

Before you contact OHFA, please read through the entirety of the document. Frequently Asked Questions about the data and the process are included at the bottom of this document, as are data and methodology notes. If you have questions regarding the map after reading each of these, please contact Katie Fallon (kfallon@ohiohome.org).

INSTRUCTIONS FOR NEW AFFORDABILITY: URBAN OPPORTUNITY HOUSING POOL

These instructions include details for using the New Affordability: Urban Opportunity Housing pool interactive map. This map includes data layers that correspond to the following competitive criteria:

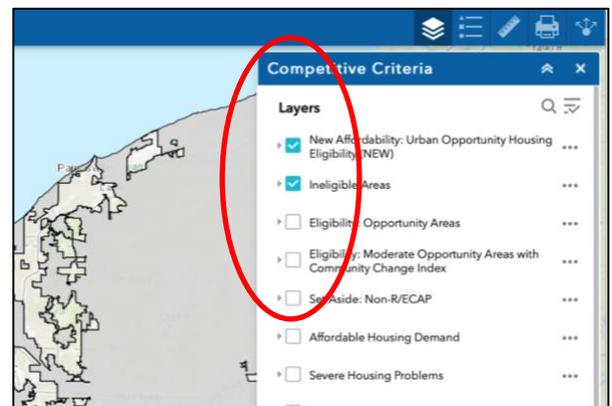

- Eligibility: Opportunity Areas
- Eligibility: Moderate Opportunity Areas with Community Change Index
- Set Aside: Non-R/ECAP Affordable Housing Demand
- Severe Housing Problems
- Transportation
- Education
 - o Gap closing grade
 - o Overall district grade
 - o Performance index grade
- Low Poverty Area Below 10%
- Low Poverty Area Below 15%
- Entry Level Job Access
- Proximity to amenities*
 - o Full service supermarket
 - o Restaurant or café
 - o Pharmacy or medical clinics
 - o Public park
 - o Public library
 - o Church or religious building
 - o Public school

*Datasets for public recreation centers and cultural facilities are not included.

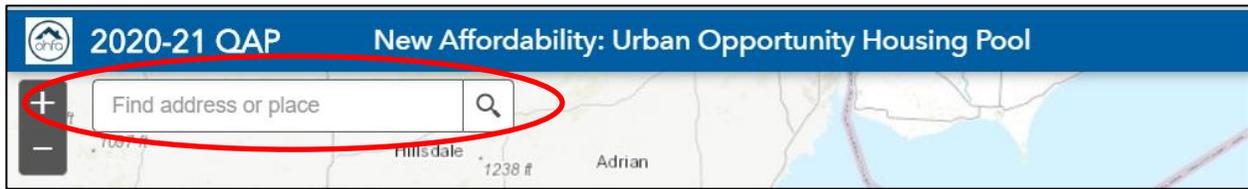

Step 1: Navigate to the map page using [this hyperlink](#).

Step 2: A list of the relevant geographic layers needed for your application will appear when you enter. The layers outlining the eligible and ineligible areas (in gray) for the New Affordability: Urban Opportunity Housing pool will be turned on.

If you would like to see how each of these layers are distributed throughout the state, you can click on the small box on the left-hand side of the name to turn that layer on. For best results, turn each layer on one at a time.

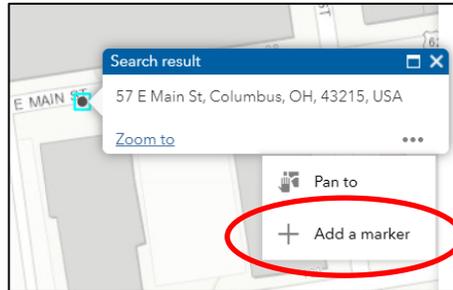

Step 3: In the “Find Address or Place” tool on the upper left-hand side of the website, enter the address of your proposed property. Note that only locations in Ohio will appear as options. The map will zoom to your property. Check that the property address is correct.

