containers that are NOT covered under the regulation include:

- Containers 100 gallons or less in capacity, containing common liquid industrial fuels OR

- Containers of liquified petroleum gas (LPG) or propane with a water volume capacity of 1,000 gallons or less that meet the requirements of the 2017 or later version of National Fire Protection Association (NFPA) Code 58.

If all containers within the search area fit the above criteria, answer "No." For any other type of aboveground storage container within the search area that holds one of the flammable or explosive materials listed in Appendix I of 24 CFR part 51 subpart C, answer "Yes."

No

Based on the response, the review is in compliance with this section. Document and upload all documents used to make your determination below.

Yes

Screen Summary**Compliance Determination**

Within a 1 mile radius of the project, there is no direct line of sight from any part of the project to any hazard, nor is there a hazard in the near vicinity which is not shielded from the project by topography. The project is in compliance with Explosive and Flammable Hazards requirements

Farmlands Protection

General requirements	Legislation	Regulation
The Farmland Protection Policy Act (FPPA) discourages federal activities that would convert farmland to nonagricultural purposes.	Farmland Protection Policy Act of 1981 (7 U.S.C. 4201 et seq.)	7 CFR Part 658

1. Does your project include any activities, including new construction, acquisition of undeveloped land or conversion, that could convert agricultural land to a non-agricultural use?

Yes

No

2. Does your project meet one of the following exemptions?

- Construction limited to on-farm structures needed for farm operations.
- Construction limited to new minor secondary (accessory) structures such as a garage or storage shed
- Project on land already in or committed to urban development or used for water storage. (7 CFR 658.2(a))

Yes

Based on the response, the review is in compliance with this section. Document and upload all documents used to make your determination below.

No

Screen Summary

Compliance Determination

This project includes activities that could potentially convert agricultural land to a non-agricultural use, but an exemption applies. Review of the US Census Bureau TIGERweb application and available topographic maps indicated that the project is located on land already in or committed to urban development. Therefore, the project is exempt from compliance with the Farmland Protection Policy Act (7 CFR 658.2(a)).

55.12(c)(10)

55.12(c)(11)

None of the above

2. Upload a FEMA/FIRM map showing the site here:

[Nelson Park FEMA FIRM.pdf](#)

The Federal Emergency Management Agency (FEMA) designates floodplains. The FEMA Map Service Center provides this information in the form of FEMA Flood Insurance Rate Maps (FIRMs). For projects in areas not mapped by FEMA, use **the best available information** to determine floodplain information. Include documentation, including a discussion of why this is the best available information for the site.

Does your project occur in a floodplain?

No

Based on the response, the review is in compliance with this section.

Yes

Screen Summary**Compliance Determination**

Review of the FEMA Flood Insurance Rate Map (Community/Panel No. 39049C0327K, dated June 17, 2008) indicated that this project does not occur in a floodplain. No preliminary or pending FEMA maps were identified on file for the project location. The project is in compliance with Executive Order 11988.

Supporting documentation**Are formal compliance steps or mitigation required?**

Yes

No

Historic Preservation

General requirements	Legislation	Regulation
Regulations under Section 106 of the National Historic Preservation Act (NHPA) require a consultative process to identify historic properties, assess project impacts on them, and avoid, minimize, or mitigate adverse effects	Section 106 of the National Historic Preservation Act (16 U.S.C. 470f)	36 CFR 800 “Protection of Historic Properties” https://www.govinfo.gov/content/pkg/CFR-2012-title36-vol3/pdf/CFR-2012-title36-vol3-part800.pdf

Threshold

Is Section 106 review required for your project?

No, because the project consists solely of activities listed as exempt in a Programmatic Agreement (PA). (See the PA Database to find applicable PAs.)

No, because the project consists solely of activities included in a No Potential to Cause Effects memo or other determination [36 CFR 800.3(a)(1)].

- ✓ Yes, because the project includes activities with potential to cause effects (direct or indirect).

Step 1 – Initiate Consultation

Select all consulting parties below (check all that apply):

- ✓ State Historic Preservation Offer (SHPO) Completed

Indian Tribes, including Tribal Historic Preservation Officers (THPOs) or Native Hawaiian Organizations (NHOs)

Other Consulting Parties

Describe the process of selecting consulting parties and initiating consultation here:

Bureau Veritas submitted a request to the Ohio State Historic Preservation Officer (SHPO) for consultation in accordance with Section 106 requirements.

Document and upload all correspondence, notices and notes (including comments and objections received below).

Was the Section 106 Lender Delegation Memo used for Section 106 consultation?

- Yes
- No

Step 2 – Identify and Evaluate Historic Properties

1. **Define the Area of Potential Effect (APE), either by entering the address(es) or uploading a map depicting the APE below:**

As this is for financing and construction consistent with the current structures within the existing development, the Area of Potential Effect is limited to the current property boundaries and does not extend to adjacent properties.

In the chart below, list historic properties identified and evaluated in the APE. Every historic property that may be affected by the project should be included in the chart.

Upload the documentation (survey forms, Register nominations, concurrence(s) and/or objection(s), notes, and photos) that justify your National Register Status determination below.

Address / Location / District	National Register Status	SHPO Concurrence	Sensitive Information
Nelson Park Apartments	Eligible	Yes	<input checked="" type="checkbox"/> Not Sensitive

Additional Notes:

The Nelson Park Apartments have been determined by the Ohio State Historic Preservation Office (SHPO) to be potentially eligible for listing in the National Register of Historic Places under Criterion A for its role and story of the effects of urban renewal in Columbus.

2. **Was a survey of historic buildings and/or archeological sites done as part of the**

project?

Yes

No

Step 3 –Assess Effects of the Project on Historic Properties

Only properties that are listed on or eligible for the National Register of Historic Places receive further consideration under Section 106. Assess the effect(s) of the project by applying the Criteria of Adverse Effect. (36 CFR 800.5)] Consider direct and indirect effects as applicable as per guidance on direct and indirect effects.

Choose one of the findings below - No Historic Properties Affected, No Adverse Effect, or Adverse Effect; and seek concurrence from consulting parties.

No Historic Properties Affected

Based on the response, the review is in compliance with this section. Document and upload concurrence(s) or objection(s) below.

Document reason for finding:

No historic properties present.

Historic properties present, but project will have no effect upon them.

No Adverse Effect

Adverse Effect

Screen Summary

Compliance Determination

The Nelson Park Apartments have been determined by the Ohio State Historic Preservation Office (SHPO) to be potentially eligible for listing in the National Register of Historic Places under Criterion A for its role and story of the effects of urban renewal in Columbus. The SHPO reviewed the plans for rehabilitation and issued a letter to HUD dated February 8, 2023 of No Adverse Effect on historic properties provided that the planned work was completed as proposed and that the finished work would be submitted to the Technical Preservation Services department of the

SHPO and the National Park Services for approval. The project is in compliance with Section 106.

Are formal compliance steps or mitigation required?

Yes

No

Noise Abatement and Control

General requirements	Legislation	Regulation
HUD’s noise regulations protect residential properties from excessive noise exposure. HUD encourages mitigation as appropriate.	Noise Control Act of 1972 General Services Administration Federal Management Circular 75-2: “Compatible Land Uses at Federal Airfields”	Title 24 CFR 51 Subpart B

1. What activities does your project involve? Check all that apply:

- New construction for residential use

NOTE: HUD assistance to new construction projects is generally prohibited if they are located in an Unacceptable zone, and HUD discourages assistance for new construction projects in Normally Unacceptable zones. See 24 CFR 51.101(a)(3) for further details.

Rehabilitation of an existing residential property

A research demonstration project which does not result in new construction or reconstruction

An interstate land sales registration

Any timely emergency assistance under disaster assistance provision or appropriations which are provided to save lives, protect property, protect public health and safety, remove debris and wreckage, or assistance that has the effect of restoring facilities substantially as they existed prior to the disaster

None of the above

4. Complete the Preliminary Screening to identify potential noise generators in the vicinity (1000’ from a major road, 3000’ from a railroad, or 15 miles from an airport).

Indicate the findings of the Preliminary Screening below:

There are no noise generators found within the threshold distances above.

- ✓ Noise generators were found within the threshold distances.

5. **Complete the Preliminary Screening to identify potential noise generators in the**

Acceptable: (65 decibels or less; the ceiling may be shifted to 70 decibels in circumstances described in §24 CFR 51.105(a))

- ✓ Normally Unacceptable: (Above 65 decibels but not exceeding 75 decibels; the floor may be shifted to 70 decibels in circumstances described in §24 CFR 51.105(a))

Is your project in a largely undeveloped area?

- ✓ No

Document and upload noise analysis, including noise level and data used to complete the analysis below.

Yes

Unacceptable: (Above 75 decibels)

6. **HUD strongly encourages mitigation be used to eliminate adverse noise impacts. Explain in detail the exact measures that must be implemented to mitigate for the impact or effect, including the timeline for implementation. This information will be automatically included in the Mitigation summary for the environmental review.**

Mitigation as follows will be implemented:

- ✓ No mitigation is necessary.

Explain why mitigation will not be made here:

The project architect evaluated the interior noise level using the HUD Sound Transmission Classification Assessment Tool (STraCAT). According to the STraCAT calculations, the existing/planned wall assembly materials reduce the interior noise level to acceptable levels.

Based on the response, the review is in compliance with this section.

Screen Summary

Compliance Determination

The project includes new construction activities. The project property is located within 1,000 feet of a busy road and highway; 3,000 feet of two railroads; five miles of a civil airport; and 15 miles of a military airport. The busy road, Nelson Road, is located east adjacent to the project. The highway, Interstate 670, is located approximately 970 feet to the north of the project. A portion of the Norfolk Southern Railway is located approximately 140 feet to the west, and a portion of the Columbus & Ohio River Railroad is located approximately 765 feet to the north. The civil airport, John Glenn Columbus International Airport, is located approximately 2.2 miles to the northeast. The military airport, Rickenbacker International Airport (which includes Ohio National Air Guard flight operations and general civil aviation and commercial flight operations) is located approximately 10.3 miles to the southeast. Based on proximity of the noise sources, Bureau Veritas conducted a noise study for the project. The noise study was conducted using methodology prescribed in the HUD Noise Guidebook and the On-Line HUD Site DNL Calculator. Based on the results of the noise study, the exterior noise level at the project was calculated to be 73 decibels (dB), which is defined by HUD as Normally Unacceptable. The projected 10-year exterior noise level at the project is 74 dB, which is also defined by HUD as Normally Unacceptable. The project architect evaluated the interior noise level using the HUD Sound Transmission Classification Assessment Tool (STraCAT). The sound attenuation was determined to be acceptable. The project is in compliance with HUD's Noise regulation without mitigation.

[Nelson Park Noise Study.pdf](#)

Are formal compliance steps or mitigation required?

Yes

No

Sole Source Aquifers

General requirements	Legislation	Regulation
The Safe Drinking Water Act of 1974 protects drinking water systems which are the sole or principal drinking water source for an area and which, if contaminated, would create a significant hazard to public health.	Safe Drinking Water Act of 1974 (42 U.S.C. 201, 300f et seq., and 21 U.S.C. 349)	40 CFR Part 149

1. Does the project consist solely of acquisition, leasing, or rehabilitation of an existing building(s)?

Yes

✓ No

2. Is the project located on a sole source aquifer (SSA)?

A sole source aquifer is defined as an aquifer that supplies at least 50 percent of the drinking water consumed in the area overlying the aquifer. This includes streamflow source areas, which are upstream areas of losing streams that flow into the recharge area.

✓ No

Based on the response, the review is in compliance with this section. Document and upload documentation used to make your determination, such as a map of your project (or jurisdiction, if appropriate) in relation to the nearest SSA and its source area, below.

Yes

Screen Summary

Compliance Determination

Review of the USEPA Interactive Map of Sole Source Aquifers indicated that the project is not located on a Sole Source Aquifer. The project is in compliance with Sole Source Aquifer requirements.

Supporting documentation

Are formal compliance steps or mitigation required?

Yes

No

Wetlands Protection

General requirements	Legislation	Regulation
Executive Order 11990 discourages direct or indirect support of new construction impacting wetlands wherever there is a practicable alternative. The Fish and Wildlife Service’s National Wetlands Inventory can be used as a primary screening tool, but observed or known wetlands not indicated on NWI maps must also be processed Off-site impacts that result in draining, impounding, or destroying wetlands must also be processed.	Executive Order 11990	24 CFR 55.20 can be used for general guidance regarding the 8 Step Process.

1. Does this project involve new construction as defined in Executive Order 11990, expansion of a building’s footprint, or ground disturbance? The term "new construction" shall include draining, dredging, channelizing, filling, diking, impounding, and related activities and any structures or facilities begun or authorized after the effective date of the Order

No

Yes

2. Will the new construction or other ground disturbance impact an on- or off-site wetland? The term "wetlands" means those areas that are inundated by surface or ground water with a frequency sufficient to support, and under normal circumstances does or would support, a prevalence of vegetative or aquatic life that requires saturated or seasonally saturated soil conditions for growth and reproduction. Wetlands generally include swamps, marshes, bogs, and similar areas such as sloughs, potholes, wet meadows, river overflows, mud flats, and natural ponds.

"Wetlands under E.O. 11990 include isolated and non-jurisdictional wetlands."

No, a wetland will not be impacted in terms of E.O. 11990’s definition of new construction.

Based on the response, the review is in compliance with this section. Document and upload a map or any other relevant documentation below which explains your determination

Yes, there is a wetland that be impacted in terms of E.O. 11990’s definition of new construction.

Screen Summary

Compliance Determination

Based on a review of the U.S. Fish & Wildlife Service National Wetlands Inventory (NWI) map, no wetlands were identified on the project site or vicinity. Therefore, the project is not anticipated to impact an on- or off-site wetland. The project is in compliance with Executive Order 11990.

Are formal compliance steps or mitigation required?

Yes

No

Wild and Scenic Rivers Act

General requirements	Legislation	Regulation
The Wild and Scenic Rivers Act provides federal protection for certain free-flowing, wild, scenic and recreational rivers designated as components or potential components of the National Wild and Scenic Rivers System (NWSRS) from the effects of construction or development.	The Wild and Scenic Rivers Act (16 U.S.C. 1271-1287), particularly section 7(b) and (c) (16 U.S.C. 1278(b) and (c))	36 CFR Part 297

1. Is your project within proximity of a NWSRS river?

No

Yes, the project is in proximity of a Designated Wild and Scenic River or Study Wild and Scenic River.

Yes, the project is in proximity of a Nationwide Rivers Inventory (NRI) River.

Screen Summary

Compliance Determination

Based on review of the National Wild & Scenic Rivers System maintained by the U.S. Bureau of Land Management, National Park Service, US Fish and Wildlife Service, and US Forest Service, as well as the NEPAassist tool, this project is not within proximity of a NWSRS river. The project is in compliance with the Wild and Scenic Rivers Act.

Are formal compliance steps or mitigation required?

Yes

No

Housing Requirements

General requirements	Legislation	Regulations
Many Housing Programs have additional requirements beyond those listed at 50.4. Some of these relate to compliance with 50.3(i) and others relate to site nuisances and hazards		24 CFR 50.3(i) 24 CFR 35

Hazardous Substances

Requirements for evaluating additional housing requirements vary by program. Refer to the appropriate guidance for the program area (i.e, the Multifamily Accelerated Processing (MAP) guide, Chapter 7 of the Healthcare Mortgage Insurance Handbook, etc.) for specific requirements.

Lead-based paint

Was a lead-based paint inspection or survey performed by the appropriate certified lead professional?

Yes

No, because the project was previously deemed to be lead free.

No, because the project does not involve any buildings constructed prior to 1978.

No, because program guidance does not require testing for this type of project
For example: HUD's lead-based paint requirements at 24 CFR Part 35 do not apply to housing designated exclusively for the elderly or persons with disabilities, unless a child of less than 6 years of age resides or is expected to reside in such housing. In addition, the requirements do not apply to 0-bedroom dwelling units.

Was lead-based paint identified on site?

Yes

No

Based on the 1958 date of construction, there is potential that the paint at the property is lead-based. A Lead-Based Paint Inspection and Lead Paint Risk Assessment were performed at the property in June 2023. Results of the assessment indicate that no lead painted components were identified. However, a lead dust hazard was identified on the living room floor of Unit 1902. In addition, the property currently has on-file a Lead-Based Paint Operations and Maintenance (O&M) Program, prepared by Bureau Veritas and dated June 28, 2023.

Radon

Was radon testing performed following the appropriate and latest ANSI-AARST standard?

Yes

No, because program guidance does not require testing for this type of project. Note that radon testing is encouraged for all HUD projects, even where it is not required. Explain why radon testing was not completed below.

Did testing identify one or more units with radon levels above the EPA action level for mitigation?

Yes

Refer to program guidance for remediation requirements. Describe the testing procedure and findings below and any necessary mitigation measures in the Mitigation textbox at the bottom of this screen. Upload all documentation below

No

Upload below all testing documents demonstrating that radon was not found above EPA action levels for mitigation.

Short-term radon testing was performed by Bureau Veritas in May 2022, with confirmatory testing performed in September 2022. The testing was performed in accordance with ANSI/AARST Protocol for Conducting Radon and Radon Decay Product Measurements in Large Buildings (ANSI/AARST MAMF-2017 (rev. 1/21)). Based on the results of laboratory analysis, several locations were identified with radon gas concentrations above the USEPA action level of 4.0 pCi/L. An executed contract for installation of the radon mitigation systems was provided by the applicant to address this concern.

Asbestos

Was a comprehensive asbestos building survey performed pursuant to the relevant requirements of the latest ASTM standard?

✓ Yes

No, because the project does not involve any buildings constructed prior to 1978. Provide documentation of construction date(s) below.

No, because program guidance does not require testing for this type of project Explain in textbox below.

Was asbestos identified on site?

✓ Yes, friable or damaged asbestos was identified.
Refer to program guidance for remediation requirements. Describe the testing procedure and findings in the textbox below and any necessary mitigation measures in the Mitigation textbox at the bottom of this screen. Upload all documentation below.

Yes, asbestos was identified, but it was not friable or damaged
Refer to program guidance for remediation requirements. Describe the testing procedure and findings in the textbox below and any necessary mitigation measures in the Mitigation textbox at the bottom of this screen. Upload all documentation below.

No

Based on the date of construction (pre January 1, 1978), an asbestos inspection was performed in June 2023. Multiple suspect ACMs were identified during the course of the baseline survey. Samples of various suspect materials were collected based on friability and condition of the materials as observed by the Asbestos Inspector. Of the 1,506 samples analyzed, 172 materials were found to contain asbestos. In addition, the property currently has on-file an Asbestos-Containing Materials Operations and Maintenance (O&M) Plan, prepared by Bureau Veritas and dated June 20, 2023.

Additional Nuisances and Hazards

Many Housing Programs have additional requirements with respect to common nuisances and hazards. These include High Pressure Pipelines; Fall Hazards (High Voltage Transmission Lines and Support Structures); Oil or Gas Wells, Sour Gas Wells and Slush Pits; and Development planned on filled ground. There may also be additional regional or local requirements.

No additional nuisances and/or hazards such as high pressure pipelines; fall hazards; oil or gas wells; sour gas wells and slush pits; or development planned on filled ground were identified during the Phase I ESA. Therefore, this determination was based on on-site investigations and observations; review of current and historic maps and aerial photographs; interviews with site personnel; review of information maintained by applicable local and state agencies; and interviews with site personnel. All such sources are documented in the Phase I ESA report, as submitted.

Mitigation

Describe all mitigation measures that will be taken for the Housing Requirements.

The area with the lead dust hazard should be addressed using special wet cleaning of the affected area. Minimum specifications include HEPA vacuuming, wet wiping, and a final HEPA vacuuming. The USEPA requires clearance sampling following abatement activities.

Radon mitigation systems require routine maintenance and upkeep. In addition, the fans within the units need to be replaced after approximately 7 years. The units serviced by the mitigation units should be tested biennially to ensure that the systems remain effective at reducing radon concentrations below the USEPA action level. Testing of the entire property should be conducted every five years using the testing protocols described in AARST MAMF 2017, or the most recent version. In addition, per HUD Guidelines, a Radon Mitigation Operations and Maintenance (O&M) Program is required to ensure the proper maintenance of the mitigation systems that are currently in place, as well as any others that might be installed in the future.

Asbestos abatement procedures should be included in planned construction specifications and all ACM should be abated as part of the demolition/rehabilitation activities in accordance with local, state, and federal regulations. The remaining materials can be maintained in place with implementation of the Asbestos O&M Plan.

Environmental Justice

General requirements	Legislation	Regulation
Determine if the project creates adverse environmental impacts upon a low-income or minority community. If it does, engage the community in meaningful participation about mitigating the impacts or move the project.	Executive Order 12898	

HUD strongly encourages starting the Environmental Justice analysis only after all other laws and authorities, including Environmental Assessment factors if necessary, have been completed.

1. Were any adverse environmental impacts identified in any other compliance review portion of this project’s total environmental review?

Yes

No

Based on the response, the review is in compliance with this section.

Screen Summary

Compliance Determination

Nelson Park Apartments was constructed in 1958 to provide assistance in creating housing opportunities for people who were displaced by the demolition surrounding the Goodale Expressway project under Urban Renewal. These units were requested and authorized by the FHA in anticipation that a large portion of them would be available to families of color who were about to be displaced by the new expressway construction and redevelopment of Goodale. In addition, review of the EJSscreen report obtained from the USEPA indicated that the project site is currently located in an area with people of color and low-income populations greater than the state average. No adverse environmental conditions were identified that would result in a disproportionately high adverse human health impact or environmental impact on people of color or low income populations. Additionally, the redevelopment of the project site is designed to respond to resident concerns, improve residential density and accessibility, add neighborhood amenities, and facilitate a better connection to

the surrounding neighborhood. The project is in compliance with Executive Order 12898.

		Y	N	Unk	
9	Are there currently or previously any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the Property or adjacent to any structure located on the Property?		X		
10	Are there currently or previously any flooring, drains, or walls located at the Property that are stained by substances other than water or are emitting foul odors?		X		
11	If the Property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system? Has the well been designated as contaminated by any government environmental/health agency?		X		
12	Have you been informed of the past existence of hazardous substances or petroleum products with respect to the Property or any facility located on the Property?		X		
13	Have there been any environmental site assessments of the Property that indicated the presence of hazardous substances or petroleum products on, or contamination of, the Property or recommended further assessment of the Property?		X		
14	Does the Property discharge waste water on or adjacent to the Property, other than storm water, into a storm water sewer system?		X		
15	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials been dumped above grade, buried, and/or burned on the Property?		X		
16	Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs?		X		
17	Is there now or has there ever been any asbestos-containing materials (ACM), in any application, on the Property?		X		
18	Has there ever been any asbestos-containing materials testing conducted on the Property?	X			Asbestos materials identified
19	Is there an Asbestos Operations and Maintenance (O&M) program in place at the Property?	X			
20	Is there now or has there ever been any lead-based paint (LBP) applications on the Property?	X			
21	Has there ever been lead-based paint testing conducted on the Property?	X			
22	Is there a Lead Paint Operations and Maintenance (O&M) Program in place at the Property?	X			
23	Has the water at the Property ever been tested for lead?	X			
24	Has radon testing ever been conducted at the Property?	X			
25	Has any part of the Property ever contained visible mold growth?	X			In bathroom, living room and kitchen areas of multiple apartment units
26	Has there ever been any sort of Indoor Air Quality (IAQ) or mold testing conducted in the building(s)?		X		

QUESTION		RESPONSE			COMMENTS
		Y	N	Unk	
27	Is there a Mold Operations and Maintenance (O&M) program in place at the Property?		X		
28	Are there any other Operations and Maintenance (O&M) programs in place that we should be made aware of? If so, please provide details.		X		
29	Has fill dirt been brought onto the Property which originated from a contaminated site or is of an unknown origin?			X	
30	Is the Property or any portion of the Property located or involved in any environmentally sensitive areas (i.e., wetlands, coastal barrier resource areas, coastal barrier improvement act areas, flood plains, endangered species)?		X		
31	Have you been informed of the past existence of environmental violations with respect to the Property or any facility located on the Property?		X		
32	Are there any environmental liens or governmental notification relating to past or current violations of environmental laws with respect to the Property or any facility located on the Property?		X		
33	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances of petroleum products in, on or from the Property?		X		
34	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Property?		X		
35	Are you aware of any notices from any governmental entity regarding any possible violation or environmental laws or possible liability relating to hazardous substances or petroleum products?		X		
Summarize historical Property use (when was the Property developed with the current improvements, what modifications have taken place, what was the Property used for prior to its current use)		Unknown			
On the day of the site visit, provide Bureau Veritas's Field Observer access to all of the available documents listed below.					
<ul style="list-style-type: none"> ▪ Previous Environmental Site Assessment and Compliance Audit reports ▪ Site plans, ALTA surveys, etc. ▪ Asbestos, Lead Based Paint, Mold Operations and Maintenance Programs (O&Ms) ▪ Environmental permits, including registrations for aboveground and underground storage tanks and registrations for underground injection systems ▪ Material Safety Data Sheets ▪ Hazardous waste generator notices or reports ▪ Community Right-to-Know Plan, Risk Assessments, Safety plans, SPCC plans, FRP Plans, etc. ▪ Reports regarding hydrogeological conditions on the Property or adjoining properties ▪ Notices from government agencies regarding past or current violations of environmental laws ▪ Environmental liens and recorded Activity and Use Limitations ▪ Geotechnical surveys

ASTM E1527 USER QUESTIONNAIRE PHASE I ENVIRONMENTAL SITE ASSESSMENT

Bureau Veritas has been retained to conduct a Phase I Environmental Site Assessment (ESA) on your property as contracted. The Phase I ESA will involve site observations, interviews, and a review of available documentation. To ensure the success of the assessment, and in accordance with the ASTM E1527 Scope of Work, we are required to ask the following questions to the User of the report seeking to fulfill the User Requirements of the Standard. Please complete and return this questionnaire to Bureau Veritas (within two days of receipt).

Date: _____

Company name: _____

Property Name/Street Address: _____

Property City/State/Zip: _____

Name of person completing questionnaire: _____ **Phone Number:** _____

Role/Title: _____ **Fax Number:** _____

Length of association with property: _____ **E-mail address:** _____

Please check one: **User:** **User Representative:**

Signature: _____

Directions: Please answer all questions to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Additional details necessary to explain any yes or unknown responses should be provided in the "Comments" column.
 Note: *U* indicates "Unknown", *NR* indicates "No Response" and "N/A" indicates not applicable.

1	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
2	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
3	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
4	Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
5	Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

QUESTION	RESPONSE				COMMENTS
	Y	N	U	NR	
6 As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
7 Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
8 Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
8 (a) Do you know the past uses of the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
8 (b) Do you know of specific chemicals that are present or once were present at the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
8 (c) Do you know of spills or other chemical releases that have taken place at the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
8 (d) Do you know of any environmental cleanups that have taken place at the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
9 As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

If you have access to any of the following helpful documents, please indicate them below and then send them to Bureau Veritas via standard mail or e-mail/fax along with this questionnaire. Mailing address: 6021 University Blvd, Suite 200; Ellicott City, MD 21043.

Helpful Documents to be forwarded Bureau Veritas:

- Environmental site assessment reports (i.e., Phase I, Phase II, tank testing results, radon, lead paint, or asbestos testing, etc.)
- Environmental compliance audit reports; risk assessments; and recorded Activity and Use Limitations (AULs)
- Environmental permits (i.e., solid waste disposal, hazardous waste disposal, wastewater, NPDES, underground injection, etc.)
- Registrations for underground storage tanks (USTs) and aboveground storage tanks (ASTs)
- Registrations for underground injection systems
- Material safety data sheets
- Community right-to-know plan
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans, etc
- Reports regarding hydrogeological or geotechnical conditions on the property and surrounding area
- Notices/correspondence from any agency relating to past/current violations of environmental laws, or liens encumbering the property
- Hazardous waste generator notices or reports
- Other:

Subject: Fire Department Records Request
Date: Wednesday, October 11, 2023 10:41:00 AM

Dear Sir Or Madam:

BV is an engineering firm currently conducting an Environmental Site Assessment of the following property on behalf of the property owner:

Nelson Park Apartments
1994 Maryland Avenue
Columbus, Ohio 43219

As part of this process, we are submitting this request for information specific to the property. Please provide us with the following information concerning the property:

- 1) How far back are records maintained by the Fire Department?**
- 2) Are there any records of underground or aboveground storage tanks?**
- 3) Are there any records of spills or releases of petroleum products and/or hazardous materials?**

Please provide follow up documentation for any Yes responses to these questions. Responses may be emailed to rfi@bureauveritas.com or faxed to 410.785.6220. If you need additional information to complete this request or the cost to complete this request will exceed \$25, please contact me. Thank you for your prompt attention to this matter.

Location Latitude: 39.983301
Location Longitude: -82.958927

Violation/Evaluation Summary

Note: NO RECORDS: As of Apr 2023, there are no Compliance Monitoring and Enforcement (violation) records associated with this facility (EPA ID).

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: No
Transfer Facility: No
Onsite Burner Exemption: No
Furnace Exemption: No
Underground Injection Activity: No
Commercial TSD: No
Used Oil Transporter: No
Used Oil Transfer Facility: No
Used Oil Processor: No
Used Oil Refiner: No
Used Oil Burner: No
Used Oil Market Burner: No
Used Oil Spec Marketer: No

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 20210506
Handler Name: ROBINSON BODY SHOP
Source Type: Implementer
Federal Waste Generator Code: N
Generator Code Description: Not a Generator, Verified

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19891020
Handler Name: ROBINSON BODY SHOP
Source Type: Notification
Federal Waste Generator Code: 2
Generator Code Description: Small Quantity Generator

Waste Code Details

Hazardous Waste Code: D000
Waste Code Description: DESCRIPTION

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List:

[NPL](#)

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 23, 2023

National Priority List - Proposed:

[PROPOSED NPL](#)

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 23, 2023

Deleted NPL:

[DELETED NPL](#)

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 23, 2023

SEMS List 8R Active Site Inventory:

[SEMS](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Jan 25, 2023

Inventory of Open Dumps, June 1985:

[ODI](#)

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites:

[SEMS ARCHIVE](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Jan 25, 2023

Comprehensive Environmental Response, Compensation and Liability Information System -

[CERCLIS](#)

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:

[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:

[RCRA CORRACTS](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Apr 24, 2023

RCRA non-CORRACTS TSD Facilities:

[RCRA TSD](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by RCRA.

Government Publication Date: Apr 24, 2023

RCRA Generator List:

[RCRA LQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Apr 24, 2023

RCRA Small Quantity Generators List:

[RCRA SQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Apr 24, 2023

RCRA Very Small Quantity Generators List:

[RCRA VSQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Apr 24, 2023

RCRA Non-Generators:

[RCRA NON GEN](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Apr 24, 2023

RCRA Sites with Controls:

[RCRA CONTROLS](#)

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Apr 24, 2023

Federal Engineering Controls-ECs:

[FED ENG](#)

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Feb 23, 2023

Federal Institutional Controls- ICs:

[FED INST](#)

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Feb 23, 2023

Land Use Control Information System:

LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites:

NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Mar 23, 2023

Emergency Response Notification System:

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System:

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System:

ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Jan 16, 2023

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:

FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 13, 2022

FEMA Underground Storage Tank Listing:

FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan:

FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

Government Publication Date: Aug 8, 2022

Delisted Facility Response Plans:

DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Aug 8, 2022

Historical Gas Stations:

[HIST GAS STATIONS](#)

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries:

[REFN](#)

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Aug 30, 2022

Petroleum Product and Crude Oil Rail Terminals:

[BULK TERMINAL](#)

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jun 29, 2022

LIEN on Property:

[SEMS LIEN](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Jan 25, 2023

Superfund Decision Documents:

[SUPERFUND ROD](#)

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Mar 23, 2023

Formerly Utilized Sites Remedial Action Program:

[DOE FUSRAP](#)

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

State

Division of Environmental Response & Revitalization Database:

[DERR](#)

The Ohio Environmental Protection Agency's (Ohio EPA) Division of Environmental Response and Revitalization (DERR) database is an index of sites maintained by their district offices. The database contains basic site information only and is NOT a record of contaminated sites in Ohio. Not all sites are contaminated, and a site's absence does not imply that it is uncontaminated. The database is also not a list of Brownfield sites; some sites do not meet the federal or state definitions of Brownfields and many properties in Ohio that may qualify as Brownfields are not included.

Government Publication Date: Apr 19, 2023

Delisted Division of Environmental Response & Revitalization:

[DELISTED DERR](#)

List of sites which were once included but have since been removed from the Ohio Environmental Protection Agency (Ohio EPA) Division of Environmental Response & Revitalization (DERR) database; an index of sites for which district offices maintain files. DERR is NOT a record of contaminated sites or sites suspected of contamination; not all sites in the database are contaminated, and a site's absence from the database does not imply that it is uncontaminated.