Step 4: Click on the three dots and select “Add a marker”. This will place a blue marker symbol on your screen – indicating the location of your proposed property.

If your property does not yet have an address, turn on the eligibility layer and enter an approximate address or street name into the “Find Address or Place” tool. Move the map so that you have located your site and click on the spot where you would like to add a marker. Click on the three dots and select “Add a marker.” This will place a blue marker symbol on your screen.

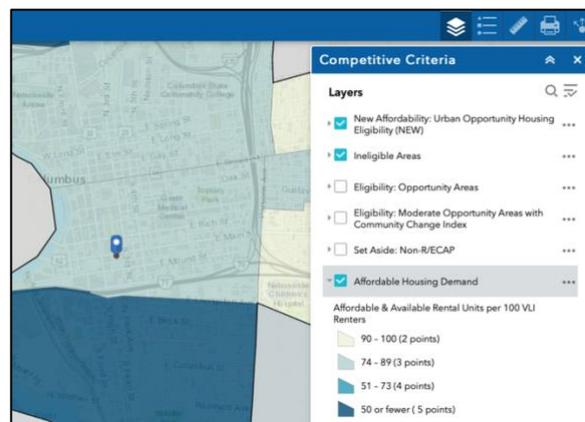

Step 5: Using the Zoom + and Zoom – buttons on the upper left side of the screen, zoom out from your proposed location 4 times. This will provide a broader view of your location and the surrounding region. This view is approximately 3.9 miles north/south by 6.7 miles east/west. This will provide a sufficiently large view to incorporate the 1-mile buffers required for this sub-pool.

Step 6: Return to the right side of the screen – where the Competitive Criteria layers are displayed. These are the layers that are necessary for your application.

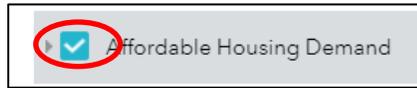

6.1 - Layer Instructions: For the following layers you will only need to select one layer at a time: Eligibility: Opportunity Areas, Eligibility: Moderate Opportunity Areas with Community Change Index, Set Aside: Non R/ECAP, Affordable Housing Demand, Severe Housing Problems, Transportation, Education 2019 (Gap Closing Grade), Education 2019 (Overall District Grade), Education 2019 (Performance Index Grade), Low Poverty Area: Below 10%, Low Poverty Area: Below 15%, and Entry Level Job Access.

Example using “Affordable Housing Demand” metric

- **6.1.a.** Select the specific layer by clicking on the small box next to “Affordable Housing Demand.” The data related to this metric will appear on the map.

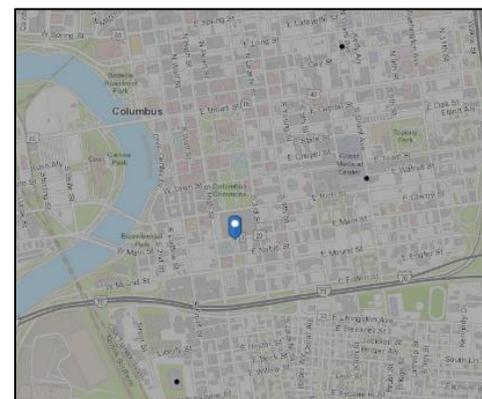

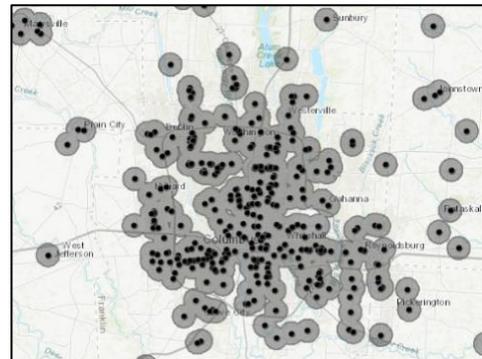

- **6.1.b.** To see the scoring breakdown, click the small arrow to the left of the check box. This will bring the legend into view.

- **6.1.c.** Take a screen shot of your property marker and the layer related to “Affordable Housing Demand.”
- **6.1.d.** De-select the last layer by unclicking the square next to the layer. The map should return to a blank map with only your location marker visible.
- **6.1.e.** Repeat steps **6.1.a** – **6.1.d** for the layers that are relevant to your application.
 - For the Education layer, determine which category you are applying for—Gap closing grade, overall district grade, or performance index grade. Select only the layer that corresponds to your application.

6.2 - Amenity Instructions: For the following layers, you will need to select BOTH the point data and the associated buffer layer: Full-service supermarket, restaurant or cafe, pharmacy or medical clinic, public park, public library, church or religious building, and public school.

- **6.2.a.** Select one specific layer by clicking on the small box next to the point layer (i.e. “Full-service supermarkets”) – a set of points will appear on the map. If you do not see a specific amenity point, please refer to FAQ 2 on page 4.
- **6.2.b.** ALSO select the related buffer layer (i.e. “Full-service supermarkets 1 mile buffers”) by clicking the small box next to the corresponding 1 mile buffer layer. A set of circles will appear on the screen. This provides a one-mile radius for each amenity and shows your proposed location in relation to these amenities.
- **6.2.c.** Take a screen shot of your property marker and the layers of point data and their buffers. This will show if your proposed property is within the buffer shown here.
- **6.2.d.** De-select the last layers by unclicking the squares next to the layer. The map should return to a blank map with only your location marker visible.
- **6.2.e.** Repeat steps **6.2.a** – **6.2.d** for the remaining amenities that you would like to include in your application.

Frequently Asked Questions

1. Where does the data come from?

We use a number of nationally-recognized data sources for each analysis. For more information on the data we use, see the Data Methodology Section below.

2. What if a business near my site isn't listed on the map?

No data set is perfect. This is the most comprehensive data set that we could put together, however, if you find that a point is missing, take the following steps. First, check the “buffer” layer for the relevant type of amenity. It is very likely that even if a specific business is missing, your site will still be located within the 1-mile buffer layer that is provided. For example, one full-service supermarket may be missing from the dataset, but there is a sufficient density of supermarkets near your location to include you within the buffer even if that one point is missing.

Second, check the [definition](#) of the specific amenity to make sure that the amenity you are looking for adequately falls under the definition used. It is possible that what you consider a supermarket or a recreation facility does not meet the requirements outlined in the definitions page.

Third, if you are *not* within the buffer zone but the business you are looking for *is* within the definition, then you will need to submit documentation with your application that demonstrates the business is both within the required buffer and meets the definition of the amenity you are seeking points for. OHFA will make the final determination as to whether the amenity qualifies for points or not.

3. Why doesn't the map I see look the same as a similar map in the OHFA Housing Needs Assessment?

While we use the same data sources for both the HNA and the QAP, the threshold points on this map are specifically tailored for the QAP. While we may use quintiles or natural breaks to determine gradation and color change on the HNA maps, we make sure the thresholds on the QAP map align with the scoring criteria in the 2020-2021 QAP.

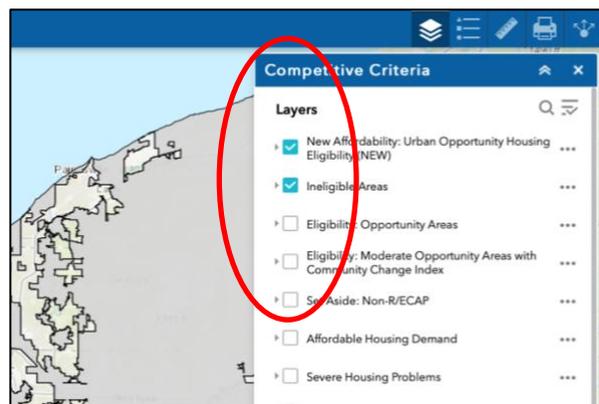

4. Who do I contact if my map is not working?

If your map is not working, first try to switch browsers. Mozilla, Chrome, and Internet Explorer have all been tested with this interface. Second, make sure that you have followed **Step 2** properly – the map will appear blank when you first open it. You must click on the “Content” tab and then select layers in order to see data. If you experience problems after trying those solutions, contact Katie Fallon (kfallon@ohiohome.org) at OHFA.