Government Publication Date: Apr 19, 2023

Ohio Licensed Solid Waste Facilities, Landfills and other Waste Facilities:

[SWF/LF](#)

List of landfill and solid waste facilities of various types as maintained by the Division of Materials and Waste Management of the Ohio Environmental Protection Agency (Ohio EPA), including: municipal solid waste facilities, municipal solid waste transfer stations, construction and demolition landfills, compost class 1,2,3 and 4 facilities, industrial and residual waste landfills, and scrap tire disposal and recycling facilities. Includes active and inactive facilities.

Government Publication Date: Aug 11, 2021

Ohio Old Solid Waste Landfill (OLDSWLF):

HIST LF

A list of about 1200 old abandoned dumps or landfills. This database was developed from Ohio EPA staff notebooks and other information dating from the mid-1970's, including old Division of Solid and Hazardous Waste Management and DERR files, the Eckhardt Report and the 1976 Groundwater Pollution Inventory-Summary of Land Disposal.

Government Publication Date: Historic

Ohio Leaking Underground Storage Tanks (LUST):

LUST

List of facilities with active and inactive environmental files, and active and inactive tank facilities with releases, made available by the Ohio Department of Commerce, Division of the State Fire Marshall under the Bureau of Underground Storage Tank Regulations (BUSTR). BUSTR's mission is to effectively regulate the safe operation of underground storage tanks and to ensure appropriate investigation and cleanup of releases from underground storage tanks for the purpose of protecting human health and the environment for the citizens of Ohio.

Government Publication Date: Jan 10, 2023

Delisted Petroleum Release List:

DELISTED LST

List of petroleum release incidents sites that have been removed from either: the list of facilities with active release from regulated tanks, or the Non-Regulated Leaking Underground Storage Tanks (LUST) list, both made available by the Bureau of Underground Storage Tank Regulations in the Ohio Department of Commerce.

Government Publication Date: Jan 10, 2023

Regulated and Non-Regulated Leaking Underground Storage Tanks (LUST):

LST

List of sites where there has been a suspected or confirmed release of petroleum from a regulated or non-regulated underground storage tank (UST). This list has been made available by the Bureau of Underground Storage Tank Regulations in the Ohio Department of Commerce.

Government Publication Date: Jan 9, 2023

Ohio Registered Underground Storage Tanks (UST):

UST

List of Active and Inactive Registered Underground Storage Tanks regulated by the Ohio Department of Commerce, Division of the State Fire Marshall under the Bureau of Underground Storage Tank Regulations (BUSTR). BUSTR's mission is to effectively regulate the safe operation of underground storage tanks and to ensure appropriate investigation and cleanup of releases from underground storage tanks for the purpose of protecting human health and the environment for the citizens of Ohio.

Government Publication Date: Jan 10, 2023

Aboveground and Unregulated Tanks:

TANKS

A list of tanks in Ohio known to the Division of the State Fire Marshal - Code Enforcement Bureau.

Note: Aboveground Storage Tanks in Ohio are regulated by local fire departments. This list of tanks known to the State Fire Marshall should not be considered a comprehensive list of aboveground or unregulated tanks in Ohio.

Government Publication Date: Aug 22, 2022

Aboveground and Unregulated Tanks (since 2022):

TANKS 2

A list of tanks in Ohio known to the Ohio Division of the State Fire Marshal - Code Enforcement Bureau. Note this listing only includes data posted after July 2022.

Note: Aboveground Storage Tanks in Ohio are regulated by local fire departments. This list of tanks known to the State Fire Marshall should not be considered a comprehensive list of aboveground or unregulated tanks in Ohio.

Government Publication Date: Mar 21, 2023

Delisted Storage Tanks:

DTNK

A list of sites which once appeared on and have since been removed from either: the list of active or inactive tank sites made available by the State Fire Marshall Bureau of Underground Storage Tanks (BUSTR); or the Ohio Tank Tracking and Environmental Regulations search (BUSTR Public Inquiry page).

Government Publication Date: Jan 10, 2023

Engineering Controls:

ENG

List of facilities which have implemented engineering controls under Ohio's Voluntary Action Program (VAP). This list is maintained by the Ohio Environmental Protection Agency (Ohio EPA).

Institutional Controls:

INST

This list of sites which have implemented an institutional control is maintained by the Ohio Environmental Protection Agency's (Ohio EPA) Division of Environmental Response and Revitalization (DERR). The site listing is sourced from the DERR List of Projects with Institutional Controls which includes applicable projects under the Voluntary Action Program (VAP) and the Remedial Response Program (RR).

Government Publication Date: Apr 19, 2023

Voluntary Action Program Sites:

VCP

This list of Voluntary Action Program sites is provided by the Ohio Environmental Protection Agency's (Ohio EPA) Division of Environmental Response and Revitalization (DERR). The VAP Program gives individuals a way to investigate possible environmental contamination, clean it up if necessary and receive a promise from the State of Ohio that no more cleanup is needed. When cleanup requirements are met, the director of Ohio EPA issues a covenant not to sue. This covenant protects the property owner or operator and future owners from being legally responsible to the State of Ohio for further investigation and cleanup. This protection applies only when the property is used and maintained in the same manner as when the covenant was issued.

Government Publication Date: Apr 19, 2023

Covenants Not to Sue Sites:

VAP CNS

List of sites where a covenant not to sue (CNS) has been issued. Ohio's Voluntary Action Program (VAP) sets standards for contaminated site assessment and remediation and reviews the activities conducted by certified professionals based on those standards to issue covenants not to sue (CNS).

Government Publication Date: Sep 1, 2021

Brownfield Inventory:

BROWNFIELDS

Statewide inventory of brownfield properties maintained by the Ohio Environmental Protection Agency (Ohio EPA). Ohio EPA describes a brownfield as a previously-developed site with potential contamination from industrial or commercial activity that was not being redeveloped due to fear of litigation. Inclusion on this list is voluntary. Most of the properties contained in the Ohio Brownfield Inventory are properties that have received funding through either the Clean Ohio Assistance Fund (COAF) or Clean Ohio Revitalization Fund (CORF). There are also some properties listed that have received funding through U.S. EPA's Brownfield Grants.

Government Publication Date: May 8, 2023

Tribal

Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands:

INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 5, which includes Ohio, is made available by the United States Environmental Protection Agency (EPA). There are no federally recognized Tribes in Ohio, according to the U.S. Department of Interior, Bureau of Indian Affairs.

Government Publication Date: Oct 16, 2017

Underground Storage Tanks (USTs) on Indian Lands:

INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 5, which includes Ohio, is made available by the United States Environmental Protection Agency (EPA). There are no federally recognized Tribes in Ohio, according to the U.S. Department of Interior, Bureau of Indian Affairs.

Government Publication Date: Oct 16, 2017

Delisted Tribal Leaking Storage Tanks:

DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 26, 2023

Delisted Tribal Underground Storage Tanks:

DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 26, 2023

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index:

FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Aug 18, 2022

Toxics Release Inventory (TRI) Program:

TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Oct 19, 2022

PFOA/PFOS Contaminated Sites:

PFAS NPL

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Mar 28, 2023

Federal Agency Locations with Known or Suspected PFAS Detections:

PFAS FED SITES

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. The dates this data was extracted for the PFAS Analytic Tools range from March 2022 to April 2023. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: Apr 24, 2023

SSEHRI PFAS Contamination Sites:

PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map, credited to the Northeastern University's PFAS Project Lab, Silent Spring Institute, and the PFAS-REACH team. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information:

<https://pfasproject.com/pfas-sites-and-community-resources/>

Government Publication Date: Oct 9, 2022

National Response Center PFAS Spills:

ERNS PFAS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Limitations: The data from the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

PFAS NPDES Discharge Monitoring:

[PFAS NPDES](#)

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Feb 19, 2023

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory:

[PFAS TRI](#)

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Oct 19, 2022

Perfluorinated Alkyl Substances (PFAS) Water Quality:

[PFAS WATER](#)

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

PFAS TSCA Manufacture and Import Facilities:

[PFAS TSCA](#)

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest :

[PFAS E-MANIFEST](#)

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Apr 9, 2023

PFAS Industry Sectors:

[PFAS IND](#)

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Apr 16, 2023

Hazardous Materials Information Reporting System:

HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs:

NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Feb 8, 2023

Toxic Substances Control Act:

TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA:

HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing:

FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:

PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Jan 25, 2023

State Coalition for Remediation of Drycleaners Listing:

SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):

ICIS

The U.S. Environmental Protection Agency's Enforcement and Compliance History Online system incorporates data from the Integrated Compliance Information System - National Pollutant Discharge Elimination System (ICIS-NPDES). ICIS-NPDES is an information management system maintained by the Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. This data includes permit, inspection, violation and enforcement action information for applicable ICIS records.

Government Publication Date: Oct 15, 2022

Drycleaner Facilities:

[FED DRYCLEANERS](#)

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Dec 11, 2022

Delisted Drycleaner Facilities:

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Dec 11, 2022

Formerly Used Defense Sites:

[FUDS](#)

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

Government Publication Date: Jul 12, 2022

FUDS Munitions Response Sites:

[FUDS MRS](#)

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: Jul 12, 2022

Former Military Nike Missile Sites:

[FORMER NIKE](#)

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents:

[PIPELINE INCIDENT](#)

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Mar 31, 2021

Material Licensing Tracking System (MLTS):

[MLTS](#)

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites:

[HIST MLTS](#)

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

[MINES](#)

The Master Index File (MIF) is provided by the United State Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Nov 7, 2022

Surface Mining Control and Reclamation Act Sites:

[SMCRA](#)

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Aug 18, 2022

Mineral Resource Data System:

[MRDS](#)

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites:

[LM SITES](#)

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Title II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 1, 2022

Alternative Fueling Stations:

[ALT FUELS](#)

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Mar 23, 2023

Superfunds Consent Decrees:

[CONSENT DECREES](#)

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Apr 19, 2023

Air Facility System:

[AFS](#)

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments:

SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 30, 2022

Polychlorinated Biphenyl (PCB) Transformers:

PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers:

PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 3, 2022

State

Ohio Emergency Response (ER) Spills data:

SPILLS

Incidents reported to the Emergency Response Unit of the Ohio Environmental Protection Agency (Ohio EPA); includes clandestine drug lab sites with environmental impact.

Government Publication Date: Aug 25, 2020

Ohio Historic Towngas Database (TOWNGAS):

TOWNGAS

A list of 82 sites of coal gas generators in Ohio. These plants produced gas for street lights in the communities in which they were located. The production of one million cubic feet of gas also produced about 800 gallons of liquid coal tar, which is a carcinogen. TOWNGAS was developed from a database from Radian Corporation along with information from the Ohio Historical Society and various public libraries.

Government Publication Date: Historic

Dry Cleaning Facilities:

DRYCLEANERS

This list of facilities, which have obtained permits to install or operate dry cleaning operations, is maintained by the Ohio Environmental Protection Agency's (Ohio EPA) Division of Air Pollution Control (DAPC). This data is sourced from the Ohio EPA's applicable electronic copies of issued permits search tool and FOIA file.

Government Publication Date: Mar 28, 2023

Delisted Drycleaner Facilities:

DELISTED DRYCLEANERS

List of drycleaner facilities/sites which have been delisted from Ohio Environmental Protection Agency (Ohio EPA).

Government Publication Date: Mar 28, 2023

Urban Setting Designation Sites:

USD

List of sites granted Urban Setting Designation (USD) by the Ohio Environmental Protection Agency (Ohio EPA). USDs are granted to brownfield and voluntary cleanup properties located in highly urbanized areas where ground water containing chemicals from prior industrial or commercial activities poses no perceptible risk to the community because the ground water is not being used and will not be used for drinking water purposes in the foreseeable future.

Government Publication Date: May 18, 2023

Cessation of Regulated Operations (CRO) Program:

CRO

The goal of the Cessation of Regulated Operations (CRO) program run by the Ohio Environmental Protection Agency (Ohio EPA) is to prevent threats to human health and the environment created when business owners and operators irresponsibly abandon businesses where chemicals were produced, used, stored or handled.

Government Publication Date: Apr 26, 2023

Ohio Old Sludge Dumping Database (SIABASE):

SIAB

This database of about 2800 sites represent pits, ponds and lagoons where various types of sludge were dumped over many years. The object of this data collection was to determine if harm was done to drinking water supplies below each dump site. The data were collected during the 1970s and published by the Ohio Environmental Protection Agency in 1980.

Government Publication Date: Historic

Per- and Polyfluoroalkyl Substances (PFAS):

PFAS

A list of known PFAS contaminated sites. This list is made available by the Ohio Environmental Protection Agency (Ohio EPA).

Government Publication Date: Oct 6, 2022

Underground Injection Control Wells:

UIC

This database includes Class I, IV and V Underground Injection Control (UIC) Wells and is provided by Ohio Environmental Protection Agency (OH EPA). The OH EPA's UIC Program is responsible for the regulation of these injection wells, and for assuring that their operation does not contaminate underground sources of drinking water. This Program was established under the authority of Ohio Revised Code sections 6111.043 and 6111.044, and regulates Class I, IV, and V wells by implementing Chapter 3745-34 of the Ohio Administrative Code. Detailed well class descriptions are as follows: Class I wells inject hazardous and non-hazardous wastes into deep, isolated rock formations that are thousands of feet below the lowermost underground source of drinking water. Class IV wells are shallow wells used to inject hazardous or radioactive wastes into or above a geologic formation that contains an underground source of drinking water. Class V wells are used to inject non-hazardous fluids underground either into or above an underground source of drinking water.

Government Publication Date: Feb 8, 2023

PFAS Testing of Ohio Public Water Systems:

PFAS PWS

A list of public water supply systems that have been tested for PFAS made available by the Ohio Environmental Protection Agency (EPA).

Government Publication Date: Oct 6, 2022

Permit by Rule Air Facilities:

AIR PERMITS

A permit-by-rule is a specific permit provision in the Ohio Administrative Code that applies to certain types of low-emitting air pollution sources. This list of Permit by Rule facilities is provided by the Ohio Environmental Protection Agency.

Government Publication Date: Jul 30, 2020

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

APPENDIX G: VAPOR ENCROACHMENT SCREENING REPORT

VAPOR
SCREENING

Project Property: *Nelson Park Apartments
1994 Maryland Avenue
Columbus OH 43219*

Project No: *156846.22R000-002.129*

Notice: IMPORTANT INFORMATION:

Service: Client has used a service offered by ERIS Information Inc. ("**ERIS**") to generate this report based upon certain search parameters set by Client, or in the case of ERIS's Vapor Encroachment Screening Tool and Checklist, certain search parameters set by ERIS and modified by Client (the "**Service**"). This report contains the results of a search conducted by ERIS of environmental records maintained by third parties. ERIS does not maintain, and has no responsibility for the accuracy or completeness of, such records.

Agreement: Client's use of the Service and any report generated thereby is subject to the Master Services Agreement previously entered into by Client and ERIS, or the terms and conditions accepted by Client in electronically submitting a request for the Service, (the "**Agreement**") and no provision of this Notice shall modify the Agreement. To the extent there is a conflict between any provision of this Notice and any provision of the Agreement, the latter shall control.

Liability Limitation: ERIS's liability for the Service and this report shall be limited to the amount paid by Client for this report and as otherwise set forth in the Agreement. Although in preparing this report ERIS has endeavored to present information that is accurate, ERIS will not have any liability for any errors, omissions or inaccuracies in such information, even if ERIS sets, or Client modifies, the parameters used to conduct the search.

Reliance on Report: This report (1) applies only to the address and the date specified on the cover page of this report and (2) is not a substitute for a Phase I Environmental Site Assessment, a Vapor Encroachment Assessment or any other similar assessment. It is solely intended to be used as a database search of current environmental records maintained by third parties, and Client should not rely on this report for any purpose for which it is not intended. Client may, in Client's discretion, modify search parameters within some of the tools of the Service that may affect the results for which ERIS is not responsible.

License for Use of Report: Client is licensed to use this report solely for its intended purpose as set forth in this Notice and the Agreement. No page of this report may be used by Client without including this report's cover page, this Notice and the project property identifier.

Client Liability: Use of the Service or this report in a manner contrary to this Notice or the Agreement will be a breach of contract and an infringement of ERIS's copyright and other intellectual property rights, for which ERIS will be entitled to damages and other remedies. In addition, upon any such breach or infringement, ERIS may terminate the Agreement, Client's account with ERIS, Client's license to use any reports previously generated for Client pursuant to the Service, and Client's future use of the Service.