5. Why does my map appear blank?

The maps were intentionally designed to appear blank when you arrive on the website. In order to access the content, follow **Step 2** in the instructions above.

Step 2: A list of the relevant geographic layers needed for your application will appear when you enter. The layers outlining the eligible and ineligible areas (in gray) for the New Affordability: Urban Opportunity Housing pool will be turned on. If you would like to see how each of these layers

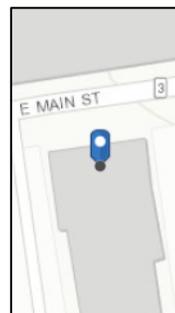

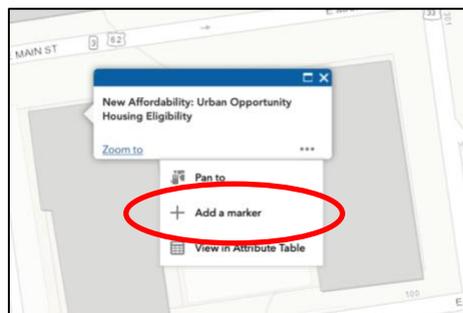

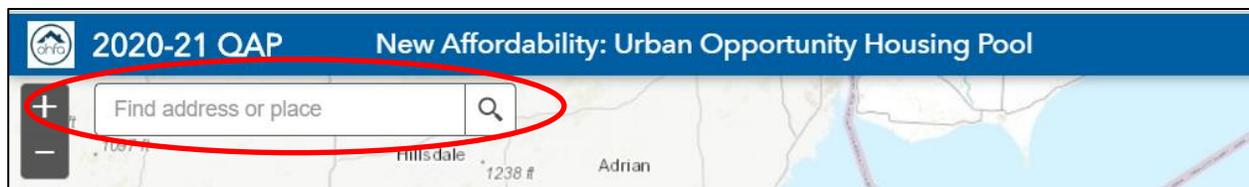

are distributed throughout the state, you can click on the small box on the left-hand side of the name to turn that layer on. For best results, turn each layer on one at a time.

6. What are the buffers?

The buffers are created for each pool to provide you easy visual information about the distance that your proposed site is from the specified amenities in the QAP. When you click on each buffer layer, you will see the geographic distance from the amenities that corresponds to the distance required by the QAP.

7. What if my site does not have an address?

If your property does not yet have an address, turn on the eligibility layer and enter an approximate address or street name into the “Find Address or Place” tool on the upper left-hand side of the website. Please note that this **will not** work if the eligibility layer is turned off. Move the map so that you have located your site and click on the spot where you would like to add a marker. Click on the three dots and select “Add a marker.” This will place a blue marker symbol on your screen.

Data and Methodology

Affordable Housing Demand. This metric is based on the [U.S. Department of Housing and Urban Development, HUD User, Comprehensive Housing Affordability Strategy Data](#). The affordable and available ratio of rental units per 100 VLI (Very Low Income) renters, was created using a definition of as at or below 50 percent AMI and 60 percent. AMI refers to area median income as defined by HUD. Individuals can be categorized as having more than one type of disability. This analysis is done on a tract level. Affordability is based on the common standard that households should not spend more than 30 percent of their income on housing. Rental units are both "affordable and available" to renters in a specific income group if the gross rent meets the 30 percent affordability threshold and they are either available for rent or occupied by households with incomes at or below the defined income level.