Warranty Disclaimer: EXCEPT AS EXPRESSLY SET FORTH IN THE AGREEMENT, ERIS MAKES NO WARRANTY OR REPRESENTATION REGARDING THE SERVICE, THIS REPORT OR THE RESULTS OF ANY SEARCH CONDUCTED BY CLIENT USING THE SERVICE.

Ownership: Client may not use any of ERIS's trademarks or attribute any work product to ERIS other than as expressly set forth in this Notice or the Agreement. The Service and this reports are owned by ERIS (or its licensors) and protected by copyright and other intellectual property rights. No portion of this report may be, in whole or in part, modified, reproduced or transferred to a third party by Client, without the prior written consent of ERIS.

Executive Summary

This Report was produced through the ERIS Vapor Screening Tool. The ERIS Vapor Screening Tool and this report output are designed to help those in conducting a Vapor Encroachment Screening on a Property Involved in Real Estate Transactions under the ASTM Standard Designation E2600 – 15.

The following table lists the data sources searched and any hits in the Area of Concern (AOC) that have been included in the report. The search distances listed are based on search distances used in the Database Report and the search results are grouped based on the minimum default search distances for Chemicals of Concern (COCs) and Petroleum Hydrocarbon Chemicals of Concern (PHCOCs) as outlined in E2600-15. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment.

Vapor Encroachment Details

Impact on Target Property: VEC does not exist
 Conditions: N/A
 Groundwater Flow Gradient: N/A
 Flow is based on the following:
 Preferential Pathway:
 Geological Attributes - Hydraulic Barrier:
 Geological Attributes - Physical Barrier:
 Geological Attributes - Soil Geology:
 Comments:

The ERNS database is a listing of oil and hazardous substances spill reports made available by the US Coast Guard National Response Center. According to the database, a natural gas leak at a private residence was reported in 2010. The caller indicated they detected the odor intermittently. At the time of BV\U0027s visit, no natural gas odor was detected at the subject property. The information provided is not indicative of a VEC.

<u>3</u>		N NELSON RD / MARYLAND AVE NELSON & MARYLAND AVE Nelson/maryland	4.32 / 14.17	-3.0

ASTM Category: State and Tribal Spill sites list

Vapor Encroachment Details

Impact on Target Property: VEC does not exist
Conditions: Petroleum Hydrocarbon Chemicals of Concern (PCOC)
Groundwater Flow Gradient: Down-Gradient
Flow is based on the following:
Preferential Pathway:
Geological Attributes - Hydraulic Barrier:
Geological Attributes - Physical Barrier:
Geological Attributes - Soil Geology:
Comments:

A sheen was observed on surface water from an unknown source. Based on direction of groundwater flow, apparent minor nature of the spill, and the lack of reported groundwater contamination, this is not considered to be a VEC.

Geological Attributes - Physical Barrier:
Geological Attributes - Soil Geology:
Comments:

Information from the UST database indicates that a 10,000-gallon diesel UST was removed in 1994. Information in the LUST database indicates that a release associated with a UST closure was reported at this facility, but no date of release was reported. A responsible party, Copco Papers, was identified with the release, which was also designated with an inactive status and assigned a No Further Action (NFA) status by the Ohio Bureau of Underground Storage Tank Regulations (BUSTR). BUSTR assigns a NFA status only when residual contamination, if any, has been investigated and/or remediated in accordance with applicable environmental requirements at the time of closure. Closure and NFA status verification documentation was obtained from BUSTR. Based on current status and removal of the source, this is not considered to be a VEC.

Vapor Encroachment Details

Impact on Target Property: VEC does not exist
 Conditions: Petroleum Hydrocarbon Chemicals of Concern (PCOC)
 Groundwater Flow Gradient: Cross-Gradient
 Flow is based on the following:
 Preferential Pathway:
 Geological Attributes - Hydraulic Barrier:
 Geological Attributes - Physical Barrier:
 Geological Attributes - Soil Geology:
 Comments:

A used oil UST was removed in 1993. The case was closed in 2011. Closure and NFA status verification documentation was obtained from BUSTR. Based on current status, removal of the source, distance, and length of time since closure, this is not considered to be a VEC.

Water for Living

Drinking Water
Consumer Confidence Report (CCR)
City of Columbus, Ohio

HOW TO CONTACT US

For additional information or questions about Columbus water quality please call the Water Quality Assurance Lab at 614-645-7691, or visit our website at columbus.gov/drinkingwater/.

For questions involving billing, accounts, service calls, bill payments, and additional CCR copies please contact Customer Service at: 614-645-8276.

For questions involving water emergencies, waterline breaks, hydrant damage or leaks, please contact Distribution Maintenance at: 614-645-7788.

The Sewer and Water Advisory Board meetings are open to the public. Call 614-645-6141 for a schedule of meeting times and dates.

Call 311 for city services or 614-645-3111, or visit the web at columbus.gov/311/.

THE CITY OF
COLUMBUS^{*}

ANDREW J. GINTHER, MAYOR

DEPARTMENT OF
PUBLIC UTILITIES

Division of Water
910 Dublin Road
Columbus, OH 43215

columbus.gov/utilities/

The City of Columbus has a current, unconditioned license to operate our public water system.

YOUR 2022 WATER QUALITY REPORT

The goal of the Division of Water is to ensure that any contaminants in your drinking water are restricted below a level at which there is no known health risk. This report shows the types and amounts of key elements in your water supply, their likely sources and the maximum contaminant level (MCL) that the EPA considers safe. The water delivered to your home meets ALL of the requirements of the Safe Drinking Water Act (SDWA). We use a complex multi-barrier treatment process to assure safe drinking water is delivered to our customers. If for any reason the standards are not met, the public will be notified.

Please share this information with other people who drink this water, especially those who may not have received it directly (for example, people in apartments, nursing homes, schools and businesses). You can do so by posting this report in a public place or distributing copies by hand or mail. You can request additional copies by calling customer service at 614-645-8276, emailing WaterQuality@columbus.gov, or online at columbus.gov/Water-CCR/.

WATER QUALITY ASSURANCE

The City of Columbus' Water Quality Assurance Laboratory (WQAL) is a large modern water lab with a long history of distinguished public service starting under the noted water quality chemist Charles Hoover. The lab continues to maintain that tradition of excellence and technical innovation in the ongoing use of state-of-the-art equipment for water analysis, while continuing to research the latest advancements in water treatment techniques.

The WQAL performs water quality monitoring and treatment research to ensure that Columbus' drinking water meets or is better than all federally mandated Safe Drinking Water Act (SDWA) standards. The WQAL also provides water quality information to the water plants and addresses customer complaints and inquiries regarding water quality. In 2022, the WQAL's EPA licensed and certified laboratory staff completed over 70,000 analyses relating to 33 different organic, inorganic, and microbiological water quality parameters.

To maintain compliance with current SDWA regulations, WQAL activities in 2022 were again directed at the National Primary Drinking Regulations, the Interim Enhanced Surface Water Treatment Rule, the Lead and Copper Rule, the Unregulated Contaminant Monitoring Rule (UCMR), Stage 2 of the Disinfectant/Disinfection Byproducts Rule (D/DBP), and the Long Term 2 Enhanced Surface Water Treatment Rule (LT2ESWTR). Additionally, the lab has been closely involved in planning the improvement of watershed and water distribution system surveillance and detection measures for security concerns and to maintain heightened security protocols.

As with the WQAL staff, the State of Ohio licenses and certifies the water plant operators who are charged with running and maintaining each of the three water plants. These operators also perform the critical task of treatment and process monitoring to insure that the water leaving the plant is of the highest quality. In order to stay current in the ever-changing technical field of water purification, these operators spend many hours of continuing education in the classroom every year.

These operators, the Water Quality Assurance Laboratory staff, and all of the Division of Water employees are dedicated to providing WATER, a life-sustaining resource, for the well-being and economic vitality of the community. This is our mission.

30% Post Consumer Waste

EPA's National Primary Drinking Water Regulation for Consumer Confidence Reports requires that we produce and deliver this report to all of our customers annually.

SOURCE WATER ASSESSMENT INFORMATION

A high-quality source water supply allows the Division of Water to provide consumers with quality water at a reasonable cost. Protecting our raw water sources requires investments to secure the needs of a growing population, now and in the future. As part of its ongoing efforts to maintain regulatory compliance and monitor our water supply, the Division of Water has completed two Source Water Assessment Plans – one for groundwater and one for surface water. Both plans are endorsed by the Ohio Environmental Protection Agency (OEPA) as an effective source water protection strategy. Below is a synopsis of the results.

The City of Columbus water system uses surface water from the Scioto River and Big Walnut Creek, as well as ground water pumped from sand and gravel deposits of the Scioto River Valley. All three sources of water have a relatively high susceptibility to contamination from spills or releases of chemicals. The ground water pumped at the Parsons Avenue plant is susceptible (compared to other ground water systems) because there is no significant clay overlying and protecting the aquifer deposits. The Scioto River and Big Walnut Creek are even more susceptible because they are more accessible and less protected from spills.

The drinking water source protection areas for the City of Columbus' three water sources contain numerous potential contaminant sources, especially the protection area for the Dublin Road Water Plant (extending along the Scioto River). These include industrial activities, storm water runoff from developing areas, and a heavily traveled transportation network running alongside and over the water bodies. Run-off from agricultural fields is a concern in both the Scioto River and Big Walnut Creek watersheds.

The City of Columbus treats the water to meet drinking water quality standards, but no single treatment protocol can address all potential contaminants. The City has been proactive in pursuing measures to further protect its source waters. These include land stewardship programs and incentive-driven programs to reduce erosion and run-off of pesticides and fertilizers into the Scioto River and Big Walnut Creek and their reservoirs. A summary of Columbus' Drinking Water Source Assessment Report can be viewed by calling the Watershed section at 614-645-1721. Visit columbus.gov/watershed/ for more details about watershed management and the land stewardship program.

Less than 1% of the world's fresh water supplies are available for human consumption.

THE WATER TREATMENT PROCESS

The City of Columbus, Division of Water uses a complex multi-barrier approach utilizing state of the art equipment and the latest treatment technologies.

Water flows (1) to the treatment plant from the reservoir or stream through rotating screens (2) to remove large debris. It is then pumped into the plant where alum is added (3) to cause coagulation. After rapid mixing, the water remains in the settling basin (4) while sedimentation of floc occurs (2-4 hours). The water treatment residuals (settled floc) are pumped from the bottom of the pools and stored in holding lagoons to dry.

The softening process (5) involves the addition of sodium carbonate (soda ash) or caustic soda and hydrated lime to remove calcium and magnesium ions that are responsible for water hardness. This process takes an additional 2-4 hours. For each pound of chemical used in the treatment process, two pounds are removed.

After an additional sedimentation process, carbon dioxide is added (6) to lower the pH level to approximately 7.8. Ozone is then added to the water to reduce dissolved organic matter (7). Water then flows through large biologically active filters made up of granular activated carbon (8) to remove any remaining particles and further reduce dissolved organic matter. After the biologically active filters, the water flows through UV contactors where UV light is used to disinfect the water (9).

Addition of chlorine to disinfect the water, fluoride as required to protect teeth, and a corrosion inhibitor take place at the end of the process (10) before water enters large underground clearwells (11) to be held until needed by the community (12).

Please note: When ground water is used (as in the case of the Parsons Avenue Water Plant), screening (2), initial sedimentation (3, 4), ozone (7), and UV disinfection (9) are not needed.

WHAT'S NOT IN YOUR WATER

Reports in the media often raise concerns about the health risks associated with the presence of certain minerals, chemicals, or other contaminants in your food or water. The Columbus Division of Water performs tens of thousands of tests each year to ensure drinking water quality. Many substances for which the division tests never appear in this report because they are not found in the drinking water. For example, there are 51 volatile organic chemicals as well as arsenic, perchlorate, asbestos, MTBE, radium 228, Legionella, microcystins, mercury, 1,2,3-trichloropropane (TCP) and ammonia (just to name a few) that are NOT found in your drinking water.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include: microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, USEPA prescribes regulations which limit the amount of certain contaminants in drinking water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

LEAD IN THE HOME

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Columbus is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for thirty seconds to three (3) minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested.

A list of laboratories certified in the State of Ohio to test for lead may be found at epa.ohio.gov/divisions-and-offices/drinking-and-ground-waters/public-water-systems/monitoring-and-reporting or by calling 614-644-2752. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 1-800-426-4791 or at epa.gov/safewater/lead.

The lead concentration in the drinking water leaving our water plants is below the level of detection. Most homes in the Columbus area do not have lead service lines and have little to no detectable levels of lead in their tap water.

You can also call 614-645-8276 for your free copy of "Reducing Exposure to Lead in Water." This information can also be found online at columbus.gov/LeadinWater/. Our lead program is being used to meet a portion of the notification requirements of OAC Rule 3745-83-02.

PROTECTING OUR WATER FROM BACKFLOW

Homes with underground irrigation systems and most non-residential buildings are required by the Division of Water to have a backflow prevention device. These backflow devices protect the public water system from any potentially contaminated water flowing back into the public system from a customers' plumbing. Some examples requiring backflow systems include: swimming pools, restaurants, medical facilities, laboratories, car washes, automotive shops, industrial sites and property with a well or pond.

A cross-connection is a physical connection between a possible source of contamination and the drinking water system piping. If the pressure of the source of contamination is greater than the water system pressure, contaminated water may backflow into the drinking water system. Pressure drops in the public water system caused by water line breaks, pump failures, and fire-fighting can also cause a backflow situation. If our rules and regulations require a backflow preventer, it must be tested annually by a tester you hire who is approved by our office. Additional information is on our website at columbus.gov/backflow/.

HEALTH CONCERNS

Columbus' water is regularly tested for organisms that could be harmful to people – including *Cryptosporidium*. Crypto was detected 4 out of 12 times in the Scioto River and 5 out of 9 times in Big Walnut Creek. Crypto was not detected in either the DRWP tap water or the HCWP tap water. PAWP source water is groundwater and is not impacted by surface water contaminants like Crypto.

Cryptosporidium is a microbial pathogen found in surface water throughout the U.S. Although filtration removes *Cryptosporidium*, the most commonly used filtration methods cannot guarantee 100% removal. Monitoring of source water indicates the presence of these organisms. Current test methods do not enable us to determine if the organisms are dead or if they are capable of causing disease.

Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can overcome the disease. However, immunocompromised people are at greater risk of developing life-threatening illness. We encourage immunocompromised individuals to consult their doctor regarding appropriate precautions to take to avoid infection. *Cryptosporidium* must be ingested to cause disease and it may be spread through means other than drinking water.

Columbus has a multi-barrier approach to disinfection utilizing both chemical and physical disinfection treatment. Chlorine is used as the primary and secondary disinfectant to kill disease-causing organisms, which includes viruses and Giardia. Ultraviolet (UV) light disinfection was recently added for additional disinfection at both DRWP and HCWP. UV disinfection is effective at inactivating *Cryptosporidium*.

NEWBORNS AND NITRATE

Nitrate in drinking water at levels above 10 ppm is a health risk to infants less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, you should ask for advice from your health care provider.

Seasonally, the Scioto River can experience elevated levels of nitrate due to agricultural runoff. To reduce the health risk to infants the City of Columbus added a treatment process, called anion exchange, to the Dublin Road Water Plant to remove nitrate. Anion exchange works like a water softener and pulls nitrate from the water as it flows through a bed of resin beads. Extensive water quality testing in the watershed upstream of the water plant by the Water Quality Assurance Laboratory helps to determine when we need to turn on the anion exchange system. Then additional water quality testing of the finished drinking water confirms that the nitrate level has been reduced below 10 ppm and is safe for infants.

Additional information about nitrates can be found online at columbus.gov/Nitrate/.

TOTAL ORGANIC CARBON

The value reported under "Level Found" for Total Organic Carbon (TOC) is the lowest running annual average ratio between the percentage of TOC actually removed to the percentage of TOC required to be removed. A value of greater than one indicates that the water system is in compliance with TOC removal requirements. A value of less than one indicates a violation of the TOC removal requirements. The value reported under "Range" for TOC is the lowest monthly ratio to the highest monthly ratio.

TURBIDITY

Utilities that treat surface water and/or filter the water are required to monitor for turbidity, which is a measure of the cloudiness of water and is an indication of the effectiveness of our filtration system. The turbidity limit set by the EPA is 0.3 NTU in 95% of the samples analyzed each month, shall not exceed 1 NTU at any time. The highest recorded turbidity for HCWP was 0.50 NTU and the lowest monthly percentage of samples meeting the standard was 100%. The highest recorded turbidity for DRWP was 0.18 NTU and the lowest monthly percentage of samples meeting the standard was 100%.

PFAS

Per- and Polyfluoroalkyl Substances (PFAS) are a group of man-made chemicals applied to many industrial, commercial and consumer products to make them waterproof, stain resistant, or nonstick. They are used in products like cosmetics, fast food packaging, and a type of firefighting foam called aqueous film forming foam (AFFF), which are used mainly on large spills of flammable liquids, such as jet fuel. PFAS are classified as contaminants of emerging concern, meaning that research into the harm they may cause to human health is still ongoing.

Although it is not required by Ohio EPA, Columbus has been testing for PFAS compounds in your drinking water to be proactive and protective of public health. Several PFAS compounds have been found at very low levels, near the detection limits of the test. All the results to date have been well below the action level established by Ohio EPA.

Currently USEPA is developing a draft drinking water regulation for two PFAS compounds, PFOS and PFOA. According to the USEPA PFAS Strategic Roadmap, a new MCL should be proposed in 2023. For more information about PFAS, please visit the Ohio EPA PFAS in Drinking Water at epa.ohio.gov/monitor-pollution/pollution-issues/per-and-polyfluoroalkyl-substances-pfas.

DEFINITIONS AND TERMS

Action Level (AL)	The concentration of a contaminant, which if exceeded, triggers treatment or other requirements that a water system must follow.	Microsiemens per Centimeter (uS/cm)	Are units of measurement for electrical conductivity. Freshwater is usually between 0 and 1,500 uS/cm, while sea water has a conductivity value of about 50,000 uS/cm.
Maximum Contaminant	The level of a contaminant in drinking water, below which there is no known or expected health risk. MCLGs allow for a margin of safety.	MRDL	Maximum Residual Disinfectant Level: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
Maximum Contaminant Level	The highest level of contaminant that is allowed in drinking water. MCLs are set as close to the MCLG as feasible using the best available treatment technology.	MRDLG	Maximum Residual Disinfectant Level Goal: The level of drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
Secondary MCL (SMCL)	A nonenforceable numerical limit set by the USEPA for a contaminant on the basis of aesthetic effects to prevent an undesirable taste, odor, or appearance.	The ">" symbol	This symbol means "greater than."
N/A	Not Applicable.	The "<" symbol	This symbol means "less than." For example, a result of < 5 means that the lowest level that could be detected was 5 and the contaminant in that sample was not detected
ND	No Detect.	Per- and polyfluoroalkyl	PFAS are a group of man-made chemicals applied to many industrial, commercial and consumer products to make them waterproof, stain resistant, or nonstick. PFAS are also used in products like cosmetics, fast food packaging, and a type of firefighting foam called aqueous film forming foam (AFFF) which are used mainly on large spills of flammable liquids, such as jet fuel. PFAS are classified as contaminants of emerging concern, meaning research into the harm they may cause to human health is still ongoing.
NTU	Nephelometric Turbidity Unit (a measure of particles held in suspension in water).	Treatment Technique (TT)	A required process intended to reduce the level of a contaminant in drinking water. For Total Organic Carbon (TOC) the level must be above 1. For turbidity the level must be under 0.3 NTU 95% of the time, and always < 1 NTU.
Parts per Trillion (ppt) or	Are units of measurement for concentration of a contaminant.	Turbidity	A measurement of the cloudiness of the water. We monitor turbidity because it is a good indication of water quality and the effectiveness of our treatment process.
Nanograms per Liter (ng/L)	A part per trillion corresponds to about thirty seconds out of every 5 million years.		
Parts per Billion (ppb) or	Are units of measurement for concentration of a contaminant.		
Micrograms per Liter (ug/L)	A part per billion corresponds to one second in roughly 31.7 years		
Parts per Million (ppm) or	Are units of measurement for concentration of a contaminant.		
Milligrams per Liter (mg/L)	A part per million corresponds to one second in roughly 11.5 days.		
Grains per Gallon (gpg)	A non-metric unit of measurement for hardness used in North America.		

WATER SERVICE AREA MAP

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. Each home, school and business in the greater Columbus area receives water from one of the following three water plants.

- Dublin Road Water Plant (DRWP) serves northwestern and southwestern residents using water from Griggs and O'Shaughnessy Reservoirs.
- Hap Cremean Water Plant (HCWP) serves OSU and northern residents. The water source is the Hoover Reservoir.
- Parsons Avenue Water Plant (PAWP) draws water from wells and serves residents in the southeast.

Our Environmental Lien and AUL report to 1980 provides a summary of recorded information on a specific property from January 1st, 1980 to present time. The report is intended to assist in the search for environmental liens filed in land title records. The report will verify property ownership, links the recorded transactions which pass title from one person (and/or entity) to another, and provide information on recorded environmental liens and/or Activity and Use Limitations that have been recorded from January 1st, 1980 forward. The scope of this search is compliant with ASTM 1527-21 standards.

Our professional network of trained researchers follow established industry protocols and use client-supplied property information to complete this Environmental Lien and AUL report. The research is conducted at all appropriate government offices based on the location of the subject property. This would include City, County, State, Federal and Tribal offices as needed. The report includes:

- Current deed information (i.e. grantor, grantee, recording dates)
- Historical property transfer information from 1980 forward (i.e. grantor, grantee, recording dates)
- Legal Description
- Environmental Lien information
- Activity and Use Limitation information
- Any Environmental Liens and/or documents referencing AULs that are listed within our summary report

18'30" W., parallel to and 40.00 feet westerly (measured at right angles) from said center line of Nelson Road, a distance of 81.64 feet to a point and thence S. 19°09'30" W., continuing with a line parallel to and 40.00 feet westerly (measured at right angles) from said center line of Nelson Road, a distance of 131.50 feet to the place of beginning, containing 9.464 acres, more or less.

Excepting therefrom the following:

Beginning, for reference, at the northwest corner of the said 9.464 acre tract, said northwest corner being 40.00 feet easterly (measured at right angles) from the center of Sunbury Road and also being 235.00 feet northerly (measured at right angles) from the center line of Maryland Avenue; thence S. 86°05'30" E., 109.38 feet, in the north line of said 9.464 acre tract, to a point; thence S. 3°54'30" W., 20.00 feet, to an iron pin, the principal place of beginning of the tract herein to be conveyed, said principal place of beginning also being 215.00 feet northerly (measured at right angles) from the center line of Maryland Avenue; thence continuing S. 3°54'30" W., 16.00 feet to an iron pin; thence S. 86°05'30" E., 20.00 feet, parallel to the north line of the said 9.464 acre tract, to an iron pin; thence N. 3°54'30" E., 16.00 feet, to an iron pin; thence N. 86°05'30" W., 20.00 feet, parallel to the north line of said 9.464 acre tract to the principal place of beginning, containing 320 square feet, more or less; being the same premises conveyed to the Federal Housing Commissioner by Deed from Eastgate Apartments, Inc., dated November 6, 1963, and recorded November 6, 1963, in Deed Book 2521, page 56, Office of the Recorder, County of Franklin, State of Ohio.

TO HAVE AND TO HOLD the above granted and bargained premises with the appurtenances thereunto belonging unto the said Grantee, its successors and assigns forever.

And the said Grantor, for itself and its successors and assigns, hereby covenants with the said Grantee, its successors and assigns, that the said Grantor is the true and lawful owner of the premises and is well seized of the same in fee simple and has full power to bargain, sell and convey the same in the manner aforesaid, and that the same are free and clear of all liens and encumbrances whatsoever, except:

- (a) Restrictions, easements, right of ways, rights, reservations, exceptions, limitations agreements, covenants and conditions of record;
- (b) Encroachments, overlaps, boundary line disputes and any other matters which would be shown by an accurate survey and inspection of the premises;
- (c) Rights of parties in possession;
- (d) Utility easements;
- (e) Real estate taxes and assessments, both general and special, which are a lien but not due and payable;
- (f) Zoning ordinances and regulations.

And further, that the said Grantor will warrant and defend the said premises with the appurtenances thereunto belonging unto the said Grantee, its successors and assigns, against all lawful claims and demands whatsoever, except as aforesaid.

IN WITNESS WHEREOF, the said EASTGATE APARTMENTS, LTD., has subscribed its name to these presents, by its GENERAL PARTNER, THE ORLEAN COMPANY by ROBERT C. EBEL, President and SAM KATZ, Secretary this 11th day of April 1980.

Signed and acknowledged

RE: CITY DIRECTORY RESEARCH
1994 Maryland Avenue
Columbus, OH 43219

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

1710-2200 of Maryland Avenue
400-550 of N Nelson Road
0-650 of Sunbury Rd

General Comments

Radon test results warrant a radon mitigation system to be installed.

Invoice Details

- 1) INSTALL APPROXIMATELY 50 SUB-SLAB DEPRESSURIZATION SYSTEMS
- 2) INSTALL INTERIOR PIPING SYSTEM TO RUN THROUGH APARTMENTS AND VENT THROUGH ATTIC.
- 3) RADON FAN WILL BE INSTALLED IN ATTIC AND VENT OUT ROOF
- 4) ALL PVC PIPE WILL BE SCH 40, 3" DIAMETER AND WHITE IN COLOR.
- 5) WE WILL DRAW POWER FROM EACH INDIVIDUAL UNIT AT AT COST OF APPROXIMATELY \$90 PER YEAR (UNLESS PROPERTY CONSTRUCTION CREW WOULD RUN SEPARATE HOUSE POWER WE COULD TAP INTO)
- 6) PROPOSED HIDDEN PATH TO RUN UP THROUGH CHASE LOCATIONS IN KITCHENS AND BATHROOMS OF THE FIRST FLOOR AND RUN UP THROUGH THE ROOF TWO STORIES AND OUT THE ATTIC WITH NO EXPOSED PIPE.
WE WILL REVISIT THE SITE AFTER THE FIRST APARTMENTS ARE COMPLETED FOR ASSESMENT OF PIPE ROUTING.

PROPOSAL GUARANTEE

Radon levels guaranteed to remain below 4.0 pCi/l for 2 years from date of installation. Fan has 5 year manufacturer's guarantee from date of purchase. Buckeye Elite Property Services, LLC, MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE SAFETY OF THE US EPA'S SUGGESTED ACTION LEVEL OF 4 pCi/l. All work to be completed in a workmanlike manner according to current EPA or ASTM mitigation standards. Any deviation from the above specifications involving extra costs will be executed only upon written orders and will become an extra charge over and above this proposal. All agreements contingent upon strikes, accidents or delays beyond our control. Homeowner to carry fire, tornado, and other premises insurance. It is the homeowner's responsibility to maintain all sump pumps and to provide backup power supply in the case of power outage. This proposal is good for 30 days from the above date. Limitations of our guarantee include alterations of the system, structural alterations, water underneath the slab limiting suction, radon in the water supply, and radon in the building materials.

Ohio Department of Health Contact: (614) 644-2727

Estimated Annual Fan Electrical Operation Cost \$60

QTY	SCOPE OF WORK	PRICE	AMOUNT
1	Install an active radon mitigation systems through the use of the Sub-Slab Depressurization	\$ 65,000.00	\$65,000.00

Proposal Period: **30 Days** Guarantee Period: **2 Years** Payment Terms: **At Completion** TOTAL: **\$65,000.00**

Warranty and Service Requirements for Radon Mitigation Systems

Buckeye Elite Property Services, LLC, which is an Ohio Licensed Radon Testing and Mitigation Contractor warrants mitigation systems to be below the EPA recommended level of 4.0 pCi/L for a period of 2 years. The fan carries a 5 year manufacturer warranty. Certain materials used in the installation for radon mitigation systems installed by us have a limited life time warranty of 20 years. This includes, PVC piping, plastic sump lids and fan cover housings. The plastic membrane sheeting that's installed in crawl spaces or on earthen floors carries an 11 year warranty without contact by others. Any items including the fan unit that fails under the stated warranties will be replaced by either us or the manufacturer. The warranties remain in affect as long as nothing has been changed, removed or altered to the system or property in any way that would cause the system to malfunction. All labor/service calls are included during the first 90 days only. Damage caused by others, sump backups, flooding, earthquakes, extreme weather or other natural disasters are not covered. Items will be replaced or repaired and billed to the owner along with labor/service costs.

There are some maintenance of the system that should be performed by the homeowner, which include the following. Check and clean for debris at the exhaust port and suction port, Check all glued joints for any air or water leaks. The system may collect moisture/condensation within the piping, this is due to the moisture found under concrete slabs, basement slabs, sump pits and crawl spaces. If a gurgling sound is heard in the piping, just turn the fan unit off for a couple minutes and then restart, this is very important to do during the winter months because ice could build up in the fan housing and damage the fan which is not covered by the warranty, this may have to be done occasionally. If problem persists, call for service as soon as possible.

Re-testing should be done at least every two years or if the building undergoes significant alterations is highly recommended. This is to unsure that radon levels are not exceeding the action level of 4.0 pCi/L. Weather conditions can influence radon test results, radon testing shall not be done during long periods of rain or high winds, as this can cause radon readings to be inaccurate. If radon levels are found to be elevated after re-testing a mitigation system or after any significant alterations, we will return to address the problem and provide corrective measures per the warranty terms listed above except for significant alterations.

If you have any questions concerning the system or need any additional information, please do not hesitate to call. You may also get additional information by contacting the Ohio Dept. of Health's Radon Division at (614) 644-2727

APPENDIX I: PRIOR ENVIRONMENTAL REPORTS

**No Documents Associated

 Portland, Maine 04101

RE: Lead-Based Paint Inspection and Risk Assessment at:
Nelson Park Apartments
 1994 Maryland Avenue
 Columbus, Ohio 43219
 Bureau Veritas Project No.: 156846.22R000-001.026

To Whom it May Concern:

Bureau Veritas, with the assistance of their subcontractor Pinnacle Environmental Consultants, Inc, has completed a Lead-Based Paint (LBP) Inspection and Risk Assessment. The inspection and risk assessment were completed in general accordance with United States Department of Housing and Urban Development (HUD) *Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing*, Chapters 5 and 7 (Revised 2012). Onsite activities were performed by Charles McKee and Christian Matecki, United States Environmental Protection Agency (USEPA) Risk Assessors on May 30-June 2, 2023.

LBP Inspection – Summary of Findings

The LBP Inspection was conducted in forty-nine (49) units. The results of the inspection identified zero (0) components that are considered to contain LBP.

Visual assessment of the LBP determined that none of the components are in deteriorated condition.

LBP Risk Assessment – Summary of Findings

Dust Wipe Sampling

Dust wipe samples were collected throughout the Project in each unit accessed as part of the LBP Risk Assessment. Analysis of the samples showed that lead concentrations exceeded the HUD Guidelines (10 micrograms per square foot [ug/ft²] for floors and 50 ug/ft² for window sills) in one (1) of the four hundred and fifty-four (454) wipe samples collected.

Locations of Property-Wide Dust-Lead Hazards		
Apartment/Area	Location	Component
Unit 1902	Living Room	Floor

Please refer to the attached report prepared by Pinnacle Environmental Consultants, LLC for options for addressing dust-lead hazards and dust-lead exceedances.

Soil Sampling

The soil samples were collected from various locations throughout the Project from along the perimeter of the building. Analysis of the soil samples indicates lead concentrations that are below the HUD guidelines of 1,200 parts per million (ppm) for other areas of bare soil. No soil lead hazards were identified at the Project.

Recommendations

Based on the results of the Inspection and LBP Inspection and Risk Assessment, Bureau Veritas offers the following recommendations:

- Re-evaluation in two years from the date of this report. June 21, 2025.
- Areas listed above with dust-lead hazards should be addressed using special wet cleaning of the affected areas. Minimum specifications include HEPA vacuuming, wet wiping, and final HEPA vacuuming. The USEPA require clearance sampling following abatement activities.
- Soil sampling results were below the HUD Guidelines of 1,200 ppm for drip line samples and no further action is required with lead soil hazards at this time.

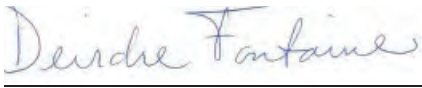

The independent conclusions represent our professional judgment based on information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by the Client or their representative has been assumed to be correct and complete. The conclusions presented are based on the data provided, observations, and conditions that existed on the date of the on site visit.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

If you have any questions regarding this report, please contact me below at (800) 733-0660, Ext. 6337.