Severe Housing Problems. This metric is based on the [U.S. Department of Housing and Urban Development, HUD User, Comprehensive Housing Affordability Strategy Data](#). A "housing problem" indicates a household where housing costs exceed 30 percent of income, a housing unit has incomplete kitchen or plumbing facilities, or more than one occupant per room. AMI refers to area median income as defined by HUD. Individuals can be categorized as having more than one type of disability.

Transportation. TCI is based on the number of bus routes and train stations within walking distance for households in a given Block Group scaled by the Frequency of Service. This is a proprietary metric from the [Center for Neighborhood Technology](#).

This data set measures transit access through General Transit Feed Specification (GTFS) data provided by transit agencies, online transit maps and schedules, and interview / contact with transit agencies. All GTFS data is merged into a proprietary dataset known as AllTransit. A companion online tool facilitates the collection, normalization, and aggregation of GTFS data to analyze fixed-route transit service. CNT has station, stop, and frequency data for bus, rail and ferry service for all major agencies in regions with populations greater than 100,000 as well as a large number of smaller regions and agencies.

Opportunity Index. This index is created by the Kirwan Institute in conjunction with OHFA. There are five categories with 15 total indicators in the 2020-2021 USR Opportunity Index. The five categories of indicators are: Transportation Opportunity, Educational Opportunity, Employment Opportunity, Housing Opportunity, and Health Opportunity. At the core of the 2020 -2021 USR Opportunity Index is the delineation of differences between urban (U), suburban (S), and rural (R) markets. Using advanced methods, grounded in cutting edge academic research, Kirwan Institute built the USR index to simply illustrate differences in built form; differences between different housing types, development patterns, and years built. This component remained unchanged from the 2018 - 2019 USR Opportunity Index. For more information visit <https://ohiohome.org/ppd/opportunitymap.aspx>.

Education. The data for the school districts is taken from the [Department of Education's Report Card](#). This provides district level data on school district performance. While there is variability between schools, we rely on the district to provide an overarching understanding of general region scoring, as there is limited data on school catchment areas, open enrollment, voucher, and lottery districts, which may substantially skew the ability for individual schools to reflect specific geographic regions.

Proximity to Amenities. Proximity data is aggregated from a number of sources to achieve the most reliable and up-to-date reflection of each amenity. For definitions of each amenity, please see the [definitions page](#).

- **Full service supermarket with fresh produce:** Data on supermarkets is taken from a NAICS database that records businesses on an annual basis, and includes establishments listed as groceries, fresh fruit markets, meat markets, specialty food stores, fish and seafood markets. This data is aggregated with super-center data, entailing stores such as Sam's Club and Walmart. Removed from this dataset include Food products – retail, bulk water companies, beverages-non-alcoholic-retail, spices, herbs, and “salt.
- **Restaurant or café:** Data is taken from a NAICS database that records businesses on an annual basis.
- **Pharmacy or medical clinic.** Pharmacy data is taken from a NAICS database that records businesses on an annual basis. Clinic data is aggregated from Health Resources [HRSA data](#) and [clinic location](#) information.
- **Public Park:** Park data is taken from an [ESRI](#) layer package of all USA parks. This includes information on national parks and forests, state parks or forests, county parks, regional parks, and local parks.
- **Public library:** Library location data is taken from the [Ohio Public Library Systems Directory](#) and data from the [National Libraries Survey](#). This includes information for all main libraries and their branches throughout Ohio, but excludes libraries that are private or university or college affiliated.

- **Church or religious building:** Data is taken from a NAICS database that records businesses on an annual basis.
- **Public school:** Public school data is taken from the [Department of Education's Building Report Card](#) and from the [Homeland Infrastructure Foundation-Level data](#). It includes all public elementary and secondary education facilities in Ohio as defined by the Common Core of Data, National Center for Education Statistics, US Department of Education for the 2015 – 2016 school year.