Sincerely,

Deirdre Fontaine
Expanded Environmental Services Specialist
Bureau Veritas

- 3. Summary of Dust Wipe and Soil Laboratory Results

Disclosure Requirements

Ohio law (section 5301.30 of the Revised Code) requires every person who intends to transfer any residential real property by sale, land installment contract, lease with option to purchase, exchange, or lease for a term of ninety-nine years and renewable forever, to complete and provide a copy to the prospective transferee of the applicable property disclosure forms, disclosing known hazardous conditions of the property, including lead-based paint hazards.

Federal law (24 CFR part 35 and 40 CFR part 745) requires sellers and lessors of residential units constructed prior to 1978, except housing for the elderly or persons with disabilities (unless any child who is less than six years of age resides or is expected to reside in such housing) or any zero-bedroom dwelling to disclose and provide a copy of this report to new purchasers or lessees before they become obligated under a lease or sales contract. Property owners and sellers are also required to distribute an educational pamphlet approved by the United States Environmental Protection Agency and include standard warning language in leases or sales contracts to ensure that parents have the information they need to protect children from lead-based paint hazards.

1.0 OBJECTIVE

This report details the findings of the limited lead risk assessment performed between May 30 and June 2, 2023 by Pinnacle Environmental Consultants (Pinnacle) at Nelson Park Apartments in Columbus, Ohio. Nelson Park Apartments consists of 177 residential units in 44 buildings constructed in 1958, of which 49 units were evaluated during this risk assessment project, as indicated by the Department of Housing and Urban Development's **GUIDELINES FOR THE EVALUATION AND CONTROL OF LEAD-BASED PAINT HAZARDS IN HOUSING**. The purpose of this report is to present the results of the lead risk assessment performed at the residential apartment complex. The survey was conducted in advance of renovation activities being performed.

2.0 EXECUTIVE SUMMARY

2.1 Limited Lead Risk Assessment

A total of four hundred and fifty-four (454) dust wipe samples were collected from within the 49 randomly selected residential units, with no common area samples as all units have individual access and no common areas are present in this residential complex. The samples included fourteen blank samples, which were submitted for quality control purposes.

Mr. David Mousie, an Ohio Department of Health Licensed Lead Risk Assessor license No. LA9531, conducted the risk assessment between May 30 and June 2, 2023. All sampling was performed as outlined in the HUD Guidelines and Ohio Department of Health regulations. The specific sampling procedures utilized in this survey are described in Chapter 5 of the Guidelines and 35 CFR subpart R section 35.1320 in the federal regulation. See Appendix 2 for analytical laboratory reports and chain-of-custody information. A summary of the analytical laboratory results is presented in Appendix 3.

3.0 BACKGROUND

Nelson Park Apartments consists of 177 residential units in 44 buildings which were constructed in 1958.

4.0 LABORATORY LEAD DUST WIPE SAMPLE ANALYSIS

The lead dust wipe and soil samples were submitted to Schneider Laboratories Global, Inc., , an Environmental Lead Proficiency Analytical Testing (ELPAT) accredited laboratory, located at 2512 West Cary Street in Richmond, Virginia for analysis. See Appendix 2 for laboratory reports and chain-of-custody information.

5.0 SUMMARY OF LEAD DUST AND SOIL SAMPLE LOCATIONS ABOVE HUD/ODH LEVELS

Any sample results which exceed the established HUD and/or ODH regulatory limits are listed below:

Unit 1902	Living Room Floor	82.7 ug/ft ²
-----------	-------------------	-------------------------

Other than those listed above, all sample results were below the established regulatory levels. The HUD and ODH regulatory levels for floors inside the residence and exterior living areas or on any horizontal surface other than a window sill or trough is 40 µg/ft² with the window sill regulatory level being 250 µg/ft². A summary of sample locations and associated levels is presented in Appendix 3.

6.0 LEAD HAZARD LEVELS

Lead is hazardous, especially for children who are six years of age or younger. Lead can reduce intelligence, cause behavior and learning problems, slow growth and impair hearing. Children can get lead in their bodies by breathing or swallowing lead dust, or by eating soil or paint chips with lead in them.

Lead-Based Paint

Lead-based paint is any paint or surface coating that contains lead equal to or in excess of 1.0 milligrams per square centimeter (1.0 mg/cm²) or equal to or in excess of 0.5% by weight. **Lead-based paint is hazardous when it is:**

1. On a **friction surface**. The paint on surfaces like window sashes and jambs can break down during normal use and release lead dust. If dust levels on the nearest flat surface exceed acceptable levels, then the friction surface is a hazard.
2. On a **chewable surface** that has evidence of teeth marks. These are surfaces, such as window sills, railings, door edges and stair edges that that a young child can mouth or chew.

3. On an **impact surface** where there is damaged or otherwise deteriorated paint from impact from a related building component (such as a door and door frame banging together).
4. **Deteriorated, e.g., peeling, chipping, chalking, or cracking.** When lead paint breaks down or is disturbed due to remodeling, renovating, dry scraping or water damage, paint chips and dust can be released that can contaminate the home and be easily ingested by young children through hand-to-mouth activity.

Lead Dust Hazard Levels

- **40** micrograms per square foot ($\mu\text{g}/\text{ft}^2$) on **floors** of interior or exterior living areas or on any horizontal surface other than a window sill or trough
- **250** $\mu\text{g}/\text{ft}^2$ on interior **window sills** or exterior living area window sills
- **400** $\mu\text{g}/\text{ft}^2$ for **window troughs**

Lead Soil Hazard Levels

- **400** $\mu\text{g}/\text{g}$ (ppm or parts per million) for bare soil in **play areas** or
- **1200** ppm (composite or average) in bare soil in **non-play areas**

If the results are equal to or higher than the levels noted above, a lead hazard is present.

7.0 LEAD HAZARD CONTROL METHODS

The methods of controlling lead hazards are listed below:

- (1) **Deteriorated Lead-Based Paint on Non-friction or Non-impact Surfaces:** Examples include interior or exterior walls, ceilings, trim, casings, baseboards, etc.
 - a) **Removal** of the lead-based painted component **and replacement** with a lead-free component;
 - b) **Paint removal** by separation of the lead-based paint from the substrate using heat guns (operated below eleven hundred degrees Fahrenheit), chemicals, or certain abrasive measures either onsite or offsite;
 - c) **Enclosure** of the lead-based painted component with durable materials. Durable materials include wallboard, drywall, paneling, siding, coil stock and the sealing or caulking of edges and joints so as to prevent or control chalking, flaking, peeling, scaling or loose lead-containing substances from becoming part of house dust or otherwise accessible to children;
 - d) **Encapsulation** of the lead-based painted component by coating and sealing of the component with a durable surface coating approved in rule 3701-32-13 of the Administrative Code;
 - e) **Paint stabilization** as defined in rule 3701-32-01 of the Administrative Code and a written ongoing maintenance and monitoring schedule; or

f) Any other lead-safe method of permanently removing the lead hazard.

(2) Deteriorated Lead-Based Paint on Friction or Impact Surfaces:

Examples include window systems, doors, floors, etc.

- a) **Removal** of the lead-based painted component and replacement with lead-free components;
- b) **Lead-based paint removal** by separation of the lead-based paint from the substrate using heat guns (operated below eleven hundred degrees Fahrenheit), chemicals or certain abrasive measures either onsite or offsite;
- c) **Enclosure** of the impact surfaces with durable materials. Durable materials include wallboard, drywall, paneling, a quarter inch or thicker plywood or other underlayment for floors, coil stock and the sealing or caulking of edges and joints so as to prevent or control chalking, flaking, peeling scaling, or loose lead-containing substances from becoming part of house dust or otherwise accessible to children. The underlayment for floors must be covered with a cleanable, impermeable surface;
- d) **Elimination of the friction points** or application of a treatment that will prevent abrasion of the friction surface and a written ongoing maintenance and monitoring schedule; or
- e) Any other lead-safe method of permanently removing the lead hazard,

(3) Chewable Surfaces:

Examples include window sills, railings and other child-accessible surfaces that show evidence of teeth marks.

- a) **Removal** of the lead-based painted component **and replacement** with lead-free components;
- b) **Lead-based paint removal** by separation of the lead-based paint from the substrate using heat guns (operated below eleven hundred degrees Fahrenheit), chemicals or certain abrasive measures either onsite or offsite;
- c) **Enclosure** of the lead-based painted component with a material that cannot be penetrated by a child's teeth;
- d) **Encapsulation** of the lead-based painted component by coating and sealing of the component with a durable surface coating approved in rule 3701-32-13 of the Administrative Code; or
- e) Any other lead safe method of permanently removing the lead hazard.

(4) Lead-contaminated Dust:

- a) Elimination or control of the source creating the lead-contaminated dust using an appropriate control method listed above and followed with specialized cleaning to eliminate the lead-contaminated dust. Specialized cleaning includes the use of a HEPA vacuum, wet-mopping and/or wet-scrubbing;
- b) Elimination of the lead-contaminated dust when the source creating the lead-contaminated dust cannot be identified through specialized cleaning and a written ongoing maintenance and monitoring schedule. Specialized cleaning includes the use of a HEPA vacuum, wet-mopping or wet-scrubbing.

(5) Lead-contaminated Soil:

- a) **Covering** of the lead-contaminated bare soil with a permanent covering such as concrete or asphalt,
- b) **Removal** of the top six inches of lead-contaminated bare soil and replacing it with six inches of new soil having a lead concentration of less than two hundred parts per million;
- c) Covering of the lead-contaminated soil with an **impermanent covering** and a written ongoing maintenance and monitoring schedule. Impermanent covering includes sod and artificial turf. Gravel and mulch may be used as an impermanent covering if applied at a minimum of six inches in depth;
- d) Any other lead safe method of permanently removing the lead hazard.

(6) Lead-contaminated Water Pipes

- a) Removal of the plumbing fixtures and replacement with lead-free fixtures;
- b) Flushing of the water lines that are used for drinking or cooking for a minimum of one minute when water has not been used in the last six hours; or
- c) Any other lead safe method of permanently removing the lead hazard.

The following practices are PROHIBITED:

- (1) Open flame burning or torching;
- (2) Machine sanding or grinding without a HEPA local vacuum exhaust tool;
- (3) Abrasive blasting or sandblasting without a HEPA local vacuum exhaust tool;

- (4) Use of a heat gun operating above one thousand one hundred degrees Fahrenheit;
- (5) Charring paint;
- (6) Dry sanding;
- (7) Dry scraping, except when done as follows:
 - a) In conjunction with a heat gun operating at not more than one thousand one hundred degrees Fahrenheit;
 - b) Within one foot of an electrical outlet;
 - c) To treat defective paint spots totaling not more than two square feet in an interior room or space or twenty square feet on an exterior surface.
- (8) Uncontained hydro blasting or high-pressure washing; and
- (9) Paint stripping in a poorly ventilated space using a volatile stripper that is considered a hazardous substance under 16 C.F.R. 1500.3 or a hazardous chemical under 29 C.F.R. 1910.1200 or 29 C.F.R. 1926.59 in the type of work being performed.

Important Notes:

- Residents, especially children and pregnant women, must be kept away from the lead hazard control area. Proper and thorough cleanup is important so that dust and paint chips are not left behind at the end of the job.
- After lead hazard control work is done, the structure must pass a **clearance examination**, which may include dust wipe samples, to ensure that no lead dust, debris or paint chips are left behind.
- Paint stabilization, interim window treatments and impermanent covering of lead-contaminated soil require a written ongoing maintenance and monitoring schedule and an annual clearance examination. It is recommended that a visual check of past repairs involving painted surfaces should be done annually and at unit turnover.
- Other surfaces that measured below hazard limits should also be addressed to prevent them from becoming hazardous. It is recommended that lead-safe work practices be used when such surfaces are repaired or replaced.

8.0 CONCLUSIONS AND RECOMMENDATIONS

Lead-based paint hazards as defined by HUD, ODH and EPA, were identified in one dust sample collected from the Living Room floor in Unit 1902.

It is recommended that the suggested lead hazard control measures discussed in Section 7.0 be followed to reduce the likelihood of creating a lead hazard in the future. Pinnacle recommends compliance with 40 CFR 745, the EPA Lead Renovation, Repair, and Painting Program during renovation activities involving any of the lead containing components that were identified as well as similar components that were not tested. Pinnacle also recommends specialized cleaning activities be performed throughout the residence to reduce the lead levels found in several of the dust samples.

Permanent corrective lead hazard control measures include the removal of lead-based paint; enclosure, encapsulation, or replacement of building components coated with lead-based paint; and removal of lead-contaminated soil or overlaying of soil with a durable covering such as asphalt. (Grass, sod and mulch are considered interim control measures.)

Temporary corrective measures, using lead-safe work practices, include specialized cleaning, repairs, maintenance, temporary containment, paint stabilization and management and resident education programs. Paint stabilization is the process of repair of any underlying conditions, wet scraping, priming, and repainting surfaces; paint stabilization includes cleanup and clearance.

More information is available from a certified risk assessor, HUD's lead website (www.hud.gov/offices/lead), or the National Lead Information Clearinghouse (1-800-424-LEAD).

EPA Lead in Residential Soil

Location	Level	Unit
Play Areas	400	mg/kg
Bare Soil Average	1200	mg/kg

Minimum reporting limit: 10.0 µg. EPA does not distinguish between lead-contaminated soil and soil-lead hazards. All internal QC parameters were met. Unusual sample conditions, if any, are described. Do not reproduce this report except in full. Values are reported to three significant figures. PPM = mg/kg | PPB = µg/kg. The test results apply to the sample as received. AIHA LAP, LLC accredited for Lead (Lab ID 100527).

1. Executive Summary

Bureau Veritas performed an Asbestos Inspection that included on site observations of the accessible areas of Nelson Park Apartments (the "Project"), on May 22–June 16, 2023. The Project is located at 1994 Maryland Avenue, Columbus, Ohio 43219.

The following summarizes the independent conclusions representing Bureau Veritas's best professional judgment based on information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by the Client, owner, or their representative has been assumed to be correct and complete. Additionally, the conclusions presented are based on the conditions that existed at the time of the assessment.

Bureau Veritas collected and analyzed one thousand five hundred six (1,506) bulk samples with laboratory analysis of bulk samples showing asbestos to be present (>1% by weight) in one hundred seventy-two (172) samples. <1% Asbestos was detected in eight (8) materials.

2. Certification

Bureau Veritas has completed an Asbestos Inspection of Nelson Park Apartments (the "Project"), located at 1994 Maryland Avenue, Columbus, Ohio 43219. The inspection was performed at the Client's request using the methods and procedures consistent with good commercial and customary practice designed to conform to acceptable industry standards.

This report has been prepared for and is exclusively for the use and benefit of the Client identified on the cover page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and Bureau Veritas.

This report, or any of the information contained therein, is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of Bureau Veritas. Any reuse or distribution without such consent shall be at the client's or recipient's sole risk, without liability to Bureau Veritas.

The independent conclusions represent our professional judgment based on information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by the Client or their representative has been assumed to be correct and complete. The conclusions presented are based on the data provided, observations, and conditions that existed on the date of the onsite visit.

If you have any questions regarding this report, please contact Deirdre Fontaine at (800) 733-0660, Ext. 7296337.

Bureau Veritas

3. Survey Scope

This survey was conducted at the request of the Client for the purpose of identifying asbestos-containing materials (ACM) throughout the Project in the area to be affected by the renovation.

A Licensed Asbestos Building Inspector visually inspected the building for suspect ACMs. Methodologies used were generally consistent with USEPA publications: "Guidance for Controlling Asbestos Containing Materials in Buildings" (June 1985) and "Asbestos in Buildings: Simplified Sampling Scheme for Friable Surfacing Materials" (dated October 1985). The documents were used for their asbestos survey concepts, such as identifying homogeneous materials, quantifying materials, and evaluating friability (potential to crumble with hand pressure) and condition (good, damaged). Over 3,000 products are currently known to contain asbestos. Although no comprehensive list of asbestos containing materials exists, Bureau Veritas utilized the USEPA's "Sample List of Suspect Asbestos-Containing Materials" as a general guide to identify and document suspect asbestos containing materials within the building. In addition, in some cases, the Bureau Veritas inspector utilized their experience and the knowledge obtained through training courses to identify suspect asbestos containing materials.

During the survey, the inspector classified each suspect ACM as one of three types: 1) surfacing material applied by spray or trowel, 2) thermal system insulation on pipes, tanks, boilers and related features, or 3) miscellaneous material not classified as surfacing material or thermal system insulation. The inspector touched all assumed or suspected materials on all surfaces, including walls, ceilings, structural members, and mechanical equipment, to determine their friability, or the extent to which the material, when dry, may be crumbled, pulverized, or reduced to powder by hand pressure. It should be noted that in accordance with the Occupational Safety and Health Administration (OSHA), Asbestos Construction Standard 29 CFR 1926.1101, any thermal system insulation, surfacing materials, floor tiles, roofing felts and shingles found in buildings constructed no later than January 1, 1981 are presumed asbestos containing materials.

3.1. Limitations to the ACM Survey

Bureau Veritas inspected all reasonable accessible spaces of the building, including basements, storage rooms, utility rooms, attics, and crawl spaces.

Areas that were not accessible without significantly destructive methods (fire doors) or that were contained within non-functional building spaces or were part of energized equipment (boilers, air handlers, electrical, etc.) were not inspected. ACM in non-functional spaces would not typically be expected to pose a hazard to human health or the environment as long as these materials remain enclosed, are not part of the circulating air system and are inaccessible to the building occupants.

Suspected ACM subsequently identified or encountered in non-functional, inaccessible areas during demolition should be assumed to contain asbestos unless testing confirms otherwise. In addition, all flooring materials were not sampled under the scope of this inspection and therefore assumed asbestos containing materials.

Roofing materials were not sampled at the time of the assessment because roof sampling would invalidate existing roof warranties. Fire doors were not sampled because the damage caused by sampling would render these materials friable and may also void the fire rating. Flexible fabric vibration isolators were not sampled because the damage caused by sampling would render these materials friable and may cause a fiber release into the tempered air supply ducting. Since these materials were not sampled, they should be assumed to be asbestos-containing, unless sampled and proven otherwise. Sampling of these assumed ACMs should be performed prior to any renovation or other activity that may cause a material disturbance.

3.2. Survey and Sample Collection Procedure

The Asbestos Inspection was performed on May 22 through June 16, 2023. The inspection consisted of a walk-through and visual observations of the accessible interior areas for suspect ACM, assessing the ACM for condition, friability, and the collection of bulk samples.

Samples of suspect ACM were taken in accordance with USEPA protocol and were collected by Michael Rombke who is an Ohio Licensed Asbestos Inspector. A total of one thousand five hundred six (1,506) bulk samples were collected and analyzed to facilitate the inspection. All samples were transported for analysis to Schneider Laboratories Global, Inc., and Pinnacle Consultants both of which are accredited by the American Industrial Hygiene Association (AIHA) and successfully participates in the National Voluntary Laboratory Accreditation Program (NVLAP). Rigorous chain-of-custody guidelines were followed to ensure proper handling and delivery of the samples.

The samples were analyzed for asbestos by polarized light microscopy (PLM) in accordance with the "EPA Method for the Determination of Asbestos in Bulk Building Materials." Analysis was performed by using the bulk sample for visual observation and slide preparation, and for microscopic examination and identification. The samples were mounted on slides and then analyzed for asbestos (chrysotile, amosite, crocidolite, anthophyllite, actinolite/tremolite), and fibrous non-asbestos constituents (mineral wool, fiberglass, cellulose, etc.). Asbestos was identified by refractive indices, morphology, color, and signs of elongation. The same characteristics were used to identify the non-asbestos constituents. The microscopist visually estimated relative amounts of each constituent by determining the volume of each constituent in proportion to the total volume of the sample, using a stereoscope.

During the inspection, location and friability of each suspect material were recorded.

3.3. Summary of Laboratory Results

3.3.1. ASBESTOS-CONTAINING MATERIALS

The table below describes materials that were sampled as part of the inspection and found to contain asbestos by laboratory analysis via PLM. Sample numbers presented in the tables correspond to the sample numbers on the Laboratory Analysis Reports, which are included in Appendix A. Also presented below are the assessed friability, condition, and approximate quantity for each identified ACM.

Nelson Park Apartments 1994 Maryland Avenue, Columbus, Ohio 43219 ACM						
Sample Number	Material Description	Location	Friable	% Asbestos	Condition	Estimated Quantity
Building 1 Units 500 - 506						
1433, 1434, 1435	Paper Wrap on Duct	Unit 500 - Front Bedroom in Wall	Yes	40% Chrysotile	Intact	4 SF
1436	Paper Wrap on Duct	Unit 500 - Front Bedroom in Ceiling	Yes	40% Chrysotile	Intact	10 SF
1449	Joint Compound	Unit 502 – Furnace Room	Yes	2% Chrysotile	Intact	4 LF
Building 2 Units 494, 496 and 1864						
1483	Paper Tape	Unit 494 – Furnace Room Duct	Yes	60% Chrysotile	Intact	12 SF
1491	Drywall and Joint Compound	Unit 496 – Furnace Room Wall	Yes	2% Chrysotile	Intact	108 SF
Building 3 Units 1872 to 1878						
1520	Paper Tape	Unit 1872 – Furnace Room Duct	Yes	60% Chrysotile	Intact	4 SF
1521	Vibration Joint	Unit 1874 – Furnace Room Duct	Yes	60% Chrysotile	Intact	4 SF

Building 4 Units 1900 to 1906						
1552	Paper Tape	Unit 1906 – Duct in Bathroom Floor	Yes	60% Chrysotile	Intact	2 SF
1564	Paper Wrap	Unit 1902 – Duct in Front Room Floor	Yes	45% Chrysotile	Intact	2 SF
Building 5 Units 1912 to 1918						
1582	Paper Wrap	Unit 1914 - Duct in Bedroom - 1	Yes	60% Chrysotile	Intact	2 SF

Building 37 – 2090, 2092, 2094, 2096						
2601	Drywall Tape and Compound	Unit 2090 – Living Room Closet Wall	Yes	2% Chrysotile	Intact	100 SF
2618	Paper Tape	Unit 2090 – Furnace Room Duct	Yes	85% Chrysotile	Intact	4 SF
2620	Paper Wrap on Duct	Unit 2090 – Bedroom 1 in Wall	Yes	90% Chrysotile	Intact	20 SF
2945	Exterior Caulk	Unit A – Door	No	2% Chrysotile	Intact	570 LF

Building 38 – 2100 – A, B, C, D						
2631	Drywall Tape and Compound	Unit D – Living Room Closet Wall	Yes	2% Chrysotile	Intact	100 SF
2648	Paper Tape	Unit D – Duct in Bath	Yes	85% Chrysotile	Intact	4 SF
2650	Paper Wrap on Duct	Unit D – Bedroom 1 in Wall	Yes	90% Chrysotile	Intact	20 SF
2947	Exterior Caulk	Unit A – Door	No	2% Chrysotile	Intact	570 LF
Building 39 – 2102 – A, C, D Laundry						
2661	Drywall Tape and Compound	Unit D – Living Room Closet	Yes	2% Chrysotile	Intact	100 SF
2678	Paper Tape	Unit D – Duct in Den	Yes	85% Chrysotile	Intact	4 SF
2680	Paper Wrap on Duct	Unit D – Bedroom 1 in Wall	Yes	90% Chrysotile	Intact	20 SF
2949	Exterior Caulk	Unit B – Door	No	2% Chrysotile	Intact	570 LF
Building 40 – 2104 – A, B, C, D						
2701	Drywall Tape and Compound	Unit A – Living Room Closet Wall	Yes	2% Chrysotile	Intact	100 SF
2718	Paper Tape	Unit C – Furnace Room on Duct	Yes	82% Chrysotile	Intact	4 SF
2720	Paper Wrap on Duct	Unit D – Bedroom 1 in Wall	Yes	90% Chrysotile	Intact	20 SF
2951	Exterior Caulk	Unit A – Door	No	2% Chrysotile	Intact	570 LF

Building 41 – 2106, 2108, 2110, 2112						
2106	Drywall Tape and Compound	Unit 2106 – Living Room Closet Wall	Yes	2% Chrysotile	Intact	100 SF
2736	Drywall Composite	Unit 2110 – Living Room Closet Wall	Yes	<1% Chrysotile	Intact	100 SF
2748	Paper Tape	Unit 2106 – Furnace Room on Duct	Yes	85% Chrysotile	Intact	4 SF
2750	Paper Wrap on Duct	Unit 2112 – Bedroom 1 in Wall	Yes	85% Chrysotile	Intact	20 SF
2953	Exterior Caulk	Unit A – D Door	No	2% Chrysotile	Intact	570 LF
Building 42 – 445, 447, 449, 451						
2761	Drywall Tape and Compound	Unit 449 – Living Room Closet Wall	Yes	2% Chrysotile	Intact	100 SF
2763	Drywall Composite	Unit 449 – Living Room Closet Wall	Yes	<1% Chrysotile	Intact	100 SF
2778	Paper Tape	Unit 449 – Duct in Den	Yes	88% Chrysotile	Intact	4 SF
2780	Paper Wrap on Duct	Unit 451 – Bedroom 1 in Wall	Yes	88% Chrysotile	Intact	20 SF
Building 43 – 455, 457, 459, 461						
2794	Drywall Tape and Compound	Unit 455 – Living Room Closet Wall	Yes	2% Chrysotile	Intact	100 SF
2808	Paper Tape	Unit 461 – Furnace Room on Duct	Yes	85% Chrysotile	Intact	4 SF
2810	Paper Wrap on Duct	Unit 455 – Bedroom 1 in Wall	Yes	90% Chrysotile	Intact	20 SF

Building 44 – 1994, 2000, Laundry, Meeting						
2841	Drywall Tape and Compound	Unit 1994 – 3 rd Floor Room Wall	Yes	2% Chrysotile	Intact	882 SF
2858	Paper Tape	Unit 1994 – Furnace Room on Duct	Yes	90% Chrysotile	Intact	4 SF
2860	Paper Wrap on Duct	Unit 2000 – Bedroom 2 in Wall	Yes	90% Chrysotile	Intact	20 SF
2910	Exterior Caulk	Unit 2000 – Door	No	2% Chrysotile	Intact	570 LF
Maintenance Building						
2821	Drywall Tape and Compound	Shope Area Wall	Yes	2% Chrysotile	Intact	2560 SF
2827	Aircell Insulation	Top of Abandon in Wall Heater	Yes	90% Chrysotile	Intact	2 SF
Old Office						
2833	Drywall Composite	Entry Wall	Yes	<1% Chrysotile	Intact	224 SF
2834	Drywall Tape and Compound	Office Wall	Yes	2% Chrysotile	Intact	1680 SF
2837	Paper Tape	Duct Work in Basement	Yes	90% Chrysotile	Intact	18 SF
2959	Exterior Caulk	Building 2120 – Door	No	2% Chrysotile	Intact	570 LF

The USEPA and State of Ohio define asbestos-containing materials (ACM) as those which contain greater than one percent asbestos. Of the one thousand five hundred six (1,506) samples that were analyzed, one hundred seventy-two (172) materials were found to contain asbestos.

3.3.2. NON-ASBESTOS MATERIALS

The table below describes the materials that were sampled as part of the inspection at the Project and found not to contain asbestos by laboratory analysis via PLM. Sample numbers presented in the tables correspond to the sample numbers on the Laboratory Analysis Reports, which are included in Appendix A.

Nelson Park Apartments 1994 Maryland Avenue, Columbus, Ohio 43219 Negative Materials			
Sample Number	Material	Friable/Non-Friable	Condition
Building 1 Units 500 - 506			
1431, 1432, 1438, 1439, 1440	White Joint Compound	Friable	Intact
1437, 1448	Brown Cove Base and associated Mastic	Non-Friable	Intact
1441, 1446	Gray Blow-In Insulation	Friable	Intact
1442, 1447	Brown Blow-In Insulation	Friable	Intact
1443	Drywall Texture	Friable	Intact
1444, 1445, 1455, 1456	Rough Drywall Texture	Friable	Intact
1450, 1451, 1459, 1460, 1461	Drywall	Friable	Intact
1453, 1454	Ceiling Texture	Friable	Intact
1458, 1462	Vibration Joint	Non-Friable	Intact
2871, 2872	Exterior Caulk	Non-Friable	Intact

Building 2 Units 494, 496 and 1864			
1471, 1472, 1473, 1494, 1495	Ceiling Texture	Friable	Intact
1474, 1475, 1476, 1477, 1496, 1497, 1498	Drywall Texture	Friable	Intact
1478, 1479	Gray Blow-In Insulation	Friable	Intact
1480, 1481, 1482, 1492, 1493	Drywall and Compound	Friable	Intact
1484, 1489	Vibration Joint	Friable	Intact
1485, 1486	Brown Blow-In Insulation	Friable	Intact
1487, 1499	Brown Cove Base and associated Mastic	Non-Friable	Intact
1488, 1500	White Interior Caulk	Non-Friable	Intact
2873, 2874	Exterior Caulk	Non-Friable	Intact
Building 3 Units 1872 to 1878			
1501, 1502, 1503, 1504, 1505, 1506, 1507	Drywall Texture	Friable	Intact
1508, 1509, 1510, 1511, 1512	Ceiling Texture	Friable	Intact
1513, 1514, 1515, 1516, 1517, 1518	Drywall Tape and Compound	Friable	Intact
1523, 1524	White Interior Caulk	Non-Friable	Intact
1525, 1526	Brown Cove Base	Non-Friable	Intact
1527, 1528	Gray Blow-In Insulation	Friable	Intact
1529, 1530	Brown Blow-In Insulation	Friable	Intact
2875, 2875	Exterior Caulk	Non-Friable	Intact

Building 4 Units 1900 to 1906			
1541, 1542, 1543, 1544, 1545, 1546	Drywall Tape and Compound	Friable	Intact
1547, 1548, 1549, 1550, 1551, 1567, 1568, 1569	Ceiling Texture	Friable	Intact
1554, 1555	Vibration Joint	Friable	Intact
1558, 1559	Brown Cove Base	Non-Friable	Intact
1560, 1561	Gray Blow-In Insulation	Friable	Intact
1562, 1563	Brown Blow-In Insulation	Friable	Intact
2877, 2878	Exterior Caulk	Non-Friable	Intact
Building 5 Units 1912 to 1918			
1571, 1573, 1575, 1576	Drywall Tape and Compound	Friable	Intact
1572, 1575	Drywall Board	Friable	Intact
1577, 1578, 1579, 1580, 1581	Ceiling Texture	Friable	Intact
1584, 1585	Vibration Joint	Friable	Intact
1586, 1587	White Interior Caulk	Non-Friable	Intact
1588, 1589	Gray Blow-In Insulation	Friable	Intact
1590, 1591	Brown Blow-In Insulation	Friable	Intact
1592, 1593	Brown Cove Base	Non-Friable	Intact
1597, 1598, 1599, 1600, 1601	Drywall Texture	Friable	Intact

Building 6 Units 1922 to 1928			
1611, 1613	Drywall Tape and Compound	Friable	Intact
1614, 1616	Drywall Composite	Friable	Intact
1612, 1615	Drywall Board	Friable	Intact
1617, 1618, 1619, 1620, 1621	Ceiling Texture	Friable	Intact
1624, 1625	Vibration Joint	Friable	Intact
1626, 1627	White Interior Caulk	Non-Friable	Intact
1628, 1629	Gray Blow-In Insulation	Friable	Intact
1630, 1631	Brown Blow-In Insulation	Friable	Intact
1632, 1633	Brown Cove Base	Non-Friable	Intact
2881, 2882	Exterior Caulk	Non-Friable	Intact
Building 7 Units 1934 – A, B, C, D			
1641, 1643	Drywall Tape and Compound	Friable	Intact
1644, 1646	Drywall Composite	Friable	Intact
1642, 1645	Drywall Board	Friable	Intact
1647, 1648, 1649, 1650, 1651	Ceiling Texture	Friable	Intact
1654, 1655	Vibration Joint	Friable	Intact
1656, 1657	White Interior Caulk	Non-Friable	Intact
1658, 1659	Gray Blow-In Insulation	Friable	Intact
1660, 1661	Brown Blow-In Insulation	Friable	Intact
1622, 1663	Brown Cove Base	Non-Friable	Intact

Building 8 Units 1938 – A, B, C, D			
1742, 1743	Drywall Board	Friable	Intact
1745, 1746	Drywall Composite	Friable	Intact
1747, 1748, 1749, 1750, 1751	Ceiling Texture	Friable	Intact
1754, 1755	Vibration Joint	Friable	Intact
1756, 1757	White Interior Caulk	Non-Friable	Intact
1758, 1759	Gray Blow-In Insulation	Friable	Intact
1760, 1761	Brown Blow-In Insulation	Friable	Intact
1762, 1763	Brown Cove Base	Non-Friable	Intact
2885, 2886	Exterior Caulk	Non-Friable	Intact
Building 9 Units 1940 – A, B, C, D			
1711, 1714	Drywall Tape and Compound	Friable	Intact
1712, 1715	Drywall Board	Friable	Intact
1717, 1718, 1719, 1720, 1721	Ceiling Texture	Friable	Intact
1726, 1727	White Interior Caulk	Non-Friable	Intact
1728, 1729	Gray Blow-In Insulation	Friable	Intact
1730, 1731	Brown Blow-In Insulation	Friable	Intact
1732, 1733	White Cove Base	Non-Friable	Intact

Building 10 – 1942 – A, B, C, D			
1671, 1674	Drywall Tape and Compound	Friable	Intact
1672, 1675	Drywall Board	Friable	Intact
1673, 1676	Drywall Composite	Friable	Intact
1677, 1678, 1679, 1680	Ceiling Texture	Friable	Intact
1684, 1685	Vibration Joint	Friable	Intact
1686, 1687	White Interior Caulk	Non-Friable	Intact
1688, 1689	Gray Blow-In Insulation	Friable	Intact
1690, 1691	Brown Blow-In Insulation	Friable	Intact
1692, 1693	Brown Cove Base	Non-Friable	Intact
1694, 1695, 1696	Paper Wrap on Duct	Friable	Intact
1700, 1701, 1702, 1703, 1704	Texture on Drywall	Friable	Intact
Building 11 Unit 1950 - 1956			
1772, 1775	Drywall Board	Friable	Intact
1773, 1776	Drywall Composite	Friable	Intact
1777, 1778, 1779, 1780, 1781	Ceiling Texture	Friable	Intact
1786, 1787	White Interior Caulk	Non-Friable	Intact
1788, 1789	Gray Blow-In Insulation	Friable	Intact
1790, 1791	Brown Blow-In Insulation	Friable	Intact
1792, 1793	Brown Cove Base	Non-Friable	Intact
2891, 2892	Exterior Caulk	Non-Friable	Intact

Building 12 – 1958 – A, B, C, D			
1801, 1803	Drywall Tape and Compound	Friable	Intact
1804, 1806	Drywall Composite	Friable	Intact
1802, 1805	Drywall Board	Friable	Intact
1807, 1808, 1809, 1810, 1811	Ceiling Texture	Friable	Intact
1812, 1813	Paper Tape	Friable	Intact
1816, 1817	White Interior Caulk	Non-Friable	Intact
1818, 1819	Gray Blow-In Insulation	Friable	Intact
1820, 1821	Brown Blow-In Insulation	Friable	Intact
1822, 1823	Brown Cove Base	Non-Friable	Intact
1824, 1825, 1826	Paper Wrap on Duct	Friable	Intact
Building 13 – 1960 – A, B, C, D			
1832, 1833	Dry Board	Friable	Intact
1835, 1836	Drywall Composite	Friable	Intact
1837, 1838	White Interior Caulk	Non-Friable	Intact
1839, 1840	Brown Cove Base	Non-Friable	Intact
1841, 1842, 1843, 1844, 1845	Ceiling Texture	Friable	Intact
1851, 1852	Paper Wrap on Duct	Friable	Intact
1853, 1854	Gray Blow-In Insulation	Friable	Intact
1855, 1856	Brown Blow-In Insulation	Friable	Intact
1857, 1858, 1859	Rough Texture on Drywall	Friable	Intact

Building 14 – 1962 – A, B, C, D			
1862, 1865	Drywall Board	Friable	Intact
1867, 1868	White Interior Caulk	Non-Friable	Intact
1869, 1870	Brown Cove Base	Non-Friable	Intact
1871, 1872, 1873, 1874, 1875	Ceiling Texture	Friable	Intact
1876, 1877	Vibration Joint	Friable	Intact
1881, 1882	Paper Wrap on Duct	Friable	Intact
1883, 1884	Gray Blow-In Insulation	Friable	Intact
1885, 1886	Brown Blow-In Insulation	Friable	Intact
1887, 1888, 1889	Rough Texture on Wall	Friable	Intact
Building 15 – 1964, 1966, 1970, 1972			
1891, 1893	Drywall Tape and Compound	Friable	Intact
1894, 1896	Drywall Composite	Friable	Intact
1892, 1895	Drywall Board	Friable	Intact
1897, 1898	White Interior Caulk	Non-Friable	Intact
1899, 1900	Brown Cove Base	Non-Friable	Intact
1901, 1902, 1903, 1904, 1905	Ceiling Texture	Friable	Intact
1906, 1907	Vibration Joint	Friable	Intact
1911, 1912	Paper Wrap on Duct	Friable	Intact
1913, 1914	Gray Blow-In Insulation	Friable	Intact
1915, 1916	Brown Blow-In Insulation	Friable	Intact

Building 16 – 1978 – A, B, C, D			
1922, 1925	Drywall Board	Friable	Intact
1927, 1928	White Interior Caulk	Non-Friable	Intact
1929, 1930	Brown Cove Base	Non-Friable	Intact
1931, 1932, 1933, 1934, 1935	Ceiling Texture	Friable	Intact
1936, 1937	Vibration Joint	Friable	Intact
1941, 1942	Paper Wrap on Duct	Friable	Intact
1943, 1944	Gray Blow-In Insulation	Friable	Intact
1945, 1946	Brown Blow-In Insulation	Friable	Intact
1947, 1948, 1949, 1950, 1951, 1952, 1953	Rough Texture on Drywall	Friable	Intact
2901, 2902	Exterior Caulk	Non-Friable	Intact
Building 17 – 1982 – A, B, C, D			
1962, 1965	Drywall Board	Friable	Intact
1967, 1968	White Interior Caulk	Non-Friable	Intact
1969, 1970	Brown Cove Base	Non-Friable	Intact
1971, 1972, 1973, 1974, 1975	Ceiling Texture	Friable	Intact
1976, 1977	Vibration Joint	Friable	Intact
1981, 1982	Paper Wrap on Duct	Friable	Intact
1983, 1984, 1985, 1986, 1987, 1988, 1989	Rough Texture on Drywall	Friable	Intact

Building 18– 1984 – A, B, C, D			
1922, 1995	Drywall Board	Friable	Intact
1993, 1996	Drywall Composite	Friable	Intact
1997, 1998	White Interior Caulk	Non-Friable	Intact
1999, 200	Cove Base	Non-Friable	Intact
2001, 2002, 2003, 2004, 2005	Ceiling Texture	Friable	Intact
2006, 2007	Vibration Joint	Friable	Intact
2011, 2012	Paper Wrap on Duct	Friable	Intact
2013, 2014	Gray Blow-In Insulation	Friable	Intact
2015, 2016, 2017, 2018, 2019, 2020	Rough Texture on Drywall	Friable	Intact
Building 19– 1986 – A, B, C, D			
2032, 2035	Drywall Board	Friable	Intact
2033, 2036	Drywall Composite	Friable	Intact
2037, 2038	Vibration Joint	Friable	Intact
2041, 2042, 2043, 2044, 2045	Ceiling Texture	Friable	Intact
2046, 2047, 2048, 2049, 2050, 2051	Rough Texture on Drywall	Friable	Intact
2907, 2908	Exterior Caulk	Non-Friable	Intact

Building 20 – 2004 – A, B, C, D			
2062, 2065	Drywall Board	Friable	Intact
2063, 2066	Drywall Composite	Friable	Intact
2067, 2068	White Interior Caulk	Non-Friable	Intact
2069, 2070	Cove Base	Non-Friable	Intact
2071, 2072, 2073, 2074, 2075	Ceiling Texture	Friable	Intact
2076, 2077	Vibration Joint	Friable	Intact
2082, 2083	Gray Blow-In Insulation	Friable	Intact
2084, 2085, 2086, 2087, 2088, 2089, 2090	Rough Texture on Drywall	Friable	Intact
Building 21 – 2006 – A, B, C, D			
2092, 2095	Drywall Board	Friable	Intact
2093, 2096	Drywall Composite	Friable	Intact
2097, 2098	White Interior Caulk	Non-Friable	Intact
2099, 2100	Cove Base	Non-Friable	Intact
2101, 2102, 2103, 2104, 2105	Ceiling Texture	Friable	Intact
2106, 2107	Vibration Joint	Friable	Intact
2112, 2113, 2114, 2115, 2116, 2117, 2118	Rough Ceiling Texture	Friable	Intact
2119, 2120	Brown Blown-In Insulation	Friable	Intact
2121, 2122	Gray Blow-In Insulation	Friable	Intact
2913, 2914	Exterior Caulk	Non-Friable	Intact

Building 22 – 2010 – A, B, C, D			
2132, 2135	Drywall Board	Friable	Intact
2137, 2138	White Interior Caulk	Non-Friable	Intact
2139, 2140	Cove Base	Non-Friable	Intact
2141, 2142, 2143, 2144, 2145	Ceiling Texture	Friable	Intact
2146, 2147	Vibration Joint	Friable	Intact
2152, 2153, 2154, 2155, 2156, 2157, 2158	Rough Texture on Drywall	Friable	Intact
Building 23 – 2014 – A, B, C, D			
2162, 2165	Drywall Board	Friable	Intact
2163, 2166	Drywall Composite	Friable	Intact
2167, 2168	White Interior Caulk	Non-Friable	Intact
2169, 2170	Cove Base	Non-Friable	Intact
2171, 2172, 2173, 2174, 2175	Ceiling Texture	Friable	Intact
2176, 2177	Vibration Joint	Friable	Intact
2182, 2183, 2184, 2185, 2186, 2187, 2188	Rough Texture on Drywall	Friable	Intact
2189, 2190	Brown Blow-In Insulation	Friable	Intact

Building 24 – 2020, 2022, 2024, 2026			
2192, 2195	Drywall Board	Friable	Intact
2193, 2196	Drywall Composite	Friable	Intact
2197, 2198	White Interior Caulk	Non-Friable	Intact
2199, 2200	White Cove Base	Non-Friable	Intact
2201, 2202, 2203, 2204, 2205	Ceiling Texture	Friable	Intact
2206, 2207	Vibration Joint	Friable	Intact

4. Conclusions and Recommendations

On May 22 through June 16, 2023, Bureau Veritas completed this Asbestos Inspection of Nelson Park Apartments (the "Project"), located at 1994 Maryland Avenue in Columbus, Ohio. A total of one thousand five hundred six (1,506) bulk samples with laboratory analysis of bulk samples showing asbestos to be present (>1% by weight) in one hundred seventy-two (172) samples. <1% Asbestos was detected in eight (8) materials.

Bulk samples were collected and analyzed to facilitate the inspection.

The following were identified as friable asbestos-containing materials identified on the property:

- Paper wrap on duct
- Drywall tape and compound
- Vibration Joint
- Paper tape on duct
- Rough texture on drywall
- Drywall composite

The following were identified as non-friable asbestos-containing materials identified on the property:

- Cove Base
- Exterior caulk

The following were identified to contain less than one percent asbestos:

- Drywall composite
- Rough texture on drywall

The remaining materials were found to have no asbestos detected by laboratory analysis via PLM.

4.1. Recommendations

Bureau Veritas offers the following recommendations:

- If any ACMs are friable or will be disturbed as a result of renovation or demolition activities they should be removed by a State of Ohio certified asbestos abatement contractor prior to disturbance. Any such abatement projects should be monitored by a qualified industrial hygiene firm for worker and environmental safety.
- Any ACMs that will not be disturbed should be managed in place using an O&M Program. This should include, at a minimum repair of damaged ACM's. As part of an O&M Program any contractors bidding on or performing work in the area should be made aware of the presence and locations of ACM's.
- Any repair and maintenance activities where the ACM is going to be disturbed and may release fibers must be performed by personnel with a minimum of 16-hour OSHA Class III training. Any maintenance or custodial activities where ACM may be contacted but will not likely be disturbed should be performed by personnel with a minimum of 2 hour OSHA Class IV training. All training should comply with 29 CFR 1926.1101(k)(9)(vi)

517942-005	05/22/23	23MR-1435	Bldg 1 500 To 506		
Layer 1:	Fibrous Material				
Not analyzed due to positive stop instructions.					
517942-006	05/22/23	23MR-1436	Bldg 1 500 To 506		
Layer 1:	Fibrous Material Gray, Fibrous			40% CHRYSOTILE	40% CELLULOSE FIBER 20% NON FIBROUS MATERIAL

Reporting Limit: 1% Gravimetrically Reduced Reporting Limit: 0.01% PLM analysis is based on Visual Estimation and NESHAP recommends that any friable sample with an asbestos content less than 10 percent be verified by Point Count or TEM Analysis. The EPA recommends that any attic loose fill vermiculite should be treated as asbestos containing material. This report must not be reproduced except in full with the approval of the laboratory. The test results apply to the sample as received.

Not analyzed due to positive stop instructions.					
517942-023	05/22/23	23MR-1453	Bldg 1 500 To 506		
Layer 1:	Texture White, Granular			No Asbestos Detected	100% NON FIBROUS MATERIAL
517942-024	05/22/23	23MR-1454	Bldg 1 500 To 506		
Layer 1:	Joint Compound White, Granular			No Asbestos Detected	100% NON FIBROUS MATERIAL

Reporting Limit: 1% Gravimetrically Reduced Reporting Limit: 0.01% PLM analysis is based on Visual Estimation and NESHAP recommends that any friable sample with an asbestos content less than 10 percent be verified by Point Count or TEM Analysis. The EPA recommends that any attic loose fill vermiculite should be treated as asbestos containing material. This report must not be reproduced except in full with the approval of the laboratory. The test results apply to the sample as received.

RE: Bldg 13 1960 - A,B,C,D

Analytical Method: Polarized light microscopy using dispersion staining (App. E to Sub. E of 40 CFR Part 763 and EPA/600/R-93/116). PLM should not be used to demonstrate the absence of asbestos in floor tiles. All samples will be held for thirty (30) days unless otherwise requested. This report relates only to the items as received and makes no statement as to the contents of surrounding materials.. Multi-layered material which have distinct and separable layers shall be reported separately. This report shall not be reproduced, except in full, without written permission. The results of this report should not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the U.S. Government.

Analytical Method: Polarized light microscopy using dispersion staining (App. E to Sub. E of 40 CFR Part 763 and EPA/600/R-93/116). PLM should not be used to demonstrate the absence of asbestos in floor tiles. All samples will be held for thirty (30) days unless otherwise requested. This report relates only to the items as received and makes no statement as to the contents of surrounding materials. Multi-layered material which have distinct and separable layers shall be reported separately. This report shall not be reproduced, except in full, without written permission. The results of this report should not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the U.S. Government.

Analytical Method: Polarized light microscopy using dispersion staining (App. E to Sub. E of 40 CFR Part 763 and EPA/600/R-93/116). PLM should not be used to demonstrate the absence of asbestos in floor tiles. All samples will be held for thirty (30) days unless otherwise requested. This report relates only to the items as received and makes no statement as to the contents of surrounding materials. Multi-layered material which have distinct and separable layers shall be reported separately. This report shall not be reproduced, except in full, without written permission. The results of this report should not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the U.S. Government.

PLM Analysis

Sample ID	Collected	Cust. ID	Location	Asbestos Fibers	Other Materials
518786-001	05/23/23	23MR-1501	Bldg 3 1872-1878		
Layer 1: Texture White, Granular				No Asbestos Detected	100% NON FIBROUS MATERIAL
518786-002	05/23/23	23MR-1502	Bldg 3 1872-1878		
Layer 1: Texture White, Granular				No Asbestos Detected	100% NON FIBROUS MATERIAL
518786-003	05/23/23	23MR-1503	Bldg 3 1872-1878		
Layer 1: Texture White, Granular				No Asbestos Detected	100% NON FIBROUS MATERIAL
518786-004	05/23/23	23MR-1504	Bldg 3 1872-1878		
Layer 1: Texture White, Granular				No Asbestos Detected	100% NON FIBROUS MATERIAL
518786-005	05/23/23	23MR-1505	Bldg 3 1872-1878		
Layer 1: Texture White, Granular				No Asbestos Detected	100% NON FIBROUS MATERIAL
518786-006	05/23/23	23MR-1506	Bldg 3 1872-1878		
Layer 1: Texture White, Granular				No Asbestos Detected	100% NON FIBROUS MATERIAL
518786-007	05/23/23	23MR-1507	Bldg 3 1872-1878		
Layer 1: Texture White, Granular				No Asbestos Detected	100% NON FIBROUS MATERIAL

Reporting Limit: 1% Gravimetrically Reduced Reporting Limit: 0.01% PLM analysis is based on Visual Estimation and NESHAP recommends that any friable sample with an asbestos content less than 10 percent be verified by Point Count or TEM Analysis. The EPA recommends that any attic loose fill vermiculite should be treated as asbestos containing material. This report must not be reproduced except in full with the approval of the laboratory. The test results apply to the sample as received.
